SWINDLES OF WAITERS.

How Guests at Cafes and Hotels Are Victimized and Deceived.

Said a returned tourist to a reporter last evening: "I see it don't take long for the waiters on this side of the water to adopt European tactics when it is to their personal advantage."

"What, for instance?"

"From long and not unusual experience in cafes in various parts of the world, I have adopted the custom of looking carefully over the itemized bill brought me for my meals and comparing it with the prices on the bill of fare. That is what an itemized bill is for, and not simply to look like a washing list. The other night when dining rather liberally at one of the up town hotels, I remarked a discrepancy as between the account presented and the change returned from the bill I gave the waiter.

"It was only fifty cents short, but I called the waiter's attention to the fact. He seemed astonished and counted the change twice, then, lifting the bill of items from the plate where it rested with the change, his features were spread with a satisfied smile as two quarters of a dollar appeared thereunder. His hilarity disappeared, though, when I told him that I had spent time and money enough in Paris to know that trick well, and always rewarded them there, as I proposed to do with him, by omitting his accustomed fee."

"What is the trick?" queried the reporter.

"Don't you see that by hiding two or three coins under the list in that way when returning the change to a careless man who does not count his change, he would receive his tip and the hidden coin also, but when serving a more careful person, myself for instance, and a recount was called for, the missing coin could be found and no suspicion of dishonesty attach to the waiter, unless a fellow got tired of having the same old chestnut played too often. There are other tricks beside that for capturing the careless," said the tourist. "One that is practiced in France, where gold louis and half louis are the most common coins in circulation, is when the waiter receives a louis he puts it between his teeth, or seems so to do. You see the gold right their in plain sight all the time, but he gives you change for a half louis only.

"You immediately call his attention to the fact and remark that it was a louis you gave him. 'But no, sir,' he says, 'see there,' and takes the coin from between his teeth and behold it is only a half louis. You are puzzled, for you were confident that it came from the little spring case that a half louis would not fit, and can not account for it until you learn that he has had the half louis in his mouth waiting for just such an occasion. The only safe way, therefore, is the moment you see your louis going toward his mouth, let the battle begin, and tell him to let it remain on the table until the change is given. That is not all, for in the supper rooms at the various cafes in Paris the number of the room is placed right over the column of figures and added in with the total amount. I suppose if the room were not numbered they would add in the date; any thing, in fact, to make the amount bigger."—*N. Y. Telegram.*

AN OLD PUNISHMENT.

The Introduction of Tarring and Feathering as a Torture.

Philologists have long observed that mords that are popularly known as "Americanisins" are really good old English terms brought over by the pilgrim fathers, the early settlers on the James, etc., and retained here when forgotten in the country of their birth. Similarly, not a few Dutch words—boss, boodle, etc.—brought over by the early settlers of New Amsterdam, have spread from their original American habitat, till they have become part of our speech. It is not less interesting to note that certain customs, forgotten in their homeland, but retained here, and, therefore, characterized as "American," are really importations from Europe. Not one of these customs has been regarded as more distinctively "Yankee" than the venerable one of "tarring and feathering," and yet we learn from the "Annales Rerum Anglicarum" of the venerable English historian, Hoveden (living in the thirteenth century and Court Chaplain to Henry III.) that the custom is at least as old as the time of Richard the Lion-hearted. He tells that Richard, on setting out on the third crusade, made sundry enactments for the regulation of his fleet, one of which was that "A robber who shall be convicted of theft shall have his head cropped after the fashion of a champion, and boiling pitch shall be poured thereon, and the feathers of a cushion shall be shaken out on him, so that he may be known, and at the first land at which the ship shall touch he shall be set on shore." Whether the custom was earlier than this we have no means of determining. It is at least close on to seven hundred years old.—*American Notes and Queries.*

—Ada—"What was your first meal alone with your husband when you left for the honeymoon?" Elsie (aged sixteen)—"Oh, Charley, let me make it out. We had chocolate ice-cream, kisses, lemonade, blanc-mange, charlotte russe, strawberries, vanilla ice-cream, cocoanut drops, Neapolitan ice-cream, wine jelly, bananas, raisins, tutti-frutti, milk punch, raspberries, floating island, and pistache ice-cream." Ada—"Any thing else?" Elsie (gloomily)—"Yes; a long illness."—*Time.*

ROOST FOR BUMMERS.

Ingenious Scheme of a Milliner to Get Rid of Noisy Loafers.

In this city, in front of the Black building, at the corner of C and Taylor streets, was a loafing place of many years standing. The end of the sidewalk in front of the building is about eight feet above Taylor street, and is guarded by an iron railing made of gas-pipe. It was in this spot that the ragged street philosopher held his court. With his back braced against the railing, he discoursed for hours to half a score of disciples, each similarly braced against the top bar of the railing. Tobacco juice was squirted right and left, and the smoke of black and ancient clay pipes scented the "desert air" far and near. Being some feet above both streets, this corner seemed a little platform railed off and set apart for the special benefit of the class by which it was appropriated, and they long held undisputed possession of it.

Some months ago, however, the room fronting on the platform was rented by a lady, who opened in it a millinery store. She at once discovered that in front of her store was a sort of bummers' roost. She could not expect ladies to run the gauntlet of such a crew in order to enter her shop, therefore she determined to oust them.

Her first attempt was by filling the top bar of the railing with projecting spikes. This made it an uncomfortable resting place, but the force of habit was so strong that the old frequenters of the spot continued to assemble there, nowithstanding the fact that the place no longer afforded them any artificial support.

Although beaten in her first attack, the lady did not give up the fight. She said nothing, but she had a plumber take up the pieces of gas pipe which formed the bottom bar of the railing and drill in it about fifty small holes. She then had this connected with the water pipe inside her store. When this connection was made she had only to turn a cock and fifty streams of water flew out of the bottom bar of the railing, some vertical, others at an angle of forty-five degrees, and still others that swept along the whole width of the sidewalk at lower range.

Thus equiped the lady developed the instincts of a pot hunter. She did not turn loose upon the first two or three bums that presented themselves in front of her "blind," but waited until she had at her mercy a whole flock. Then she pulled the "trigger." The scatterment was such as one sees in turning loose an old blunderbuss into a flock of mud hens. Nearly all broke at once—not standing upon the order of their going—but two or three seemed almost paralyzed by the touch of cold water upon their persons. They hesitated and looked about for some one to swear at, but not a soul was to be seen, and the water still showering down upon their heads and giving them an up-cut from below, they were finally forced to retreat, streaming like as many half-drowned rats.—*Salt Lake City Tribune.*

The Game of Cobwebs.

A new parlor game, originated in the Southwest, has already attained considerable celebrity. It is called cobwebs, and may be played by any number of boys and girls. The players all join hand, in a circle, with a blindfolded boy in the center. He selects a girl, who enters the ring and flutters about just out of his reach, while he attempts to catch her, saying: "Fly, fly, where art thou?" The girl replies: "Here am I," and at the same time she changes her position and endeavors to elude the spider, as the boy is called. In her efforts to do so she must not leave the ring. An artificial spider is suspended from the ceiling by means of a pulley and a string, and it is the duty of the boy, still blindfolded, to drop this spider on the girl's head. When he succeeds in accomplishing his purpose, both he and the girl are debarred from entering the game again. A girl next enters the ring, and, blindfolded, pursues in the same way the one she chooses. The spider who catches his elusive fly in the shortest time is called the winner of the evening, and is presented with a wreath of small spiders. The girl who is longest in being caught receives a wreath of butterflies, which crowns her the "queen fly."—*Golden Days.*

Exchange of Courtesies.

In the early explorations of Japan by the English, before the people there had become familiar with Western ways of living, many amusing things were observed by both natives and strangers. Mr. St. John tells how his party of surveyors opened relations of amity and trade with some callers upon them at time of lunch.

One of my men presented the elder of the two with an empty preserved meat-can, which we had just flung from us. It was a wonderful thing, evidently. How they examined it! They both thanked us, then spoke earnesly together for a few minutes, and away ran the younger, returning in a very short time with a live cock, which the older man took from him, and with many bows and apologies begged me to accept the bird as a return for the handsome present of an empty meat-can. This cock was, I doubt not, almost the most valuable thing the poor kind-hearted native possessed. They are the only time-piece the poorer class of Japanese have, and are, besides, generally very great pets. Of course I did not deprive the small farmer of his fowl, his only clock, and his children's pet.—*Youth's Companion.*

TIMES HAD CHANGED.

A Brief Reading by the Sea-Shore Seven Years After Marriage.

Mr. and Mrs. Jenkins went down to the sea-shore the other day for one of the quiet, happy times they used to have six or seven years ago, before they were wed.

They took with them this time a volume of Tennyson and three little Jenkins's.

"The children can play on the sand while we lie on the soft, green grass and you read Tennyson to me," said Mrs. Jenkins in dreamy anticipation.

"Queen Guinevere had fled the coast"—

began Jenkins, when they had reached the "soft, green grass."

"Tommy, get out of that water! What do you mean wading in so far?

There in the holy house at Almesbury—

"*Willie!* If I speak to you again, young man, you'll stop pouring sand down your little sister's back!

For hither had she fled, her crime of flight—

"Bessie, you and Tommy stop splashing water on each other—stop at this instant:

For thus it chanced one morn, when all the court—

"*Willie*, what on earth are you doing with your hands full of that nasty seaweed? "There, Tommy, I told you you'd let that stone fall on your toes if you'd tried to lift such a big one. Now you mind me next time!

But when Sir Lancelot told this matter to the Queen, at first she—

"Where *are* those children? You hold the book, and I'll go see. There's Willie wading in the water up to his waist again, and Bessie's sitting flat in the wet sand in her white dress. Tommy's drowned like enough. I guess we won't read any more poetry to-day. You, Tommy—*Tom*, where *are* you?"—*Zenas Dune, in Time.*

DISTILLING LIQUORS.

A Process Which in Its Primitive Forms Is Known to All Savages.

Primitive methods of distillation may be found existing in nearly all savage nations. It is probable that some method of distilling liquors existed in the time of Homer; but the strong alcoholic liquors of the present day are a comparatively modern invention. The discovery of alcohol is generally credited to an Arabian physician, Albus Kasem, who lived in the eleventh century. A monk named Marcus, however, as early as the time of Clevis collected the steam from the heated spirit of white wine on wool and squeezed out of the wool a balsam, which is described by writers of the day to have been capable of bringing the dying back to life. Savonarola wrote a treatise on the water-of-life in the fifteenth century which gave a start to the art of brandy-making in France. In 1494 distilled liquors had become such a curse to England that laws were made prohibiting their use. In 1761 spirituous liquors were used to such an alarming extent in Sweden that Emanuel Swedenborg presented several measures to the Diet to diminish the number of drunkards. The Diet finally adopted his proposition to limit the distillation of whisky by farming out the right to distill it to the highest bidder, "that is," he adds after making this suggestion, "if the consumption of whisky can not be done away with altogether, which would be much more desirable for the country's welfare and morality than all the income that could be realized by so pernicious a drink."—*N. Y. Tribune.*

HIGHT OF WAVES.

How High They Have Been Actually Known to Rise in Storms.

The story of waves that run mountain high is a very great exaggeration. Many important measurements have been made, all of which show that the common estimate of the height of waves is due to imagination and fear. The measurements of Scoresby, which are regarded as very accurate, proved that during storms waves in the Atlantic rarely exceed forty-three feet from hollow to crest, the distance between the crests being 560 feet, and their speed thirty-two and one-half miles an hour. More recent observations taken in the Atlantic gives from forty-four to forty-eight as the highest measured waves; but such heights are rarely reached, and, indeed, waves exceeding thirty feet are very seldom encountered. The monsoon waves at Kurrachee breakwater works were found to dash over the wall to the depth of thirteen feet, or about forty feet above the mean sea level. The greatest height of waves on the British coast were those observed in Wick bay—so famous for the exceptionally heavy seas which roll into it—being thirty-seven and one-half to forty feet. Green seas to the depth of twenty-five feet poured over the parapet of the breakwater at intervals of from seven to ten minutes, each wave, it is estimated, being a mass of forty thousand tons of water, and this continually for three days and nights. During severe storms the waves used to ride high above the top of Smeaton Eddystone tower, while at the Bell Rock the seas, with easterly storms, envelop the tower from base to balcony—a height of four hundred feet.—*Chicago Inter-Ocean.*

—A peculiar incident of history is the fact that two Jews of Bagdad have bought the entire site of the ancient city of Babel, the great capital of Nebuchadnezzar. The purchasers are two brothers Effendi, one of whom was elected member of the Turkish Parliament which convened in 1878. It is remarkable that two Jews have become the heirs of the gardens of Semiramis and the palaces of Nebuchadnezzar, or what if left of them.

ORGANIZED THIEVERY.

A Peruvian Company Whose Object Is the Plundering of the Dead.

A limited liability company has been formed at Mellendo, with a capital of $40,000. It is called the Compana Anonima Exploradora de Las Huscas del Inca, and its business is to be the searching of the old burial grounds of the Peruvian Incas, for buried treasure in money or other valuables. It has received a concession from the Peruvian authorities, and proposes to go at its work in a systematic, business-like fashion. The field of the company has been pretty well worked over already by the horde of hap-hazard plunderers from all parts of the world, who have flocked to Peru from the times of Pizarro till the present day, but there are yet some very substantial legends of buried wealth that has not yet been discovered. Under the old Castle of Cuzco, for instance, Felipe de Pomanes tells that there is a vault containing figures of all the Incas wrought in fine gold, and that in his own day they had been seen by a certain Dona Maria de Esquevil. She, the story goes, was married to a descendant of the Incas, and reproached him with being too poor to support her properly. This, at last, so irritated him that he led her blindfolded through many winding passages into a room where she saw wealth such as no mortal ever dreamed of, and asked her what she thought of that for a poor man's nest-egg. When Humboldt was exploring in the neighborhood of the Temple of the Sun, at Cuzco, a poor lad, a descendant of the ancient kings, told him the story, which is still current among the Indians, that the golden chair of the Incas was sunk in the baths at Pultamarac, and that there are gardens with artificial trees of the purest gold beneath the temple. These gardens, by the way, are mentioned by the earliest historians of the Conquest. Humbolt's lad, when asked why he did not seek for this hidden treasure, said that it would do him no good if he found it, but would only cause his neighbors to hate and injure him. "We have a little field," he said, "and good wheat." That contented him. This same spirit seems to have animated all the descendants of the ancient race of Peru, and encourages people like those who have just put $40,000 into the Society Exploradora to hope that only a part of the ancient treasure has ever been discovered. It is alleged that the Indians can generally get gold when they actually need it, as at the time of the rebelion of Pumacaqua, in 1814, when, according to the story of an old woman of the Astete family, told to Mr. Markham some thirty years ago, her father having been a colleague of Pumacaqua and present at the time, Pumacaqua entered the council chambers laden with gold and dripping wet, from a journey he had made up the bed of the Huatanay to a cave filled with golden figures. It was always believed then, according to the historians, that the rebel chiefs had some such store to draw upon; and it is certain that after his final defeat Pumacaqua offered the thieves a pile of gold bigger than that of Atahualpa, the ancient chieftain, as a ransom for his life. The offer was declined, and he died with the secret unrevealed, at least to his conquerors.

This Atahualpa, it is a matter of history, when in captivity, offered a room filled with gold as a ransom, but Pizarro demanded double the amount, and the Incas agreeing, sent messengers all over the kingdom to bring it. These messengers, on their way to the capital, heard that Atahualpa had been strangled, and they threw down their loads of gold, and, it is said, buried them somewhere in the mountains of Llanganati, to the northwest of Quito, though no search has ever revealed the spot. Then there is the golden chain of the Incas, every link as thick as a man's arm, and its length so great that it went twice around the great square of Huacapata, and which is said to have been thrown into the deep lake of Urcos to save it from the Spaniards. There can still be seen a drift which the Spaniards started through the mountains to drain the lake, but which was never completed. While these and similar legends do very well to fire the ardor of dubious investors in the stock of the Society Exploradora, it is highly probable that the actual work of the company will be in the less romantic line of digging up the bones of ancient inhabitants for the sake of the trinkets which may have been buried with them. This sort of petty thievery is less attractive to the imagination than the exhumation of forests of golden trees and conventions of golden Incas, but it will probably pay better in the end.—*N. Y. Sun.*

Village Destroyed by Ice.

Advices from the fishing village of Kerschkaranza, in Kola, a peninsula on the White Sea, describe a wonderful phenomenon, new in Arctic annals, which took place on January 5 last. At four o'clock in the morning the inhabitants were awakened by a series of heavy, dull detonations, like heavy artillery. Shortly afterward a great ice wall to the northwest, several hundred feet high, was seen to be moving toward the village, doubtless in consequence of the pressure of the ocean of ice outside. The ice hills came slowly but irresistibly onward, and passed over the village, which they completely erased, and kept onward for a mile inland. The ice traveled a mile and a half in four hours. The villagers saved their lives, but little else.—*Philadelphia Press.*

HIS MASTER-PIECE.

How Flanagan Flanagan Got Three Hundred and Fifty Dollars for Eleven.

This is the age of barn-door art—that kind of art which represents a powder-horn, a rabbit and a lot of other things hanging against a barn door in such a way that no one would suppose they were painted at all, but were really hung there.

Over such a picture some people go wild with joy. The naturalness of a nail-head, or the folds in a felt hat carry them away, and make them feel better satisfied with themselves and every thing else.

Flanagan Flanagan had painted many a landscape, to which he conveyed the subtle impressions made upon him by nature. You could feel the crimson leagues of calm in his twilight marine as keenly as you could the musical rustle of his silver birches.

But so great was the rage for photographic painting that Flanagan Flanagan, in spite of his self-respect and professional pride, felt that he would for once have to give the public what it wanted, because he was in need of the ever potent shekels of silver that enable a man to step out into the gloaming through the front door, without stumbling over the wolf.

So Flanagan Flanagan sent a canvas, representing an old one-dollar bill slightly crumpled, to a well-known annual exhibition.

The papers began to rave over it in half-column notices. People who went to the exhibition stood and looked at this canvas, as they looked at no other.

"How natural the eyebrows of Washington look," said one enthusiastic young lady; "and the lace on his collar is just perfectly lovely!"

"I never saw any thing like that before," said a bald man, who looked first at the canvas and then at a one-dollar bill which he held in his hand; "now that's what I call painting."

And so it was with every one. One would become entranced with the hair lines, and another over the signature of the Secretary of the Treasury in the lower corner.

After a while it was so much talked about that it was considered the proper thing to see, if only to be in fashion.

Flanagan Flanagan ran the price up until it reached three hundred and fifty dollars, and it was nip-and-tuck between three bar-rooms, four prune merchants and several capitalists to see who should secure the prize.

There is nothing like barn-door art for the United States of Chicago," said Flanagan Flanagan to a brother painter at the fifty cent table d'hote a day or two later; "they don't want the 'Keene Valley,' or the 'Murmurous Megalloway,' or 'Near Gloucester,' or 'Twilight's Soothing Hush,' or any thing that breathes nature in every line. They want pictures of beer bottles hanging on antlers, or any old vest painted in such a way that the buttons look as though they were about to fall off. They will go wild over a neatly painted grease spot on the lapel, or a buckle showing the steel through the japanning. After awhile, instead of visiting Milford or the coast of Maine in summer, we shall all be making studies for future triumphs in old junk shops and second-hand clothing stores. The banjo is our national instrument, and we must paint to suit banjo people."

"But did it not cost you a good deal of patience?" inquired his friend.

"Not a bit," replied Flanagan: "it only cost me ten dollars for the frame, stretcher and all. The one dollar bill was a genuine one, ingeniously stuck on the background of gray paint. That's how I got three hundred and fifty dollars for eleven.—*Puck.*

IN CASE OF FIRE.

How It May Be Confined to a Single Room for Some Time.

In a lecture before the Society of Arts, London, Mr. A. W. C. Ghean gave the following concise and simple directions how to act on the occurrence of fires. Fire requires air; therefore on its appearance every effort should be made to exclude air; shut all doors and windows. By this means fire may be confined to a single room for a sufficient period to enable all the inmates to be aroused and escape; but if the doors and windows are thrown open, the fanning of the wind and draught will instantly cause the flames to increase with extraordinary rapidity. In a room a table cloth can be so used as to smother a large sheet of flame and a cushion may serve to beat it out; a coat or any thing similar may be used with an equally successful result.

A wet silk handkerchief tied over the eyes and nose will make breathing possible in the midst of much smoke, and a blanket wetted and wrapped around the body will enable a person to pass through a sheet of flame in comparative safety. Should a lady's dress catch fire, let the wearer at once lie down. Rolling may extinguish the fire, but if not, any thing (woolen preferred) wrapped tightly round will effect the desired purpose. A burn becomes less painful the moment air is excluded from it. For simple burns, oil or the white of egg can be used. One part of carbolic acid to six parts of olive oil is found to be invaluable in most cases, slight or severe, and the first layer of lint should not be removed till the cure is complete, but saturated by the application of fresh outward layers from time to time. Linen rag, soaked in a mixture of equal parts of lime water and linseed oil, also form a good dressing. Common whiting is very good, applied wet and continually dampened with a sponge.—*Philadelphia Press.*

—All foundations for farm buildings should be built before frost, in order to avoid injury. It requires time for a foundation wall to give off the water in the mortar, and a heavy frost may damage the wall

SECRETS OF THE TOILET.

Directions for Preserving the Eye-Lashes and Eye-Brows.

The care of the eye-lashes is too little thought of or understood, though they are indispensable to the beauty of the eyes and greatly to the general charm of the face. Long, even lashes are very rare among us, paticularly after the age of thirty, while Eastern beauties very seldom lack them. The mode adopted by them is the one we are so familiar with as regards our hair—the clipping of the split ends with a pair of scissors about once a month. This never fails when tried on a child or young person. The eyes should be closed while the operation is being performed and the scissors used cautiously. This lengthens and strengthens the lashes, which often have a tendency to break or fall out. This tendency may arise from different causes. If the eyes are sticky or gummed together bathe them for several minutes in tepid milk and water. Rubbing makes the lashes fall. Again, many people are troubled with a greasy secretion that lies on the lids and destroys the lashes. In such a case the following mixture is recommended:

Borax, four grains; sirup of quinces, one drachm; black cherry water, one ounce. Mix and bathe carefully. To check the secretions, annoint nightly with sweet oil.

The eyebrows are almost as much neglected as the eye-lashes, and that, too, by persons by no means indifferent to their appearance. They should arch slightly, be rather abundant and lie smoothly. To the latter end they should be moistened slightly with water and cologne and then combed. To prevent the falling of the hair of the brows one of the following recipes is recommended:

1. Apply almond oil at night on retiring and bathe in the morning in tepid water.

2. Five grains of sulphate of quinine and one ounce of alcohol. This wash is also good for the eye-lashes. It should be applied to the roots with the finest sable brush.

3. Bath the brows three times daily in a wash composed of nine grains of borate of soda, one gill of distilled water and ten drops of escence of mint. This will also check any tendency to extreme moisture.

4. Shave and apply sweet oil.

5. Mix one gill of water, one ounce of glycerine and nine grains of chlorate of potassium. This receipe is a cure for dry, crusty pimples in the brows. It should be applied lightly with a soft tooth-brush.

A correspondent gives the following as the result of study and experience in the secrets of the toilet:

"For a greasy skin" use finely powdered gum benzoin and bay rum in solution, or wash the face in sweet milk or liliantus water without using soap.

"For blackheads" a solution of sulphite of soda and water is excelent.

"For a rough, dry skin" nothing can be more simple and effective than a weak solution of carbolic acid (one part carbolic acid, fifteen parts water), and where pimples occur, even as in acne, the most obstinate of all skin troubles, the occasional use of a powder made of alum, borax and cream of tartar (equal parts) will prove an effective remedy.

Glycerine in any form applied to the skin for any length of time will harden and darken the cuticle, and will finally affect the normal functions of sebaceous ducts, which functions are essential to a healthy and clear complexion, likewise any astringent minerals, such as zinc, lead or arsenic, will by reaction injure, unless the skin is attacked by some malignant form of disease, in which case it is better to consult a physician.—*N. Y. World*

How the World Is Fed.

"Even the oldest and best informed man in the trade," said an experienced salesman in the grocery business, "can not begin to tell you any thing about the wonderful extent of the traffic in food. Figures don't seem to express the thing so that any body can realize how enormous the business is. Now every body knows that corn makes only a small part of what any body eats. I mean by that, nobody eats corn enough to make it a principal article of diet. Yet there is one establishment in Maryland—a corn factory, they call it—where there are thousands of cans of corn a week put up and sold. Now, consider that this is only one establishment out of hundreds in this country, and thousands in the world, where food is put up in cans. Then think that corn is only one small item of food even among the canned goods. And then remember that canned goods are merely a fraction of the food supply, and you will be ready to acknowledge that the food industries are too great to be readily grasped by the imagination. More than three-fifths of all the workers of the world are engaged wholly in raising or handling food."—*N. Y. Mail and Express.*

—A young Australian near Bochara, after an unusually hard day's work sheep shearing, went to sleep on the sitting-room couch after supper. Soon he arose, walked out into the darkness, went through four gates, which he carefully closed, to the woodshed, and then hung up his coat and took down his sheep shears and sharpened them. Then he caught a sheep and had just finished shearing it when some of the household came with a lantern. Then it turned out that he had been asleep all the time, and the light of the lantern awakened him. The sheep was sheared as well as though it had been done in broad daylight.

IF WE COULD KNOW

If we could only always know
The heart of him we think our foe,
What love and pity we had shown!
If we had known
The circumstances of his life,
His good resolves, his inward strife!
How tender then our hearts had grown
If we had known!

If we could know that when we pray
God hears and heeds each word we say,
And pities us, and loves us so—
If we could know,
O! what sweet rest the heart would feel!
What sense of rest would o'er us steal!
What loving words from hearts would flow
If we could know!

If we had known while on life's way,
With loved one walking day by day,
Death's shadow hovered 'round our home—
If we had known,
How we'd have sheltered that dear head!
And unkind word had ne'er been said,
How sweet our smile! how soft our tone
If we had known!

If we could only know to-day
That loved ones who have gone away
Still care and love on us bestow—
If we could know
That those who loved us and have died
Are sometimes standing by our side,
Life's journey then with joy we'd go
If we could know.

—*Mrs. M. S. Sutton, in Inter Ocean.*

HOW TO BE HAPPY.

An Interesting Bit of Advice Imparted by Professor Blackie.

Never whip your brain. All high pressure is dangerous. Study to think as easily and as quietly as you breathe. Never force yourself to learn what you have no talent for. Knowledge without love will remain a lifeless manufacture—not a living growth. Be content to be ignorant of many things, that you may know one thing well, and that the thing which God specially endowed you to know. It requires fire to fuse the materials of thinking, no less than to melt the iron in the foundry.

But remember this—however strong you may be, physically, to strike a blow, and however sharp, intellectually, to recognize a fact and discern a difference, your success in the game of life depends on the serious culture which you give to the third formative force in human character—your moral nature; and of the rightful supremacy of this element the comprehensive expression is found in the single word, love. On this all prophets, poets and philosophers are agreed. St. Paul says: "Love is the fulfilling of the law." Burns says:

The heart's aye, the part aye,
That makes us richt or wrang.

And Goethe more largely—

The bazar on splendid trash,
Tempts the buyer to spend his cash.
He who goes to learned college
Comes home crammed with empty knowledge;
But if true bliss you wish to brook,
Learn to live in quiet nook;
If your every vein you strain,
To fill the mind with various lore,
'Tis well; but how to use your lore,
The better wisdom—this to gain,
You must knock at another door.
Nor have you far to search and seek;
Let the God within you speak;
Love all things that lovely be,
And God will show his best to thee.

How is this? For two plain reasons—(1) because it is only by loving or sympathetically laying hold of that which is good in others, that we can enlarge the narrowness and enrich the meagerness of our individual selves; (2) because without love a man is a self-confined mortal and can not stand in any co-operative relation to a social whole, composed of mutually dependent parts. Therefore, let every man measure his value as a social unit not so much by his power of knowing, as by his capacity of loving. Love, no doubt in a reasonable world, must always be accompanied with knowledge; love with knowledge is wisdom; but it is better for all parties in the social system to have much love with little knowledge than to have much knowledge with little love.

But how is love to manifest itself? In the simplest way possible. By carrying out in practice what, as an ethical thinker and a Christian, you must believe in theory; by treating every man as a brother—as good as yourself, and perhaps a little better. Stamp out that bias of mind, so natural to all finite creatures, which leads them to overestimate their own good qualities—real or imaginary—and underestimate those of their neighbor. Avoid criticism, especially that species of it which delights in finding faults. Seek in all things to enjoy what is good, and let the evil drop; and, if you will judge, begin with yourself, following Schiller's rule: "Judge yourself severely; your neighbor leniently." Further, seize every opportunity of performing acts of kindness, however small, to your fellow-beings, especially to your inferiors (Rom. xii., 16). Be like the sun, ever-giving and ever-dispensing, witching blossoms out of the buds, by the light and warmth of its rays, and even, as Shakspeare has it, kissing carrion without offense.

Love, in its common form, exhibits itself in an interchange of kindred sentiments and kindly deeds among equals; when directed towards inferiors, it is elevated into reverence, and culminates in worship. There may be much amiability, but no true greatness of character without reverenee. As we gain a notion of the grandeur of the physical world by looking from the low ground up to the sky-cleaving chains of the Alps or the Andes, so our measure of moral greatness grows by the admiring contemplation of what is above us. This is what Plato meant when he called wonder a philosophic affection. Though any fool may gape at an air balloon, the man who does not cherish a habitual wonder for the grandeur of the universe is like a deaf man who does not hear the thunder, or a blind man who can not see the sun.—*Young Man.*

—In Denmark girls are trained to agriculture, but in America they take more kindly to husbandry.—*St. Paul Globe.*

A LAND OF ROMANCE.

Luxuries of Life in Paraguay—Bevies of Beautiful Women.

Paraguay is surely one of the most favored lands on earth. There no insane love of gold compels the heart to questionable deeds. No political situation harasses the mind. The very atmosphere breathes peace. The air is soft and balmy, inviting to repose, and prolific nature, throwing about everything her garment of rich vegetation, supplies man with all he needs and beautifies all that his eyes rest upon. Paraguay is, indeed, almost a fairy land of romance, so beautiful are its manifold attractions.

The native portion of the population is a remnant of the tribe of Guarani Indians, one of the loftiest tribes in the grade of civilization of all the American race. But nothing astonishes the visitor to Paraguay so much as the vast preponderance of the female over the male population. The proportion is something like nine to one. This is the result of a long and very fierce war, in which the Guaranians followed and supported a cruel and ambitious ruler through indescribable hardships and sufferings. This war ended only with the death of the man who waged it, and has reduced the whole population to about one-sixth of what it was twenty years ago, leaving only women and boys. These women (this writer continues) are as beautiful and fair to look upon as can be found in any part of the world.

They are of medium height, rather slight and lithe, with finely molded limbs, small, pretty hands and feet and figures of matchless grace and beauty that would serve for models of the sculptor's art. Their carriage is so easy and natural as to be almost the poetry of motion, for the freedom from high heeled boots and tight clothing has left their step light, supple and strong. Their dress is of the simplest form; a short tunic or robe not unlike a skirt falling to below the knees and a shoulder covering not unlike a shawl—both of pure white and adorned with pretty native lace. They are gracefully worn, and bewitchingly serve to half reveal and half conceal the form beneath. In the midday siesta they are fond of lying languidly in their hammocks, sipping their mate and singing in their low, sweet voices, yet sad and with a touch of melancholy, the "marucaros," or songs of the orange gatherers, or those other strange, weird songs of theirs, whose words are all of love. Indeed, what need to do ought else in a land so blessed as theirs?

Living entirely upon fruits and vegetables that are secured with but little effort, unmoved by the ambitious schemes of the money making Europeans, upon whom they look with questioning wonder, and possessed of languid, voluptuous natures that are fostered by the climate, what else should they do save love, and dance, and sing? Dancing is their only pastime, and into that they throw the whole spirit of their joyous nature. The slightest excuse is all that is necessary for getting up a ball, at which the whole neighborhood at once assembles.

The girls and women are dressed only in the robes described. The men wear white linen trousers and red ponchos. The dances are in quaint, original figures, but nearly always very graceful. Sometimes the festivities will be kept up through the entire night, after which the participants will gayly return to their occupations, of whatsoever nature, always contented, always happy. Sometimes there will be a grand contribution picnic at some distant point, where the dancing will be kept up the round of a whole twenty four hours. For truly these people live but to be happy through the livelong day.

After reading this one is not surprised to hear that many visiting Europeans, Englishmen among the rest, have settled down in the country. "Who would not rather become a lotus eater among the lotus eaters, and settle down upon the sunny hillside or shady river banks, amid fragrant and fruitful orange groves, to forget a regretted past and live only in the happy present, waited upon by the simple white robed Indian woman—devoted, affectionate and surpassingly fair?" —Boston Transcript.

The Successful Man's Methods.

The clever person is always practical, always adaptable, always and unchangingly clever. He never misses his chance. Like Coleridge's raven, who "picked up the acorn and buried it straight" and came back and dwelt there when "the acorn was grown to a tall oak tree," the clever man lets no opportunity escape. Men who do not see the acorn or do not heed it are left to grumble in old age because there is no tree to cover them. There are hundreds of chances in a man's life, and clever people grasp them at once and turn them into substantial blessings. Genius too often misses its chance, and is sublime, but a failure. But the man of tact misses nothing, quarrels with none, enjoys life to its latest breath, and, perhaps because of his success, leaves a sweet remembrance to blossom after him.

This is what most people call luck. Grant saw his chance in the late war and grasped it; Lincoln saw his opportunity in the great debate with Douglas and seized upon it, and the world, looking upon their early struggles and drawbacks, are apt to call them lucky. Men who heard the first faint sigh for mustard, cod liver oil, pickles, sewing machines or hair wash have enriched themselves by their practical adaptability to the needs of mankind. Talent and genius are usually mighty uncomfortable to live with, but cleverness goes with the stream and gives us what we like best and what we want. It comes in a white flannel suit in summer and muffled up in furs and on skates in winter. This is the kind of people—and the only kind—to invite to your house to bring their trunks and spend a week or a year.—Berkeley in New York Mercury.

The Popularity of Pictures.

What will be the result of the popularization of the picture? Will harm or good follow, from an artistic standpoint? It seems reasonable to assume that good must come. The newspaper cut is laid before the eyes of thousands daily, who would otherwise take no interest in pictures of any kind. In the columns of their daily paper or their weekly journal these thousands must in time grow to look upon a picture with increased interest, and to value it as expressing an idea, a sentiment, more clearly and forcibly than types can do this. The child, familiarized daily with pictures, must grow to be an adult to whom a picture is a necessity. As a consequence he becomes a judge of pictures and a patron of art, though it may be an humble way. In time real art is the beneficiary. The entering wedge to this state of affairs is the newspaper cut.—Pittsburg Bulletin.

London now has several lines of halfpenny "buses," which connect with the various horse car lines.

WHITELEY'S PLACE.

A VISIT TO THE "UNIVERSAL PROVIDER" OF LONDON.

One of the Wonders of the World of Trade—The Famous Bon Marche of Paris Outdone—A Whole Congeries of Stores.

Whiteley's establishment is one of the wonders of the world of trade. Comparatively few Americans visit it, as it is far away from what is known as the American beat—i. e., from the Langham hotel to the Metropole. Compared to the trade kingdom over which a single proprietor, William Whiteley, rules, such mere overgrown dry goods stores as the Louvre and the Bon Marche in Paris are but simple affairs. Whiteley's is not a store, but a whole congeries of stores, each as accessible to but as distinct from the other as the dining room is from the parlor on a floor with folding doors. What in the usual run of dry goods stores occupies a counter or at most but a room—such as the silk department, the linen department, the costume department, etc.—has at Whiteley's a large and imposing store to itself. The jewelry store is a superb establishment, the furniture house is magnificent; china, glass, ironmongery, dressmaking, sewing machines, coiffures, toys, Japanese and Indian curios, each and all have stores devoted exclusively to themselves, large openings giving communication through the entire series of establishments.

ADDITIONAL ESTABLISHMENTS.

This would be wonderful enough, but there are surprises at Whiteley's; a provision store of extensive dimensions adjoins an excellent restaurant, the restaurant leads into the aviary, conservatory and live stock establishments. There is a well supplied wood and coal office. Pianos are upstairs in a store of their own; near them is a large hall, decorated with flags, statuary, tables and chairs in profusion. Here a dinner of several hundred covers may be given, or ordered for any place, town or country, with every accessory, from the banquet itself to the waiter who serves it; all provided by Whiteley. I had nearly forgotten to name a charming picture gallery, where many original works of great beauty are displayed, and where orders are taken for copies of any masterpiece on the walls of any of the great galleries of Europe. Whiteley is also a banker. You may buy or sell money on his premises. You may take your passage by any steamer for any port. You may hire a servant; bury a deceased friend; put your belongings up at auction; purchase, sell, build or take down a house. In short, there is not a single transaction in life relating to trade which Whiteley is not willing to make for you. No wonder he calls himself "the universal provider." Such a business as Whiteley's must speedily make a man a bankrupt or a millionaire; and as disaster has not overtaken him, it is presumed that Whiteley has a good account at his own and other banks. His establishment has suffered frequently from fires, whose strangely persistent recurrence irresistibly suggests incendiarism.

In the matter of cheapness I find very little difference between Whiteley's and other establishments which are not especially devoted to wealthy customers, as are Gillow's in the furniture line, and Lewis & Allenby in the dry goods. An honest price prevails, and if an American visitor sees anything he or she likes at Whiteley's, I would advise him or her to purchase it without further ado, as it would be a waste of time to run all over London to try to find the same article at a lower price.

AT THE BON MARCHE.

For one American who has heard of Whiteley's in London, ninety and nine have heard of the Bon Marche in Paris. Persons who know no other single word in French are aware that bon marche means "cheap." This famous store is indeed a marvelous place. Outside of a few little knickknacks known as articles de Paris, the vast establishment is entirely devoted to the sale of dry goods. No wonder the American woman, with her national love for shopping, revels in hours spent in flitting from one counter to another. Gloves are to the right of her, flowers to the left of her, silks are in front of her, lace is beyond. Are these beautiful things really, or only in appearance, cheap? Why, the truth is they are sold at the market price. Examine well anything that is offered below the current rates, and you will discover a reason.

I will call the attention of American ladies to a custom which prevails at the larger shops in Paris, by which our countrywomen are misled, though no deceit is willfully put upon them; it arises simply from a difference of custom between the French and American merchant. When a price is seen upon a remnant in America, the purchaser knows that the marked figure is the price of the whole remnant, while in France the marked figure means per yard or rather meter, according to the French measurement. Thus, if an American lady sees some attractive pieces of lace or silk, marked variously from $2 to $10, and decides to take some or many of these remnants, it comes, as a very disagreeable surprise, to find out that the articles were at so much per yard, and that the shopkeeper will now measure the yards. Often the price is but a few sous reduction per yard on the original figure asked, and the purchaser finds herself with awkward lengths of goods she was tempted to buy only in the Mrs. Toodles spirit. To be sure, at the Bon Marche the privilege is given of exchanging articles which a purchaser may be dissatisfied with—if no harm has come to them. Even money is, under certain circumstances, returned.—London Cor. Boston Transcript.

A Prevailing Masculine Fad.

A prevailing masculine "craze" is for each man of fashion to wear a distinctive flower. This is a notion from "across seas." The Emperor Frederick wore continually, in his buttonhole, a modest cluster of violets, just as his father was always decorated with the corn flower. A well known society man of today is never seen without a single ivy leaf on the lapel of his coat, and another wears, invariably, a white rose, so small as to be barely noticeable. By fall it is prophesied that military fashions for men will be the rage. This is also a "fad" borrowed from our foreign cousins, who are sporting extensively what they term "La Revanche" styles. The carnation, the emblem of "glory," glows in triumph on the breast of every patriotic Frenchman.—Table Talk.

At the club.

"Jack's just finished a letter to his fiancee."

"Yes, and it was so soft you could hear it swish around in the envelope."—Town Topics.

Their Bearskin Hats.

The London Foot guards are troubled over the threatened abolishment of their showy bearskin hats, which are worn at present by three of their brigades. The supply of bearskin has diminished exceedingly of late, so that now each hat is worth about $38. These bearskins are practically useless, except for the purposes of display, and are even then only suited for cold climates. But they are highly cherished by the soldiers on account of their imposing appearance.—Philadelphia Times.

A Balloonist's Big Jump.

"I have made," said Professor E. D. Hogan, "163 ascensions and three jumps. One jump, made out in Jackson, is the biggest on record—9,800 feet. I shot down 400 feet before my parachute opened. The popular impression is that the parachute opens with a snap, but this is not so. First one section opens, then another, and so on by easy degrees, and as I've watched it opening when it was just above me and was thousands of feet up in the air it reminded me of a rose opening in the morning.

"How did I feel when I made my first jump? Oh, well, rather afraid. I looked down and saw the hills and fields away below me, and the people looked barely a foot high, and the buildings looked like toy houses. I looked down and shivered when I saw the space between me and the earth, and then looked at the barometer and found the distance to be almost one and a half miles; but all the same I jumped. I leaped into space hanging to the parachute, and down I went like a shot for 200 feet. The parachute then began to open, gradually lessening my velocity. I heard the people's applause very faintly. It rose up to me like the merest suspicion of a sound. I afterward learned they clapped and cheered for all they were worth. The parachute was oscillating somewhat, and I came near being banged against several chimney tops. The buildings are our greatest terror. Many an aeronaut has been dashed against a building and killed—more, in fact, than being dragged over rugged ground. I met with one accident. See here," pointing to a big bulb on his right ankle. "I got that in Nebraska in August of 1883 by being dragged over a heap of rocks. I never could bend that ankle since—can't even stand on that foot alone.

"You see a great panorama from a balloon in mid air," continued the professor, "but, of course, the landscape is all in miniature and through a slight haze."—New York Evening Sun.

The Child's Voice in Singing.

Frederick S. Law, in The Voice, dwells at length on some of the dangers of allowing children to sing in public, particularly when under the care of ignorant or irresponsible conductors. One case is mentioned of a girl who was permitted to sing in halls large enough to test the powers of experienced artists, and who, consequently, at the age of 16, although she had started out with great promise, had no voice at all left. "It is," says Mr. Law, "as much of an impossibility for a child to produce full and sonorous notes as it would be to load it down with heavy weights and expect it to walk at once. Many who would regard the latter as an act of cruelty will listen with complacency to a child straining every nerve to fill a large room with a voice that from its nature is not intended for such use."

Mr. Law concludes: "The instruction of children, as regards the voice, should be almost entirely negative—that is, they do not require teaching what to do so much as what not to do. They may be trusted to form their tones as they please, if they do not sing too loudly nor with any undue effort. If these conditions cannot be secured, they should not be allowed to sing at all. Nothing is more painful than to hear a child struggle to fill a large room with a voice crippled from an attempt to wrest from nature what is not there. In no way can we find compensation for such an exhibition. The mind receives no pleasure, as there can be no intellectual grasp of the subject, while the ear is tortured by shrill and distorted sounds which awaken a natural anxiety for the child's future welfare. A healthy child possessed of a good ear is the most natural singer in the world, because the most unconscious. It is only when tampered with by those who should know better that disastrous results are to be feared."—Brooklyn Eagle.

Description of a Turkish Dinner.

Rousseau has said that from the food of a nation you can tell its characteristics; if this is true, no better spot for the study of ethnology could be found than Cavalla. Doubtless, if it be desired, an opportunity will occur of dining with many nationalities. By all means accept an invitation to dine with a Turkish pasha. I had the pleasure of taking a meal with the governor of Drama, who is passing rich for a Turk, seeing that he rules over the plain where the chief tobacco crops are, and his opportunities for amassing wealth are many and varied.

Silence and expedition are the chief characteristics of a Turkish meal. The table preparations are few, but the dishes are many; olives, caviare, cheese, etc., are dotted about, and perhaps as many as ten dishes are handed round on covered brazen dishes, consisting of rice or barley, meat or boiled fish, cakes seasoned with vegetables, roast lamb, beans, a species of rissole wrapped up in vine leaves, the inevitable pilaf and fruits, and, as wine is forbidden, an intoxicating substitute is found in liquors and brandy. Each person has his glass of sherbet by him, and his piece of unleavened bread, for the Turks love half baked dough. It will comfort the European to see every one wash his hands before his meal, for forks are unknown, and each is expected to dip his fingers into the savory morsel as it is handed to him. During the whole of the feeding process scarcely four or five words will be uttered, and at the most your repast will last twenty minutes, but then afterward, with the coffee and the hubble bubble, conversation will flow freely. To the Turk eating is a serious gastronomic exercise, which will not admit of any conversation being entered into during its progress.—Cornhill Magazine.

Can Your Boy Swim?

Can your boy swim? No? Then do not trust him in any sort of boat until he has learned the art, and feels as much at home in the water as upon dry land. You might just as well send him out alone into a crowded street before he had learned to walk. He might possibly creep along all right, and reach home alive, or somebody might pick him up and care for him, but the chances would not be in his favor. So in boating, the boy who cannot swim may get along very comfortably for a while, and not suffer from this defect in his education, but the time will assuredly come when he will have cause to bitterly regret it. It is one of the simplest things in the world, too, and can be learned in three or four intelligently directed lessons, such as can be had in any city swimming school or from the experts in any country village. By all means talk swim to your boy before you talk boat, and stipulate as one of the conditions of his having a boat that he shall first be able to swim a quarter of a mile without resting.—Harper's Young People.

Sighing for Union Square.

"The world is mine," exclaimed the tragedian, in "Monte Cristo," and the comedy man waiting for eight weeks' back salary, murmured faintly: "Cut me off a piece of New York, please."—The Idea.

Suggestion for Railway Companies.

The Boston Transcript wants to know why railway companies do not hang up in several prominent places in stations a plainly printed list of fares to different places. This would save a great deal of time, as many passengers could have the exact amount of money ready. In fact, in large stations like those in this city, a money changing office in addition to the ticket office might be established, so that people could provide themselves with the exact change if they did not have it.—New York Tribune.

Remarkable Change of Climate.

The British consul at Bussorah, on the Persian gulf, in his last report states that a remarkable improvement has taken place in the climate of the country round Bussorah, with the substitution of date and wheat cultivation for that of rice. The malarious fever, to which Bussorah gave its name, is now comparatively rare; and sallow complexions and worn looks, which some years ago were universal, are now no longer seen. The northwest wind, which prevails in the hot weather, instead of being moist and clammy, as it used to be, is dry and hot. The month of September, when the marsh which is formed yearly by the overflow of the Euphrates is drying up, is still the least healthy season. December and January are cold, July and August are intensely hot. The rest of the year is very much like the spring and summer of southern Europe. —Boston Transcript.

His Eye Got Too Hot.

Glass eyes never produce irritation or become painful except when exposed for a long time to a strong flame. This is strictly prohibited. A very amusing instance came under my notice some time ago. A horse dealer, who visited a well known auction and salesroom in this city, purchased a horse, which, to all appearances, was a model of symmetry and perfection, but two nights afterward, while standing in front of a lamppost on Broadway, he suddenly became restless, and darted through the streets in great fury. When stopped his owner became alarmed on discovering the animal's eye blazing hot, but further investigation laid the swindle bare, and the glass eye was at once extracted.—Joseph W. Gavan in New York Press.

War Without Bloodshed.

It is well known that the nitrite of amyl possesses the power of causing insensibility very quickly in a human being breathing its fumes. The effect is equivalent, temporarily, to a paralytic stroke. It is very cheap and plentiful, and Mr. Edward Weston, the electrician, proposes to use shells filled with this chemical instead of gunpowder. He argues that a few gallons of this nitrite dashed on the deck of a warship would soon render her crew helpless. The most powerful ironclads would be even more vulnerable than the light cruisers, for they would be sucking down great draughts of air through their artificial ventilators, and the odor would thus rapidly permeate the whole ship. The whole crew being rendered helpless for an hour or two the ship could, of course, be towed into a safe port, while the captors ventilated her and removed the insensible men.—New York Mercury.

More Durable Ink Needed.

President Bayles, of the New York board of health, lately called attention to the subject of the use of more durable ink, and enforced his words by saying that it was of importance to people all over the land. He says that very many of the records of births, deaths and marriages received at the office of the board are written in aniline inks, and that the paper upon which these fugitive fluids are used becomes in ten years perfectly blank, the ink having entirely evaporated. —Cincinnati Commercial-Gazette.

Concerning Eyesight.

The inhabitants of mountainous districts and of dry, elevated table lands may have a better sight than dwellers in low, humid, and level regions, although just the reverse may be the case. Among European nations the Germans are generally supposed to have weak eyes, owing, some imagine, to their excessive indulgence in tobacco, while others attribute the supposed decay to the form of type used in their books, which requires closer looking at than ours in reading.—Longman's Magazine.

What a Philosopher Said.

There recently died in this city a well known Boston merchant of convivial habits, and who was known as a good liver in an epicurean sense. Among those who attended the funeral were two friends, one of whom said to the other: "J—— ought to have lived twenty years longer; he had a constitution equal to it." "Yes," replied the philosopher of the two, an ex-member of the senate, "a man inherits his constitution; but he makes his own bylaws."—Boston Budget.

MISCELLANEOUS.

NOTICE.

Notice is hereby given that from and after this day I forbid any person or persons, or firm, from trusting or giving credit to my wife, Jenney Symmes, either in the State of California or out of it, for I will not be responsible for any debt that she may contract.

Working Csses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time, or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5.00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland, Maine

A NEW DEAL!

SATURDAY, JANUARY 5 1889

DIED.

VIEL—At Lone Pine, January 3, 1881, J. A. Viel, aged 31 years.

After years of pain and suffering poor Al. Viel died last Thursday. He was a very kind and genial young man and bore his long torture from rheumatism with patience. He was uniformly cheerful and good natured and for these pleasant qualities will long be remembered by many friends.

Charley Thurston returned home from Reno on Wednesday.

The County Officers elect will take their places next Monday.

Taxes will be delinquent after 6 o'clock p. m. Monday next.

Mr. and Mrs. McLane came up from Darwin and attended the New Years' Ball at Independence.

Henry Giles intends going to England soon to buy and bring back a first-class English race horse.

Messrs. J. C. Crocker and G. Sanger have got back from a visit of several weeks duration to Kern county.

S. P. McKnight is surveying along the line of the Eastside Canal for locators who are preparing to work their land.

Senator Stanford recently sold a suckling colt for $12,500. This is the biggest price so far as known yet paid for a colt of that age.

The *Spirit of the Times*, edited by the private secretary of Governor Waterman, says the Governor will be a candidate for re-election in 1890.

Mr. Sanger brought back from Kern county some buff Cochin China china chickens. The breed will be spread through the Valley.

It is reported that Henry Grover is about to make a sale of a mine at Deep Spring to Mr. Goodyear of the State Mining Bureau at San Francisco.

There will be a footrace at Big Pine tomorrow between Silas Reynolds and Will Sanger. The boys are evenly matched and the race will be very close. The stake is $40 a side.

The ball game on New Year's Day between the Independence Kids and the Georges Creek boys resulted in an easy victory for the Kids. The score was—immense.

Rev. J. H. De La Matyr conducted the Quarterly meeting of the M. E. Church at Independence last Saturday. On Sunday the services at the Church were very interesting. Mr. De La Matyr will spend the winter in Owens Valley for the benefit of his health.

Miss Barnes, late teacher of the school at Camp Independence, has accepted a position in the school at St. Helena, Napa county. She left here last Tuesday. Miss Kohler, of St. Helena, has been engaged to teach the unexpired term of the Camp Independence school.

Last Monday morning San Bernardino had a good sized fire. Eight saloons and thirteen other buildings just outside the city limits were destroyed by fire, undoubtedly the work of an incendiary. Loss, $20,000. The burned district was the resort of low characters.

Tom McDonough heard a few days ago that parties were taking rich ore out of his mine over in Beveridge. He has gone over the Inyo mountains to see what was going on. Mr. McDonough usually comes in from his mine in the winter and stays in the Valley until spring, not leaving anyone at the mine.

Strangers interested about Owens Valley will find the report of the United States Observer at Keeler worth looking at. The report for December will be found in another column. It will be seen that the lowest temperature recorded for the month is but two degrees below the freezing point.

The *Scientific American*, published by Munn & Co., of New York, presents weekly to its readers the best and most reliable record of various improvements in machinery, the arts, and the technical industries, while the scientific progress of the country can in no way be followed so well as by the regular perusal of its pages.

Rev. C. A. Logan, Principal of the Academy at Bishop Creek, has been traveling in the lower end of the Valley during the week in the interest of that institutution. The Academy is an excellent school and young people can get a good practical education there without the greatly increased expense necessary to attend similar institutions in distant places.

The Indians at the settlement in Saline valley have some very fine fig trees; they also have apple, peach and pear trees that bear very fine fruit. They raise vegetables every month in the year and bring considerable quantities across the mountains to sell at Cerro Gordo, Keeler and other places. No doubt is entertained but that orange trees would do well in Saline valley.

A few days ago the taxes of the Southern Pacific railroad were paid at the office of the State Treasurer at Sacramento. The amount was $521,679.89. It took all the Clerks in the office several hours to count the money, which was contained in sacks of $20,000 each. The money was paid in at a time when it was much needed to pay claims against the general fund.

Many farmers are of opinion that a good deal of land in Owens Valley will produce good crops of alfalfa without irrigation. In order to find if this is correct or not C. Mulholland has sowed two tracts at Georges Creek with alfalfa seed. One of these tracts is a swale that was thickly covered with willows; the other is on higher ground where sagebrush grew. In both tracts the land is of good quality.

Bloody conflicts between the whites and blacks continue to be reported from various Southern States. Races so different as whites and negroes will never live in peace and quietness together where law attempts to force an equality between them that their unlike natures makes impossible. Nothing but the exclusion of Chinese would save California from scenes of riot and bloodshed such as curses the South.

An Important Matter.

LOS ANGELES, Dec. 29, 1888.

Dear Sir—In accordance with the following report of Committee, we hereby extend to your organization an earnest invitation to select three delegates to attend such convention to be held in the Board of Trade rooms at Los Angeles at 10 o'clock a. m., Tuesday, January 15, 1889.

E. W. JONES,
Pres. Los Angeles Cham. of Commerce.
E. GERMAIN,
Pres. Los Angeles Board of Trade.
S. M. CRADDICK,
Orange Board of Industry,
C. HOWE,
Pomona Board of Trade.
W. S. TAYLOR,
Sec. Santa Ana Board of Trade.

Report of Committee to issue calls to Boards of Trade, Chambers of Commerce etc., for a convention to be held at Los Angeles January 15th, 1889.

At a convention of the various Chambers of Commerce and Boards of Trade of Southern California held in Los Angeles December 27th, 1888, the following resolutions were unanimously adopted:

WHEREAS, Southern California stands commercially and agriculturally as a separate community on the Pacific Coast, therefore be it

Resolved, First—That it is the sense of this convention that in all matters pertaining to the common interest of Southern California, united action of all the Southern counties is desired and urged.

Second—That a call be issued of this convention to all Chambers of Commerce, Boards of Trade and other similar organizations of Southern California for a second delegated meeting, whose specific purpose shall be the organization of a Board of Trade or Chamber of Commerce to properly represent and take action to advance the commercial, agricultural and general interests of Southern California as it may deem pertinent to the welfare of said section.

Third—That a committee of five be appointed to issue a call for such a convention, to be held in the Board of Trade rooms at Los Angeles January 15th, 1889.

Corn.

A few days ago the editor of this paper was shown two large piles of husked corn on the farm of Mr. W. L. Hunter, at Georges Creek. One of the piles was from seed corn common to all parts of Owens Valley for many years. The other pile was from seed sent to this paper from Washington two years ago and given to Mr. Hunter. The entire product of the first lot was saved and used as seed, from which this corn is the product. Compared with this imported corn the old native corn is the meanest kind of nubbins. The newer variety has large ears and plump, well filled grains. One bushel of these ears would be worth more than two of the old variety. Farmers make a very great mistake when they do not study to get such seeds as are best suited to the soil and climate. This corn grown on Mr. Hunter's farm was planted and tended to by an Indian who worked for a part of the crop; he made a good thing of it and Mr. Hunter is well pleased with his share. A few days ago we traveled over many acres of land on the farm of Mr. Hunter where the grass stood breast high, and so thick that it was a little difficult to force a way through it. This was perfectly cured hay, standing where it grew. Cattle and horses were pasturing on the land and were rolling in fat. The whole of Georges Creek valley is very fine land and a rich settlement will surely grow up there.

Disgusted Sports

There was unbounded surprise and not less disgust and sorrow among the sporting fraternity at the result of the fight between McAuliffe and Jackson. All bets that were offered were eagerly taken that McAuliffe would easily best the Australian darkey. Several bets were made that McAuliffe would not get a black eye or a bloody nose in the fight. But Jackson had the best of the the thumping match from the start. He lammed McAuliffe on the neck till it was nearly broken, and belted him in the stomach till it hurt awfully. McAuliffe laid down to rest in the twenty-fouth round after a terrifiic whack on the neck, and wasn't rested enough to take any more till the referee said it was too late and awarded the fight to Jackson. It would appear that a black fist may hurt just as bad as a white one, and that a white skin may not be any tougher that a black one.

A Success.

Mr. William Rowan passed through Independence last Wednesday on his way home from Los Angeles, where he had been with a band of herses. Most of the animals he took down were young Normans raised on his stock farm at Bishop Creek. For practical purposes the Norman stock is undoubtedly the most profitable as they can be marketed at an early age at good prices. Mr. Rowan brough back with him two fine Cleveland Bays; both were handsome animals of the best class of so-called "all-purpose" horses yet propagated. Mr. Rowan is making a practical success of horse raising.

Private, Signal Corps.

Gold Ore.

For some time past Isaac Hitchcock and his brother-in-law have been at work opening up a mine in the Alabama Hills near Lone Pine. They now have a quartz ledge opened about 200 feet. The ore carries gold and copper. Worked in an arastra the ore is said to yield sixty dollars per ton in gold. It carries a high percentage of copper. Some parties at Independence are interested in the mine. It is intended to ship a carload of the ore to Dayton to be worked for the copper and see if it will pay to continue the shipment.

Rather Chilly.

The weather last night was rather "bracing," the thermometer at 7 o'clock this morning standing at 10 degrees below zero. At 11 o'cloed the mercury had crawled up to 26 degrees above zero. If this county is jerked bodily into "South Californy" will we have weather?—*Chronicle-Union, Mono County.*

Badly Hurt

Last Sunday morning Mr. G. Sanger was severely kicked by a horse. He was going into the corral adjoining Mairs' livery stable at Independence; a horse stood just inside the gate and just as Mr. Sanger opened it the animal kicked and struck him right in the face. Several of his teeth were knocked out and terrible bruises inflicted.

Fine Colt Killed.

On Thursday a fine colt belonging to Ed. Rose was accidentally killed. The colt had been in the corral back of the Independence hotel. Some horses were taken out and the colt in attempting to follow jumped the fence, coming down on a sharp fence post. The post entered the body of the poor animal and held her impaled until it was sawed off. When the stick was pulled out the intestines followed and the colt ran off with its entrails dragging on the ground. The poor beast soon dropped dead. The filly was a half sister to Jesse James, owned by Ad. Smith, and Ed. had been offered $125 for her the day she was killed.

A Pleasing Sense

Of health and strength renewed and of ease and comfort follows the use of Syrup of Figs, as it acts in harmony with nature to effectually cleanse the system when costive or bilious. For sale in 50c. and $1.00 bottles by all leading druggists.

Trudo, McAfee and Carson have Indians at work making a road from Saline valley up to Cerro Gordo. The object in making the road is to reach a borax deposit in Saline valley and bring the borax to Keeler. The length of the road from the borax swamp to Cerro Gordo is about eighteen miles: from Cerro Gordo to Keeler the distance is nine miles. The road crosses the Inyo range of mountains. The borax is described as being very extensive.

The recent robbery of an express car on the C. P. railroad is said to be partly due to the fact that Wells, Fargo and Company have lost the services of most of their best express messengers. The express company did not deal liberally with men who risked their lives in defense of property entrusted to their care. The old race of messengers has been displaced by clerks, mostly very young men, or even boys, and these are regarded with contempt by robbers, as the recent robbery proves. The express has been penny wise and pound foolish.

A decision recently made by the Suprem Court of the State is of great interest to Sheriffs. The Sheriff of Santa Clara county had been in the habit of charging per diem and mileage for himself and deputies for guarding criminals and insane and taking them to the asylum or to prison. A test case was made and the Supreme Court has decided that the salaries of Sheriffs and deputies cover all remuneration except actual traveling expenses incurred. If Sheriffs employ any deputies for conveying criminals and insane to the State institutions they must pay such deputies for their time, and the Sheriff will not be allowed anything beyond necessary traveling expenses.

Sent sealed for 25 cts. WHITTIER, St. Louis, Mo. ALL BOOKS SENT SEALED WHEN ORDERED.

AN ANTIPODEAN TEMPEST.

What an Australian Tornado Is and What It Can Do.

The wind had been blowing softly all the morning from the northwest, and yet clouds, the first I had seen for months, were gradually gathering in the southeast. By noon all that quarter was black, half the heavens to the very zenith were hidden in murky obscurity, and, as though it had been agreed upon by the powers of wind and rain that the clouds reaching so far should be the signal for devastation, the storm suddenly smote us, with no more warning than a few preliminary splashes of heavy rain. In one moment the wind blew a hurricane, and was almost solid; to walk against it was like going through water up to the chin; the dust rose up in one blinding mass, and was instantly smitten to the ground by rain which fell in sheets and was torn into foam and smoke ere it touched the earth; sticks and branches hurtled through the air; the leaves were stripped from the bent trees, and went level in the screaming wind like a solid flight of green parroquets, and even in the most sheltered forest tree after tree came down with a crash, some torn up by the roots, and others, solid and sound though they might be, were smashed and splintered, and their whole crowns thrown yards from the shattered stumps. Our tents lay flat or bellying upon the ground even though we were camped behind the dam we had raised; the slight structure which had been our kitchen suddenly disappeared, while pots and pans, and pannikins rattled and bowled along the ground, as we lay down praying that none of the flying branches might fall upon us. And the rain fell in floods, and in no floods of a figure of speech. This pandemonium lasted just one-quarter of an hour, and then as suddenly as it had begun, so suddenly it ceased; the black clouds flew past us, the sun shone out hotly in a clear sky, and save for the mud, the disordered camp, and our great tank more than than three-quarters full, there was no sign of the squall which had made us fear for our lives, and had taught us what a tornado was and what it could do. But it made the grass grow green again for a few days, the grass that would be so surely needed ere the summer was past, for it was getting toward Christmas, and the thermometer stood higher and higher every day.—*Murray's Magazine.*

—A Vermont minister has preached 121 funeral sermons, with net returns of two barrels of apples and a silver dollar.

—About the meanest gag that could be devised was one which an Ohio highwayman used. He filled his victim's mouth with sand.

—Gold dollars are used for bangles and trinkets to such an extent that they have become scarce and command a premium of twenty-five cents.

—The lack of women's restaurants down town in New York is made up in some instances by the janitresses of big office buildings who serve warm dinners to the pretty typewriters up under the eaves.

—Rattlesnakes have been unusually numerous in Georgia during the last year, and their increase is attributed by the newspapers of the State to the enforcement of the stock law, which prohibits the hog, the rattler's greatest enemy from roaming at large.

—In Norway a bucket of water is set down by horses with their allowance of hay, and they take a sip of one and a mouthful of the other alternately. A broken-winded horse is rarely ever seen in that country.

—In many parts of Great Britain it is customary to remove hives of bees from farms to the mountains in the month of August, so as to give the bees an opportunity to collect honey from flowers that blossom late in the season.

A LUCKY SACRAMENTO MAN.

How He Secures a Fortune on a Trifling Investment.

A story spead a day or two ago to the effect that George Lichthardt, the well-known grocery man, at the corner of Eighteenth and M streets, had made a fortune at one swoop, by drawing $15,000 in the October drawing of The Louisiana State Lottery Company. His friends and acquaintances, while hoping that Fortune really had smiled upon him, were a trifle doubtful about it, and in order to ascertain the facts a reporter of *The Bee* called upon him a few days ago and had an interview.

"Yes, sir, every word of it is true," answered the lucky man in reply to a question, "and" he continued, "I've got all the money safe in a bank."

Mr. Lichthardt stated that for a number of years he had invested his spare change in a Hamburg, German, lottery, but without gratifying results, and then tried the Louisiana State Lottery. He was lucky almost from the beginning and about the first winning he made was $75. Since then he has drawn smaller sums at various times. Not long ago an acquaintance stepped into the grocery and persuaded him to buy a couple of tickets which cost him $2. He laid them one side and had almost forgotten them when his wife induced him to compare his tickets with the list of drawings published in a San Francisco paper.

"Good heavens," was his exclamation, as he made the comparison. "Bless me, if I haven't won $15,000!"

He lost no time in making a further investigation and learned that the good news was true, and within ten days after the public drawing in New Orleans he collected his fortune through Wells Fargo expresss office. The money came in crisp greenbacks.

The winning tickets was No. 46,755.

Lichthardt has since sold out his grocery and will pay a visit to Germany, but he has declared that he will invest his big winning in Sacramento real estate. His good luck has not given him the big head. He proposes to continue to woo dame Fortune through the Louisiana State Lottery—*Sacramento* (Cal.) *Bee*, Nov. 2.

SCHOOL AND CHURCH.

—Bishop Foster of the Methodist church was the original boy preacher. He was converted at six and was licensed to preach at fourteen.

—The theological seminaries generally have an increased number of students. The ranks of the ministry are to be filled up and strengthened.

—A new Roman Catholic college has been opened at Tooting, England. Singularly enough, it originated with two American priests; one from New York, the other from Baltimore.

—The controversy on inspiration bewilders some people. A lady, who has heard assertions frequently made that certain parts of the Bible are not inspired, is anxiously inquiring for an "inspired" preacher, so that she may be secure against mistake.

—Among the various "correspondence schools" which have of late come to be, and we trust to stay, is the "American School of Politics," devoted to the study of the science of politics, political history, American institutions, and public questions of current interest.

A Chinese Christian recently asked Archdeacon Moule how many clergymen there were in England. Being desired to guess, he said: "It's a little country; perhaps 1,500;" and being told that there were 23,000, said, in astonishment: "Twenty-three thousand! Then you can well spare one thousand for China."—*Spirit of Missions.*

—According to careful calculations made by a British clergyman of note and just published, Protestants have increased during the last hundred years from 27,000,000 to 134,000,000, or nearly fourfold. Roman Catholics during the same period have increased from 80,000,000 to 163,000,000, or twofold. The Greek church during the century has increased from 40,000,000 to 83,000,000, also twofold.

—Queen Victoria, when at Glasgow a short time ago, paid a visit to Queen Margaret's College, the only college for women in Scotland. She expressed her pleasure at hearing of the prosperity of the institution, and said: "Every movement which tends to raise the position of women, and extend the sphere of their influence, has my warm approval. I trust that the college may long continue to be prosperous." The friends of "higher education" in England are jubilant over this incident.

HOW RINGS ARE MADE.

The Process by Which the Golden Circlet Is Prepared for Wearing.

The workshop where rings are made is a curious place, full of ingenious mechanical appliances. Gold coin is put in a small crucible with flux, and the crucible placed inside of a covered pot, which is subjected to the heat of a powerful flame of natural gas. To increase the intensity of the heat a strong blast is produced by means of a fan, making a constant even temperature. The gold is rolled and converted into convenient shape for use, precisely as iron is worked in a rolling mill. It is passed through grooved rolls of various sizes, one after another, until it is fashioned into narrow strips of the desired width and thickness. There are also other rolls for converting the ingots into sheet gold. For stamping the settings for rings a screw press is used, dies of various sizes being inserted as required. A diamond ring is thick at the center, gradually tapering in size from the top downward. A piece of gold, after being rolled and cut, is laid upon a metal die and a heavy hammer, working in a frame and operated by means of a rope and pulley, is made to descend, thus giving with one blow the desired shape to this part of the ring. Hundreds of different dies are necessary for the various styles and sizes of rings.

After the drop hammer has stamped the gold into shape it is placed in a thin metallic plate containing a hole, in which it fits exactly, and driven through by a punch worked by hand, thus cutting away the gold adhering to the edges, which is carefully saved.

All along the side of the room are workmen seated at benches, some shaping the pieces into rings and soldering them together, others inserting and fastening the stone settings, and still others performing various sorts of equally difficult and delicate work, all necessary in the making of a ring. In another part of the room is a curious bit of machinery which is called a lapidary lathe and used for shaping and cutting down stones when necessary. A round piece of metal, shaped like a small grindstone, is set in horizontal position and made to revolve. To this emery is applied, and the stone being held against it is soon reduced to the proper dimensions. It is then polished on a similar appliance of wood coated with putty powder. Another interesting object is the enamelling furnace. The article to be ornamented, having previously been engraved for the reception of the enamel, is placed in a little oven coated with the enamel in the shape of a powder. It is then heated until the enamel runs, and is then removed from the fire to be cooled and finished.

A peculiar process is that of gilding, or electroplating. The article to be gilded is first thoroughly cleaned by a fine brush of brass wires. A piece of gold is attached to the positive pole of an electric battery and the article to the negative. Both are then placed in the same solution and the electric current does the work, transferring a portion of the gold to the object to be plated.—*N. Y. Graphic.*

Exactness Before All Things.

"Now, Georgie, take the message and be sure to get the answer. You'll hurry, won't you?"

"Yes'm."

Georgie went off. At the end of two hours he came back to mamma.

"Georgie, where on earth have you been all this time? I told you to hurry!"

"So I did. But you didn't say to hurry back."—*Tinne.*

SCIENCE AND INDUSTRY.

—Analysis of natural gas shows the proportion of each constituent in 100 parts of the gas to be as follows: Carbolic acid and carbonic oxide, 6-10 each; oxygen, 8-10; olefiant gas, 1; ethylic hydride, 5; marsh gas, 67; hydrogen, 22; nitrogen, 3.

—The hand-made time pieces of the Swiss and French, who have so long held the supremacy as clockmakers, are not now regarded as superior to those of American machine make. The American machine-made watch is as finished and accurate as its foreign competitor, and is, of course, vastly cheaper.

—An English fireman writes to the London *Fireman* his belief that fires may be put out by a mixture of plaster-of-paris and alum. His plan is to throw the mixture confined in a combustible bag upon the fire. An incombustible pulley-block, to haul up the bag, must necessarily be affixed to every building to render his plan practicable.

—Dr. Jastrow, of the University of Wisconsin, has collated considerable evidence which goes to show that the ear is the dominant organ of the mind in some people and the eye in others. Those in whom the ear is the dominant organ are designated as ear-minded; those in whom the eye is the dominant organ are called eye-minded. A dog is usually smell-minded, or nose-minded.

—A new method of weather prediction has been discovered by Ch. Montigny, a French physicist. He has observed that the scintillations of stars increase before many storms, indicating disturbance of the upper atmosphere, hours before the meteorological instruments show any change. The fiercer the storm, the more is the strength of the scintillations increased.

—A belief has hitherto generally prevailed that printing was invented by Gutenberg, about the middle of the fifteenth century. It is said, however, that Professor Karabaceti has recently demonstrated, at a conference at the museum of Vienna, that movable types of wood, both for letter press and ornaments, were in use in Egypt 500 years before the printer of Mayence.

—Prof. Ormond Stone states that only four cases have been found in which the known motions of the principal bodies of the solar system can not be fully explained by Newton's law of gravity. The unexplained discordances are the motion of the perihelion of Mercury, and the accelerations of the mean motions of the moon and of Encke's and Winnecke's comets.

—The tops of pine and spruce trees are now utilized in the manufacture of paper. The discovery is of immense value, as it makes marketable a vast mass of what has hitherto been waste material. Hereafter the branches of all evergreens will be gathered, and after a process of steaming to extract the resinous matter will be ground into dry pulp, which may be shipped to any distance.

—French physicians have adopted a new system of curing consumption, based on sulphuric acid in medicated inhalations. Sulphur slightly moistened with alcohol is burned in a brazier, a little benzoin or powdered opium being sometimes added to make the fumes less disagreeable. The patient is required to stand twice a day in this sulphurous chamber and inhale the medicated atmosphere until his lungs are saturated with sulphuric acid. The treatment is said to be markedly successful.

PAINTING THE TOWN.

A New Version of the Origin of a Very Popular Phrase.

"F. D." wishes to know the origin of "painting the town red." I believe it is the paraphrase of an expression that frequently occurs in an old Irish balladry. In looking over a collection of old Irish war songs and ballads descriptive of the sanguinary conflicts between the Irish chieftains and the Anglo-Norman invaders of Ireland, I have very frequently found phrases closely akin to that of painting the town red. For instance, when the Irish Kernes, under William MacGeoghan, Lord of Kenil Feacha, in the County of Westmeath, overthrew the English at the battle of Ardonocher, A. D. 1328, slaying 3,500 of the latter, the bardic chronicler tells us that the midnight skies were reddened with "torrents of flame from the highlands east and west," in honor of the victory. The towns and hamlets, too, wherein the kindred of the victors dwelt, blazed or were "painted red" with bonfires, and the inhabitants thereof naturally gave loose rein to their mirthful propensities. The fires upon the highlands were the primitive mode of telegraphing a distaff kinsfolk and sympathizers the glad tidings and the exuberant exultation that followed.

In describing the effects of the battle of Ouart Hill, which was the first engagement between the Irish insurgents and the English army in the great Wexford rebellion of 1798 in Ireland, and in which the insurgents came off victorious, the local balladist says:

The hills and skies were painted red
That night with beacon fires,
For Wexford's sons had well avenged
The Saxon's slaughtered sires.

I could cite a score of other quotations showing several other expressions exactly similar to that of "painting the town red." It was a favorite one with the old Irish bards when depicting the scenes that followed a military triumph on the part of their countrymen. Is it then unreasonable to infer that the phrase, "painting the town red," for indulging in the wild antics of unlicensed hilarity, had its origin in the way I allude to? This is what William MacGeoghan says, and I believe him a most excellent authority.—*Cor. Boston Post.*

DO HAMBURG FIGS

Grow in Hamburg? No; but they are composed of the finest fruits and vegetables, so combined that they may be taken at all times and places without changing diet, and so pleasant are they, as well as effective, that the worst case of constipation, biliousness, dyspepsia, indigestion and piles at once yield to their use. By the use of HAMBURG Figs you are enabled to secure sound and healthy sleep, since they promote digestion without injurious medication. By the occasional use of HAMBURG Figs the system may be kept in perfect health, consequently you should always keep a box in the house. Hamburg Figs cost 25 cents a box. Dose, one Fig.

In any case where the system requires building up, *Dujarid'n's Life Essence* never fails. It will succeed where everything else has failed in bracing up organic function. Price, $1.50 a bottle. All druggists.

A QUESTIONABLE DISH.

How Charlie's Faith in His Wifey's Cooking Received a Shock.

"Charlie," said a young wife to her husband, "I bought some lovely mushrooms to-day and have cooked them for your supper."

"How do you know they are mushrooms?" said Charlie, suspiciously.

"Why, the man I bought them of said so. Then they were pink on the under side and that means mushrooms—or is it toadstools—well, it's one or the other."

"Humph! they look kind of dingy," sniffed Charlie.

"But they're not toadstools, for I stirred them with a silver spoon and they didn't turn it black."

"Then they *are* toadstools," said Charlie, "because I know mother's mushrooms always turned the spoon black."

"Well, dear, you know if you eat them you can soon tell. If they're mushrooms it seems a pity to waste them, and if they're toadstools——"

"Go on—if they're toadstools you'll soon be a widow."

"How unkind you are! I boiled them in saleratus water to make sure. They wouldn't hurt an infant now," sobbed the little woman.

Charlie had unbounded faith in his wife's cooking but he didn't eat the mushrooms. He told her to make some last years "ketchup" with them, and bottle them down for future use.—*Detroit Free Press.*

British Museum Treasures.

In the manuscript department there is collected such a wealth of interest that it is impossible to speak of its contents except in the most general terms. In the Cottonian, Harleian and Old Royal Libraries are to be found remarkable collections of state papers; and in the 50,000 volumes and the 50,000 charters and rolls which stand on the shelves of the department are contained materials for the history of the whole civilized world, in the handwritings of those who have made history. Some few treasures from the recesses of the department are shown in the King's Library and in the Manuscript Saloon. Admirers of illuminated manuscripts may there feast their eyes on superb specimens of the work of English, French and Flemish artists, from the time of King Edgar down to the present day. Close to these may be seen a complete set of the great seals of English sovereigns, from the time of Edward the Confessor to Queen Victoria; and a series of historical deeds, including photographs of Magna Charta, the original Bull of Leo X, conferring on King Henry VIII. the title of Defender of the Faith, a mortgage deed bearing the signature of William Shakespeare and the Recognitions of Clement of Rome, written at Edessa in A. D. 411, being the oldest dated volume in existence.—*Blackwood's.*

—A young man, a Protestant, attended a Roman Catholic church for the first time on a recent Sunday at Bar Harbor. When he was going out he thought he saw the congregation dropping offerings into a receptacle at the side of the door, so when he reached it he put forth his hand and deposited a quarter in the holywater font.

A Universalist Church is being organized at Omaha, Neb., the first of that denomination in the city.

Offensive breath vanishes with the use of Dr. Sage's Catarrh Remedy.

Though the love of money may be the root of all evil, the lack of it leads to many branches of evil.

A VALUABLE MEDICAL TREATISE.

The edition for 1889 of the sterling Medical Annual, known as Hostetter's Almanac, is now ready, and may be obtained, free of cost, of druggists and general country dealers in all parts of the United States, Mexico, and indeed in every civilized portion of the Western Hemisphere. This Almanac has been issued regularly at the commencement of every year for over one-fourth of a century. It combines with the soundest practical advice for the preservation and restoration of health, a large amount of interesting and amusing light reading, and the calendar, astronomical calculations, chronological items, &c., are prepared with great care, and will be found entirely accurate. The issue of Hostetter's Almanac for 1889 will probably be the largest edition of a medical work ever published in any country. The proprietors, Messrs. Hostetter & Co., Pittsburgh, Pa., on receipt of a two cent stamp, will forward a copy by mail to any person who cannot procure one in his neighborhood.

The average society belle is much less beautiful than she is painted.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

Over $4,000,000 has been put into building improvements at Denver, Col., during the past year.

Leave hope behind,
All ye who enter here!

So ran the dire warning which Dante read on the portals of the Inferno. So runs the cruel verdict of your friends if you are overtaken by the first symptoms of that terrible disease, consumption. "Leave hope behind! Your days are numbered"!! And the struggle against death is given up in despair. But while there is life, there is hope! Dr. Pierce's Golden Medical Discovery has cured hundreds of cases worse than yours; and it will cure you, if taken in time. But delay is dangerous. No power can restore a wasted lung; the "Golden Medical Discovery," however, can and will arrest the disease.

The Masons of Buffalo will invest $185,000 in a new Masonic Temple.

See Antisell Piano advertisement.

Try Germea for Breakfast.

BEAUTY of Skin & Scalp RESTORED by the CUTICURA Remedies.

NOTHING IS KNOWN TO SCIENCE AT ALL comparable to the CUTICURA REMEDIES in their marvelous properties of cleansing, purifying and beautifying the skin, and in curing torturing, disfiguring, itching, scaly and pimply diseases of the skin, scalp, and blood, with loss of hair.

CUTICURA, the great Skin Cure, and CUTICURA SOAP, an exquisite Skin Beautifier, prepared from it, externally, and CUTICURA RESOLVENT, the new Blood Purifier, internally, cure every form of skin and blood disease, from pimples to scrofula.

Sold everywhere. Price, CUTICURA, 50c.; RESOLVENT, $1; SOAP, 25c. Prepared by the POTTER DRUG AND CHEMICAL CO., Boston, Mass.

Send for "How to Cure Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Dull Aches, Pains, and Weaknesses instantly relieved by the CUTICURA ANTI-PAIN PLASTER, the only pain-killing plaster. 25c.

S. F. N. U. (First Series) No. 337.

CRAMPS OF THE MUSCLES CURED.

John I. Wood, of Stratford, Ont., was cured of cramps in the legs by wearing ALLCOCK'S POROUS PLASTERS. Mr. Wood says:

Some three months ago I was taken very sick with severe pain in the small of my back over the kidneys. The pain was excruciating. I applied an ALLCOCK'S POROUS PLASTER over the affected region and had relief almost within an hour. At the same time, in conjunction with this trouble, I had very great nervous disturbance, affecting my legs with cramps so I could scarcely sleep. Meeting with such success with my back I applied a plaster under the knee on each leg, and in three days was completely cured, and have never been troubled in either way since.

Cauliflower seed are eight times as valuable by weight as silver. They sell at $8 an ounce.

A DREAM OF FAIR WOMEN.

Tennyson in his exquisite poem, dreams of a long procession of lovely women of ages past. This is all very well, but the laureate would have done the world a greater service if he had only told the women of the present how they could improve their health and enhance their charms. This he might easily have done by recommending the use of Dr. Pierce's Favorite Prescription. Health is the best friend of beauty, and the innumerable ills to which women are peculiarly subject, its worst enemies. Long experience has proven that the health of womankind and the "Favorite Prescription" walk hand in hand, and are inseparable. It is the only medicine for women, sold by druggists, *under a positive guarantee* from the manufacturers, that it will give satisfaction in every case, or money will be refunded. This guarantee has been printed on the bottle wrapper, and faithfully carried out for many years.

There were 7,572 cases of suicide in France last year, of which 1,420 were in Paris. Only 1,608 were women.

$5,000 IN PRIZES

Is offered by the publishers of THE YOUTH'S COMPANION for the best short stories. There are three prizes of $1,000 each, three of $500 each, and three of $250 each. (Pat. Oct. 11, '87) cures all Nervous and Chronic Diseases of both sexes. Price $6 and upward. Send 2c for sealed pamphlet No. 2. RUPTURE. If ruptured send stamp for Pamphlet No. 1. PILES. New Invention. Send 2c stamp for Pamphlet No. 3. Address M. E. T. Co., 703 Sacramento St., San Francisco, Cal.

The OLDEST MEDICINE in the WORLD is Probably Dr. Isaac Thompson's CELEBRATED EYE WATER
This article is a carefully prepared physician's prescription, and has been in constant use for nearly a century, and notwithstanding the many other preparations that have been introduced into the market, the sale of this article is constantly increasing. If the directions are followed it will never fail. We particularly invite the attention of physicians to its merits.
John I. Thompson Sons & Co., TROY, N. Y.

ASTHMA CURED
GERMAN ASTHMA CURE
Instantly relieves the most violent attack, and insures comfortable sleep. NO WAITING for RESULTS. Being used by inhalation, its action is immediate, direct and certain, and a cure is the result in all curable cases. A single trial convinces the most skeptical. Price 50c. and $1.00 of any druggist, or by mail. Sample Free for stamp. Dr. E. SCHIFFMANN, St. Paul, Minn.

PIANOS, 1st Premiums. 25,000 in use. 20 years Established. New patented Steel Tuning Device, in use in no other Piano, by which our Pianos stand in tune 20 years, good for 100; not affected by climate. No wood to split, break, swell, shrink, crack, decay, or wear out; we guarantee it. Elegant Rosewood Cases, 3 strings, double repeating action; finest ivory keys; the Famous ANTISELL. Call or write for Catalogue, free. T. M. ANTISELL PIANO CO., Manufacturers, Odd Fellows' Hall, Market and Seventh Streets, San Francisco.

POWDERED 98% CAUSTIC SODA, TREE WASH, Carbolic Sheep Wash.
T. W. Jackson & Co., 104 Market St., Mfg. Agents.

ST. JACOBS OIL
For Neuralgia.
FRESH TESTIMONIALS.
20 Minutes. Irvington, Ill., May 23, 1888. About three years ago, Mrs. Egbert Tuneyck was taken with Neuralgia in head and face had suffered three days, she tried St. Jacobs Oil, was relieved in 20 minutes. Jas. T. Goodner, Druggist.
Prompt. Columbus, Ohio, May 29, 1888. Have suffered with Neuralgia for many years; I use St. Jacobs Oil, it gives relief and finally drives away all pain. I would use no other medicine. SOPHIA JEFFER.
Sure. Towanda, Ill., June 5, 1888. The wife of SIMON P. ANDERSON had pains in the head from childhood, which yield to St. Jacobs Oil. G. W. HOWARD & SONS, Druggists.

LAUNDRYMEN'S HUMOR.

A BACHELOR DESCRIBES SOME FEATURES OF MONGOLIAN LIFE.

A Chinaman Who Became a Slave to His Voice—Hop Wah as a Joker—Fond of a Social Glass—Told in Confidence—"Sam Su" and Chinese Sandwiches.

"The first Chinaman I ever had dealings with," said the old bachelor, "was a little weasened up fellow, not more than five feet high, who had a store on Washington street. Next door to him was an Italian shoemaker. Lee, for that was the laundryman's name, was a most taciturn individual, even for one of his race, but he had a peculiarity. He used to sing, not only in his shop, but also, in a lower voice, when he was walking along the street. It was when he was hard at work upon the bosom of some refractory shirt that he could be heard at his best, or, as some might put it, at his worst. Lee's voice was not a pleasing one, even when exercised on the lower notes only, but when he had got warmed up and essayed to reach the higher key it was positively heartrending. How his subordinates, of whom he had two, stood it, is beyond human comprehension. Lee's voice grew upon him, and when I last knew him he was a perfect slave to it.

"My next laundryman was a character. He was about 30 years old, fairly good looking, judged by the American standard, and spoke English quite fluently. He answered to the name of Hop Wah, but I always called him Hop for short.

SOMETHING OF A JOKER.

"By degrees, and when I had satisfied Hop that I had no intention of patronizing his rival across the street, for whom he entertained a profound yet pitying contempt, he told me some of his history. He had been ten years in America, and about six years in Brooklyn. I asked him one day if his parents were alive. He replied that he believed his mother was, and added, 'Old man dead long time.' Then he laughed quite merrily, as if the elder Hop's decease was a good deal of a joke. He went to Sunday school regularly, and this accounted for his proficiency in the English language. He went to Mott street quite frequently, too, as he informed me, and in his way I think was a rounder. Happening one afternoon to notice a 'God Bless Our Home' motto of the regulation pattern fastened to the wall alongside of a Chinese almanac, I asked him if he was a Christian. He shook his head very emphatically, and then laughed so that I thought he would fall off his high stool. When I said that it seemed queer to find a Christian motto in a heathen place of business, he winked at me with great deliberation and remarked, jerking his thumb in the direction of the card, 'Catch trade; everything goes.' Certainly there were no flies on Hop, and his knowledge of current slang was both profound and aptly applied. By and by he got more noticed, and in a short time the shop inside looked like a mission school.

"One very cold afternoon last winter he was about half frozen when he called at my room with the week's washing. As he laid down the bundle he made some remark about the temperature which sounded vastly like an expression used by unregenerate Christians and proceeded to rub his hands vigorously. Noticing that he looked affectionately upon a glass of hot whisky and water which I had just brewed for myself, I asked him if he would have one. Hop 'didn't mind if he did,' and by the manner in which he got away with the steaming beverage I was led to believe that it was not by any means his first attempt. After this I got into the way of offering him a horn whenever he happened to find me in, and I can't recollect that he ever refused. One of his weekly visits was made the day before last Christmas. I was feeling at peace with the world myself, and when Hop had got away with his customary refresher I suggested that another would not hurt him. He agreed with me, remarking quite airily that he 'would have to go me,' and helped himself to his second drink, an even larger one than the first, and that was no tablespoonful.

GROWING CONFIDENTIAL.

"Not to be outdone in generosity he offered me a cigar, which he took out of his hat, and which I declined, having already had experience of likewise cigars. I think Hop must have struck hospitality in other quarters before reaching me, for after the second glass of whisky he took a chair by the fire and put his heels up on the mantelpiece. He was remarkably good humored and growing confidential. Said he was about tired of work, and thought that he would soon go back to China, where he would marry and settle down to a life of ease. At the reference to marriage he stuck his thumb among my ribs and chuckled after the fashion of Asiatics. When he arose to go I saw plainly that in addition to his large bag of clothes he would have to carry home with him a very well developed jag. He waved his hat at me as he left the room, and I heard him trying to whistle as he went down the first flight of stairs. At the head of the second flight he lost his balance and fell headlong, striking the street door as if he had been shot out of a catapult. He was not hurt, at least he did not appear to be, for, picking himself and his bag up, he let himself out, and from the window I next saw him tacking rather unsteadily down the street in the direction of his home. He made no reference to his mishap when he called again, nor did I say anything, but Hop got no more whisky.

"Early in the new year he called one morning before I was up, carrying with him a bottle of rice brandy, 'Sam Su,' as it is called in China, and some Chinese sandwiches. He said it was some kind of a feast day among his people and he wished me to have a share of the good things going. Finding the Sam Su too rich for my stomach, I placed it on top of a convenient ash barrel in the street. If any one drank it, I pity him sincerely. The sandwiches were quite a novelty and taken before breakfast I found them to be quite appetizing. Instead of bread slices of lemon wave used, and in place of meat or cheese green ginger, slightly sprinkled with salt. These sandwiches, Hop subsequently informed me, were in great demand in his own country by gentlemen who had made a night of it. Last May Hop sailed for Hong Kong, taking with him in the inside pocket of his silk blouse $2,000 in American gold. He called to wish me good-by, and expressed his hope that if he should ever return to Brooklyn, which, however, was not likely, I would again favor him with my custom."—"C. R. C." in Brooklyn Eagle.

Not Qualified to Judge.

Teacher—Now, if you stand facing the west, will the north be to your right or left hand?

New Scholar—I'm sure I don't know, ma'am; I'm a stranger in these parts.—Lincoln Journal.

MILITARY TACTICS.

THE CHANGED CONDITIONS OF MODERN FIELD WARFARE.

Individual Independence, Strategy and Open Order Front in Battle Required by the New Weapons—The Line of Battle—But Little Maneuvering.

When weapons were not so formidable or deadly we depended on the united action and constant co-operation of large, compact masses of men moving as a unit, seeking to crush the enemy by their very weight, and giving to each other that moral support which results from companionship in danger. But new weapons will require less attention to the discipline of the masses and a more perfect discipline for each individual soldier, who must rely more upon himself and regard his weapon rather than his companions as his best and surest defense as well as the means by which he may contribute most to the defeat of the enemy. He must look less to the support of his friends and more to his own individual movements and to the judicious expenditure of his ammunition. He must be taught with more care to take cover, to advance by rushes, to practice the principles of strategy, while exhibiting the same personal bravery as in times past.

The experience of the United States army on the plains in the numerous Indian wars has been of the most practical and trying kind and peculiarly applicable to modern tactics. There are no more wily strategists than the Indians. Their tactics have always been characterized by great personal shrewdness, wariness and strategy. In them individuality is developed to the fullest extent. Their movements are quick and free from all stiffness, while they are celebrated for their ambuscades and ruses, their great endurance, accurate marksmanship and the habits of taking cover and securing every possible advantage for personal safety, with great bravery at the same time. All these principles and peculiarities of Indian warfare with open order fighting find practical application in modern tactics, and the army officers who have fought this foe for many years, learning all their tricks and checkmating them at their own game, are well equipped with ideas that may well be embodied in our new system.

A foreign officer who was sent to witness the grand review of our armies in Washington at the close of the civil war and report thereon, declared to his sovereign that he had never seen an army so remarkable for "moral discipline." In this he referred to the great intelligence of the rank and file—the individual discipline and independence. Many foreign officers were inclined to criticise the peculiarities of our soldiers—their freedom of action, which the foreigner thought too moblike. But the bravery they displayed, the terrible loss of life inflicted and the dress parade precision in masses which they would exhibit whenever it was applicable only proved the tendency to select the methods best suited to the circumstances and the nature of the case, to the ground and the peculiar country in which they fought. They were simply practical, and precision of movement was not always possible nor desirable. But today clocklike movements of masses under fire are not permissible, and it follows that the qualities for which our soldiers were criticised in 1865, as well as those for which they were praised, will be the ones most to be cultivated in the future. In short, the individual intelligence and independence of our soldiers would increase their efficiency under the changed conditions of warfare, and diminish greatly the advantage possessed by foreign armies due alone to their perfection and permanency of organization rather than to the superior intelligence or strategic ability of their officers and men.

The general principles which will govern the new tactics are pretty well understood. On former days the skirmish line was thrown out, under cover of which the troops were deployed and formed in two ranks for battle, the skirmishers being then withdrawn or replaced by the compact line. All this will now be changed, and means will be provided by which troops in any formation may be quickly deployed in three lines for battle. The first line, composed of from one-third to one-half of each battalion, will be thrown forward, as was the old skirmish line, to open the battle, followed at a distance of several hundred yards by a supporting line of about one-third of each battalion, while the remaining force will be held several hundred yards in rear of the supporting line, massed and under cover if possible, ready to be deployed when most needed to cover a retreat, to meet or to make a turning movement, or to join the main body in the final rush. The men in each of the three lines will be assigned to small groups, each with its leader, whose movements and directions they are to follow. Individual freedom will therefore be permitted with the single qualification that the groups be kept intact as far as possible, rallying or deploying, advancing or retreating together, thus insuring control by the officers through the group leaders of non-commissioned officers.

The first or firing line will seldom be withdrawn or received under fire, but will generally remain and fight to the finish, being re-enforced by the two lines in the rear. Ammunition must therefore be carried in as large quantities as possible and husbanded with care. The new small caliber, high powered rifles now being adopted by foreign powers will enable the men to carry many more rounds of ball cartridge than formerly, and, although the smaller and lighter bullets will not kill so often or produce such ugly wounds, their increased velocity and greater range and accuracy will make up somewhat, and the number of wounded will be increased. Wounded men embarrass the movements of an army more than the dead, and in short campaigns cripple it more effectually. Men from the supporting line will be gradually thrown forward into the firing line to take advantage of any weakness of the enemy or to meet a heavy attack, the men always attaching themselves to the groups as they come up. Whole groups from the supports will frequently be thrown into the intervals in the firing line.

There will be little maneuvering under the deadly fire of modern arms; the lines will be able to do little more than advance or retreat, rally by groups to fire volleys, or to carry some point of advantage by a rush. The reserves will be depended on to meet emergencies. Flank attacks and turning movements will be the rule, and strategy must be practiced more in the future than in the past, or at least it will have a still greater influence in determining the result of a battle. The supports will finally become merged in the firing line, giving by their impetus a forward movement to the whole line or enabling it to withstand the enemy. There will thus be a constant push from the rear under the direction of the officers. One side will eventually give way, and the time will come when the victors must make a united rush in a more or less compact body or in a line of groups.—New York Times.

In Chili the paper money is so depreciated that hotel charges are about $600 a day and bootblacks get $10 for a shine.

GOSLINGS AS FISH BAIT.

Remarkable Experience of a St. Louis Sportsman—How to Catch Bass.

A letter from a St. Louis gentleman, who has been for some time up at Green Lake, Wis., has just been received here, and it contains the account of a fishing exploit that is remarkable. "I went out early the other evening," writes the gentleman, "in the hopes of encountering some of the famous pickerel of this resort when they were just coming up from their mossy beds after a morsel for breakfast. I trolled for half a mile without a strike. I was passing a farm house, in front of which were an old goose and a lot of goslings a month or so old. They were swimming around, dipping down under the water, and chattering away in high glee. Just as I was opposite them there was a splash and one of the goslings disappeared. Almost instantly another one went in the same way, the mother goose never seeming to heed their absence. I thought it strange, and pulled over toward the flock, but before I reached them three more were pulled under the water. I stopped rowing close to the spot where the fowls had disappeared, and watched from close range to see if I could discover what agent was at work destroying the farmer's goslings. One of the little fellows was separated from the other three, for that's all that were left. I was close to the single gosling, watching him, when I saw a monstrous black bass shoot through the water, grab the bird. I had my eye on, and give the water a flirt with his tail as he disappeared with his breakfast. Before the surface had become calm or my astonishment had been overcome, the remaining three of the gosling brood were in the capacious maws of the hungry bass.

"By this time the old goose, who had been tranquilly swimming about, began to think that something was wrong, and when no little ones came at her call she became frantic. I stood right there for some time, expecting that some audacious bass would walk off with the old goose, but they didn't.

"I went up to the farm house, told the fate of the goslings, and was met with no expressions of surprise.

"'That's no uncommon thing,' said the farmer. 'I'll bet I've lost a thousand young geese just in that way. I thought those were too big for bass bait. I keep my young geese in a pond back of the house until they get big enough to take care of themselves, as I thought the ones you saw gobbled up were.'

"An idea struck me, and I bargained with the farmer for three goslings from the pond back of the house. I would fool the bass. He soon came in with three nice, downy little fellows, and I took one, tied my line about the center of his body, and fastened a gang of hooks under the goslings's breast so they hung down about three inches. Then I took a long rod from the boat, attached the line and gently dropped the swimming bait into the water. The little gosling swam around for about half a minute, when there was a rush, a tug at the line, and I had my hungry fish safely hooked. It was a whopper, and it took me twenty minutes to bring him up to the boat. The bass had struck the hooks, as I intended, before he reached the gosling, and I succeeded in landing thirty-one big bass with my three before they were used up. They were the biggest bass I ever saw before, averaging a trifle over six pounds apiece, one of them weighing nine and a quarter pounds. When I go after bass now you may be sure I go with goslings for bait." St. Louis Globe-Democrat.

Shopping Manners in Paris.

Mark Twain is not the only American who has been disgusted with the pushing, the scrambling, the incivility of the whole mob in the great French shops, buyers as well as sellers, counter jumpers as well as purchasers. The crowd at the Louvre, the Bon Marche or the Printemps, on any fine afternoon, is something that must be seen to be believed. The manners that prevail! Customers dispute the ownership of various things by pulling them out of each others' hands; toes trodden on; inspectors eye impertinently young and old to discover thieves; then the elbow digs, the flushed faces, the torn clothing! Finally comes the push of the people up to the pay desk, in a line, like pigs to the slaughter house. Your purchases have been taken from you to be tied up.

Mistakes must be frequent in this department. A list of articles is read out by a perspiring clerk and a total is given. You lay down money and it is immediately snatched up. No receipt is given. You have come, seen and had your funds conquered from you. Now you may go or stay; no one heeds you further. Perhaps you will feel disposed to rest a while in the luxuriously furnished salon de lecture of the establishment and read the morning papers. Unfortunately it is crowded, like every other place on the premises. The reading rooms of the great French shops are beginning to figure in the works of the contemporaneous French novelists as a convenient place of illicit rendezvous. A glance around one of them often shows couples of fact, not fiction, whose demeanor favors the supposition that they have met by appointment and not "by chance."—Olive Logan in Boston Transcript.

The Value of Good Ink.

The health department of New York city calls attention to the fact that a large proportion of records of births, marriages and deaths received for filing are written in aniline inks, which will become illegible in a few years. As the originals are now filed as received, certificates written in these fugitive inks will become sheets of blank paper in eight or ten years, and valuable records will then be lost. It is said at the office of the registrar of vital statistics that ministers are more careless in making certificates of marriages than the doctors in reporting births or deaths. On many occasions the blanks have been filled in with a pencil and had to be returned to be written in ink. Ministers are also partial to colored inks, unmindful, doubtless, that the ink will fade away in a few years.

Deputy County Clerk Gilroy said that many of the papers filed in the county clerk's office were written with poor ink, but as a record was made of nearly everything filed their value was retained.

"It is a mighty good idea, however," said Mr. Gilroy, "for the newspapers to call the attention of the people to the necessity of using good black ink in executing legal and official papers. Colored inks are no good and were only made to suit a woman's fancy. I have never seen any court records written with aniline ink. I think black ink is used in every court in the city."—New York Evening World.

Sung the Organist's Instructions.

A noted tenor singer was once rendering a solo in church in Warren's "Te Deum," and, mistaking the instruction to the organist as to the use of the stop for the sacred words, sung out at the top of his voice, "Pedal, great gamba, and swell," to the astonishment of the congregation. He could not account for the uncontrollable and convulsive, though suppressed laughter on the part of the choir, and was not aware of his mistake until it was explained to him, when he was overcome with mortification.—Chicago Journal.

THE JUGGERNAUT MYTH.

MONCURE D. CONWAY PLAYS ICONOCLAST TO THE BLOODY CAR.

The Custom of Self Immolation Under the Wheel of the Hindoo Idol Never Had an Existence—How the Story Might Have Originated.

There is no horror more widespread than that of the car of Juggernaut. No church or chapel or Sunday school room is unfamiliar with the vision of idolators throwing themselves beneath the blood stained wheels. There are few American girls—boys even—who have not shed tears and dimes for the victims of that cruel idol. The dreadful self immolating has added a proverbial similitude to pulpit and platform eloquence. Grim Juggernaut has got into cyclopædias. But the chariot of truth is passing through the world; many cherished fallacies must be cast beneath its remorseless wheels; among them must be crushed this world wide notion about Juggernaut. It is a delusion. Hard as it is to lose one's pet horror, this one must be given up. The supposed custom of immolation under the wheel of Juggernaut does not prevail—never did prevail. On the contrary, Juggernaut is the most humane of all oriental deities, and his cult the most civilized.

I could fill a column with official and unquestionable proofs of this paradox, but reserve the space for some facts of more interest to the reader. It will be sufficient to substantiate the point by a few competent authorities whose testimony has not been disputed.

GAZETTEER GENERAL'S REPORT.

Dr. W. W. Hunter, gazetteer general of India, says in his Orissa (1872):

"In a closely packed, eager throng of 100,000 men and women, many of them unaccustomed to exposure or hard labor and all of them tugging and straining to the utmost under the blazing tropical sun, deaths must occasionally occur. There have, doubtless, been instances of pilgrims throwing themselves under the wheels in a frenzy of religious excitement. But such instances have been rare and are now unknown. At one time several unhappy people were killed or injured every year; but they were almost invariably cases of accidental trampling. The few suicides that did occur were, for the most part, cases of diseased and miserable objects. The official returns now place this beyond doubt. Indeed, nothing could be more opposed to the spirit of Vishnu worship than self immolation. Accidental death within the temple renders the whole place unclean. The ritual suddenly stops and the polluted offerings are hurried away from the sight of the offended god. According to Chaltanya, the apostle of Jaganath, the destruction of the least of God's creatures was a sin against the Creator. Self immolation he would have regarded with horror. The copious religious literature of his sect frequently describes the car festival, but makes no mention of self sacrifice, nor does it contain any passage that could be twisted into a sanction of it. Abul Fazul, the Mussulman observer, is equally silent, although from the context it is almost certain that, had he heard of the practice, he would have mentioned it. So far from encouraging self immolation, the gentle doctrines of Jaganath tended to check the once universal custom of widow burning. Even before the government put a stop to it our officials observed its comparative infrequency at Puri."

MAKING PERSONAL INQUIRY.

Being in India eleven years after the above was published, I conversed with Dr. Hunter on this subject, and found that the evidences even for suicide under the car at Puri had diminished since his work was written. The English commissioner at Orissa had in four years known but one death by accident, and two in which the victims had rid themselves of excruciating complaints. This was just after the province passed under English rule which did not interfere with the festival. Professor Bain, of Aberdeen university, says (1876):

"An Indian civil servant, Mr. James Geddes, who had been resident magistrate at Orissa, where the festival is held, informed me, from his own knowledge, that no trace of the practice of immolation could be found in the public records of the district."

According to Wilson, the orientalist, pilgrimages to Juggernaut have been customary for only some 150 years, so that the annals are traceable. Dr. Hunter has gone carefully through them, has conversed with the oldest inhabitants, and found no explanation of the bad reputation of the cult. It is surmised that some early missionary who witnessed the car festival did not understand that the reason why human beings drew it instead of animals is lest one of these should get killed and so pollute the sacred precinct. The man can say if he is ill or exhausted, but not the beast, who might be driven to his death. Shocked by an apparent degradation of humanity, meant to preserve animal life, such surmised missionary, if an accident occurred, might suppose it part of the programme. His physical and moral nerves unsettled might inflate the story, and when this gained currency in missionary meetings and swelled collections, its inflation would hardly diminish. There is an evolution in stories; a survival of the fittest for raising contributions might so develop a Juggernaut accident or suicide that the original witness would not recognize his narrative as told in the tabernacles. Suicide is different from self immolation. There are more religious suicides in England than in India. On the day after the Prince of Wales attended a thanksgiving at St. Paul's for his recovery, I read a paragraph stating that several persons were at one point crushed to death. The item might float like a thistle seed to some far land, and spring up to a belief that in England human victims are offered on the recovery of a prince from illness.—Moncure D. Conway in Boston Herald.

Italians at Summer Resorts.

From what I have seen of well bred, well to do Italians at summer resorts I should say that they take their holidays in ways more sensible than rich Americans. They make far less display in dress and equipage, they keep better hours and avoid excess in exercise and amusements. They show less anxiety to be exclusive in their associations and high toned in their manners. They do not thrust long pedigrees or long purses down your throat. They bravely wear comfortable old clothes. Their kirtles and their titles, their coats and their coats of arms set easily upon them.

Many a fair contessa, whose home in Florence or Rome is an ancient palazzo, with lots of blood curdling family traditions about it, a big gallery of family portraits in it and a family specter or two, takes with her to the baths of Lucca or the seaside far less and less costly a baggage than many a New York belle, with no ancestors to speak of, and only a photographic album of family portraits, going from a specterless boarding house to Saratoga or Long Branch.—Grace Greenwood's Letter.

The wise man keeps a diary. There is no telling when the most obscure person may become suddenly famous, and such a one will find his reminiscences worth their weight in silver certificates.—Harper's Bazar.

THE ONLY FOE.

Wild, threatening sky, white, raging sea,
Fierce wind that rends the rifted cloud,
Sets the new moon's sharp glitter free,
And thunders eastward, roaring loud!

A fury rides the autumn blast,
The hoary brine is torn and tossed;
Great nature through her spaces vast
Casts her keen javelins of the frost.

Her hand that in the summer days
Soothed us with tender touch of joy,
Deals death upon her wintry ways;
Whom she caressed she would destroy.

Life shrinks and hides; all creatures cower
While her tremendous bolts are hurled
That strike with blind, insensate power
The mighty shoulder of the world.

Be still, my soul, thou hast no part
In her black moods of hate and fear;
Lifted above her wrath thou art,
On thy still heights, serene and clear.

Remember this—not all the wild,
Huge, untamed elements have force
To reach thee, though the seas were piled
In weltering mountains on thy course.

Only thyself can harm,
Forget it not! And full of peace,
As if the south wind whispered warm,
Wait thou till storm and tumult cease.

—Celia Thaxter in The Century

THE MAN BEFORE EDISON.

The Original Inventor of the Electric Light—A Lost Idea.

Anybody that chooses and knows how can make incandescent electric lights now. The only person who had any right to prevent them has been asleep for a good many years at the bottom of the Atlantic ocean. Most people think Edison invented these lights, and so he did, but he was not the first. Some years ago, a young man in advance of his age, by the name of Starr, came to Mr. George Peabody with a new invention, asking advice and assistance. Mr. Peabody was not only a philanthropist but a shrewd man of business. He saw at once the possibilities of the electric light, and gladly furnished Starr with the means to go to England and take out a patent, after consulting experts and scientists there. In those days every new discovery had to have the stamp of England's scientific approval to make its way elsewhere. Mr. Starr, like many a genius before and since, was by no means an experienced and cautious business man, so Mr. Peacody engaged a man named King to go with him as his business agent and to conduct the negotiations.

The two men set sail for England, had a prosperous voyage, and met with a flattering reception. The invention was exhibited to the first authorities in the kingdom, was carefully scrutinized by them, and was unanimously pronounced to be a brilliant and successful one. The two men remained for some time in England, and received nothing but consideration and encouragement. A patent for the invention was obtained, but by a usage allowed by English patent law, was issued in the name of the solicitor, Mr. King, instead of that of the inventor, Mr. Starr. The unsuspecting inventor does not appear to have observed this, or made any objection, or at least there is no record that he did so.

The two men started on their return to America. They had been at sea but a very few days when Mr. Starr was found one morning in his berth dead, from some mysterious and unexplained cause. His body was buried at sea, and his companion continued his journey, and presented himself to Mr. Peabody with his report. That gentleman listened attentively to his account of the journey, with its various business transactions and its tragic finale. On concluding his narrative Mr. King asked the millionaire if he would continue to back up the invention with his money and influence. Mr. Peabody's reply was to rise, open the door of his private office where the interview had taken place, and sternly point toward it. The discomfited attorney, without a word, went out through the door into oblivion.

And that is the reason why Edison had to invent the electric light all over again. The invention lay in a stale mate, as it were. It was credited to King, and he alone could develop it, but he had disappeared. It was not known till 1876 that Starr was the real inventor, and even then, as he was dead, and the patent issued to another man, nothing could be done. Finally Edison went to work on his own hook, and thought out his scheme; but the highest English courts have just decided that the King patent anticipated his and makes them invalid. And as the earlier patent has lapsed, the idea, under this decision, is common property.—Once a Week.

Unhappy Facility of Expression.

Some people have such an unhappy facility of expression, combined with slipshod methods of thought, that they are likely to indulge in speech which it would "puzzle a Dutchman" to translate. The "History of Weare, New Hampshire," refers to a loquacious townswoman who reversed the old maxim, and "went ahead" without being sure she was right.

One of her stories was to the effect that her husband sowed some flax, which came up and grew, until the frost struck it and blighted every spear.

Then the worms took it and ate it all up; then the drought took it and killed it all, and when they came to pull it they didn't have half a crop. After that they rotted it, and her husband done out some of it, and it wa'n't good for nothing.

Then they let it lay a year, and it was the best flax she ever see. She used some of it to make cloth for her husband's shirts.

"It was cotton linen cloth. It was tow warp, and the warp was filling, and the blue was yaller, and it was dyed in huckleberry, and it was thick as the table. It wore splendiddly, and my husband liked the shirts so well that he wore them all out in a fortnight!"—Youth's Companion.

Benefits of a Merry Mind.

But who gains through any one's grieving and crying for months over anything? Is it pleasant to visit the friend who is always doing the doleful and pumping from lachrymal fount and treating you to tears? The same strength that pumps up tears can pump up smiles. If the boiler bursts and I am blown up sky high and come down in small pieces, and you can stick me together again and put me on a bed, don't stand around it crying and sobbing and wringing your hands as if your hearts would break. I don't want your hearts to break. But call in a fiddler and set him to work on the "Arkansas Traveler," "Yankee Doodle" and "The Girl I Left Behind Me," or the girl who left me behind in the cold. That'll do me some good.

"A merry heart," saith the Scripture, "doeth good like a medicine." Why? Because a cheerful, merry mind sends from it to you a current of life, health giving element—thought as different from a thought current of gloom as champagne differs from tar. It's a current as real as a current of water—as real as the current of invisible water that in warm weather runs just above the visible water and along with it is drawn from it by the heat of the sun.—Prentice Mulford in New York Star.

Girls are employed as shingle packers in the mills at Bay City, Mich.

THE ARIZONA KICKER.

Ups and Downs of Editorial Life Out in the Far West.

APOLOGETICAL.—We hope our readers will excuse the typographical appearance of the inside pages of the *Kicker* this week. We were working them off as usual on Wednesday, having Joe the Digger Indian as roller-boy, when Judge Shackawacksen made us a call and jumped on our collar. Greatly to our surprise we picked the judge up and mopped him all over the office and flung him out doors. His boot heels, hind buttons, spectacles and tobacco-box flew about and alighted on the forms, and in our excitement we failed to notice them.

The big hole in our editorial on the tariff was caused by a boot-heel. The blurr on the poem entitled: "When Baby Wakes Again," was caused by two hind buttons. Such society items as are unreadable owe their present state to the judge's spectacles. We hope it won't occur again.

NOT THIS EVE.—Our name is being prominently mentioned in connection with the United States Senatorship from Arizona. While we are flattered and feel to step high, we must beg our friends to hold up.

In the first place, we are too honest, sober and conscientious.

In the second place, we are needed at home. We propose to run about 10,000 human coyotes out of this Territory during the next twelve months, and put a thousand others behind prison bars.

While we feel tickled all over and can hardly sleep nights, we can't accept the office nor leave Arizona. Just pass the place along to some other man and leave us to do our work.

A DECEIVER.—We owe no grudge to Colonel Hastings because he once cuffed our ears in the corridor of the town hall. We had proved him a liar, a swindler, and an absconder, and he had to cuff to save his reputation. The Colonel is now seeking the nomination for Sheriff, and is promising, in case he is elected, to secure our town a government appropriation of $250,000 to build a public building. We are actuated only by the kindest motives when we say that the Colonel is a blooming deceiver. He can no more secure a dollar from Uncle Sam than we can borrow one of the hinges from the gates of Heaven. All the influence he has in this world of sin and sorrow is confined to the Red Hot saloon and its crowd of reprobates. Do not be deceived in the castor oil voice of the Colonel.

AN EXPLANATION.—The cause of the *Kicker* in opposing the building of a bridge over Red Horse river, to connect our town with Dutch Hill, is being severely criticised by some of our citizens, who declare that we are opposed to progress and improvements. Such is far from being the case. Any open bridge across the river would be an encouragement to suicides and accidents. When a man gets drunk on Arizona whisky, he either wants to kill some one or jump off a bridge. There are fifty men in town who would go over to Dutch Hill, fill up, and fall off the bridge coming back if it had a railing fifteen feet high.

As to a covered bridge, it would at once be taken possession of by all the old soakers in town who tried to get home, and in a month would be voted a public nuisance. While we just holler for progress and improvement, we can't see our way clear on this bridge question, and shall therefore oppose it until we have a change of heart.

NOTICE.—We have in our possession about forty deeds and conveyances belonging to as many different parties which we picked up on the street last night. They dropped from the coat-tail pocket of our estimable and efficient Register of Deeds as he was weaving his way homewards at a late hour. In the East this would be called a piece of gross carelessness, and the Register would be expected to resign. Out here in the glorious West no importance is attached, and the estimable Register takes an extra drink and pulls another wire for renomination. And the worst of it is that we owe genial Henry $14 in cash and daren't go for him until it is paid.—*Detroit Free Press.*

DRESSING A "COP,"

What It Costs to Provide the Equipment of a Police Officer.

"What does it cost to make a man look like that?" asked a reporter of a dealer in military goods, pointing to a gorgeous police captain

"I don't know that I could tell you just what it costs to make a New York police captain, for we don't furnish many things to the Metropolitan office, but I can tell you what it costs to provide the equipment for a rural police officer. I'll give you the chief items and you can add them up for yourself. Here are the items and the figures:

Cap	$2.70
Helmet	3.00
Belt	2.00
Club (locust)	50
Billie	50
Whistle	75
Lantern	2.00
Bull's-eye	1.00
Patent nippers	1.00
Handcuffs	4.00
Total	$17.50

"That," said the dealer, "is a private's outfit. I have not included clothes, because the uniform is often bought at home by the police of small cities and I could not give exact figures. Of course, the upper grade officers buy rather more expensive outfits. There are belts at $3.50, shields at the same price, batons at from $1 to $2, and a great variety of handcuffs, 'nippers,' 'twisters' and leg irons, some of plain iron and others nickel-plated, that run in price from $2 to $6 per pair. Then if a policeman is a bit of a dandy with an eye for the beauties of the area, there is no telling how much he may waste on fuss and feathers. O, we live on the vanity of other men."—*N. Y. Telegram.*

TROUBLE BORROWERS.

Persons Who Make Themselves as Well as Their Friends Very Uncomfortable.

There is an ancient weather tradition about the month of March borrowing certain days from April, which she pays back, not in the same weather that she borrows, but in one of her own glorious gales, at a later date, and this is perhaps the most poetical expression of the borrowing of trouble that we have. Those who borrow trouble, however, are seldom in the habit of paying it back with the scrupulosity of the month of March in the tradition; they keep it for themselves, they roll it over and let it gather accretion, they make much of it, and they grow so weary with the weight of it that when real trouble comes there is no strength to bear that, and the nervous powers fail at the time when they are most needed.

Is there to be that most festive of all festivals in the family, a wedding, the trouble borrower is sure that the bride is a lamb led to the slaughter, or that the bridegroom is now to be lost forever to the family in being adopted into the new wife's family, and that nobody knows where they will all be a year from that day. Or else the trouble-borrower is sure that the church will be cold and they will get their death, or the dress will never come from the dressmaker's in time, or with the lover's well-known dilatory character, he will be sure to be late at his own wedding. Not even a funeral satisfies this trouble-borrower—an occasion when one might feel as if there were already on the spot trouble and to spare; it certainly could not be expected that any one could be late at one's own funeral, in spite of the feelings of the heirs of rich men who persist in living; yet there as well as elsewhere the borrower will be sure to find reason to anticipate disaster. At the christening, again, it is the borrower who, if not the bad fairy of evil gifts in person, is the one who sees that fairy coming, never by any possibility the bright fairy, the good fairy; and a child does not undergo teething in the family where the borrower makes a home, for which, from the first tooth to the last, trouble is not to be extracted. An urchin can not be sent to school from that family where the borrower does not forsee an overtaxed brain and nervous disease, and it can not stay away from school where there is not at once forecast of a dunce. In business matters it is as bad: this debtor is not going to pay, that creditor is going to be inexorable. In all the concerns of life, in short, the borrower is drawing on the future—always a bankrupt future in everything but sorrow; and even when it comes to death, the borrower illustrates this life with the lurid light of the flames of the bottomless pit, although more often concerned in that light for others than for one's self, it may be said. This borrower of ours extends operations even into the outer affairs of nature. There is never a sunshiny, balmy day of south winds but it is a weather-breeder, and the borrower sees no sun to-day for the cloud and storm of to-morrow. Are the first buds early, the bluebirds here, and all things promising a genial spring?—then it is untimely weather, and the premature buds will all be nipped by the frosts to come, and there will be no fruit. On the other hand, has the bad weather held its own till late, knowing apparently, with that strange intelligence of the elements, that everything will come on in the stronger and longer sunshine with about the same celerity as if it had not had its own freer and lingering play, the great law of compensations acting with inanimate as with all other of the departments of nature?—why, then the summer is never going to be long enough to ripen anything, and if there should not be a real famine in consequence, yet prices will put food out of the reach of the poor, and the balance of trade between the continents will be disturbed, and there will be a change in the rate of discount of the Bank of England.

Nobody is made so uncomfortable by all this borrowing of trouble as the borrower himself, although, of course, everybody in the region is disturbed and vexed by the habit. It is a habit that takes on serious freaks sometimes.—*Harper's Bazar.*

BEST FINISHING WOOD.

Why Mahogany Is More Useful Than Cherry, Oak or Ash.

As is known to every wood-worker, mahogany has no equal for durability, brilliancy and intrinsic value for any work which requires nicety of detail and elegance of finish. Cherry, which is a pretty wood for effect and extremely pleasing when first finished, soon grows dull and grimy-looking. Oak, which has been so much used of late, is attractive when first finished, but experience teaches that it does not take many months to change all this, and instead of a light, fresh-looking interior, one that has a dusty appearance is presented, which no amount of scraping and refinishing will restore to its original beauty. What applies to oak is yet more applicable to ash. Mahogany, however, seems to thrive best under the conditions which are detrimental to these other woods. At first of a light tone, it grows deeper and more beautiful in color with age, and, although its first cost is more than these other woods, yet its price is much less than is popularly supposed, and the only objection that has been urged against it has been cost. What is more valuable, however, and what makes mahogany in reality a less costly wood, is the fact that, unlike the cherry, oak or ash, it is easily cleaned, because it is impervious to the dust or dirt, while it does not show wear, and, instead of growing duller, grows brighter and more pleasing in appearance.—*Builder and Woodworker.*

NO REPEAL

There are evidences that something like a conspiracy is hatching for the repeal of the Chinese Exclusion Bill. The Examiner and one or two more papers in San Francisco are keeping up a sort of running fire against the bill, and alleging that the fruit and farming interests of the State cannot be run without Chinese. Great landed estates cannot be run without slavery in some form or other. If the laborers on such great estates are not slaves in name, they are in fact. It is a further fact, that when the soil of any country comes to be owned by a few great land holders, free institutions quickly give way to aristocracy and monarchy. This was the experience of ancient Rome; and when the free German tribes that conquered Rome permitted great landed properties to grow up among them, it was not long till all their freedom was lost, and the assaulaged and iron tyranny of feudalism reduced them to the most degrading slavery. If the Chinese are excluded, we may have fewer millionaire owners of great estates, lording it over swarms of vassals; but we will have thousands of comfortable farmers tilling their own fields and gathering the fruits of their own orchards and vineyards with their own hands. It is not the few wealthy and refined, living in luxury, who make states glorious and powerful; but the many living in comfort and intelligence.

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay."

The intelligent, brave and patriotic small farmers of California would soon disappear if hordes of Chinese were suffered to flock into the country. When the Exclusion Act is mentioned, let the cry be "No Repeal."

In most, perhaps all human beings there is some moral trait that correspond to the worst traits in the characters of the lower animals. There are men of so filthy a nature that they take a pleasure in uttering the vilest and most degrading language in the presence of others, particularly of young men. Such brutal men are like skunks, scattering an odor of foulness wherever they go. He is the shallowest and most contemptible of all fools who thinks he is gaining popularity by mouthing strange oaths, or retailing filthy stories to raise the broad laugh that marks minds as empty as his own. Even the ignorant and clownish dolts that appear to be amused by filthy stories and strange, uncouth profanity despise the utterer of such rubbish. Nor rank nor fortune makes the gentleman; he is the finest gentleman who is the gentlest man; and to be such is within the reach of him who in the sweat of his face eats bread as surely as of him who is born the heir of millions. He lives not in vain, no matter how humble his fortune may be, who by word and deed makes those around him have a higher appreciation of the dignity of manhood.

Los Angeles papers report that some time this month a party of capitalists, about twenty-six in number, will arrive at that city. They are mostly head men of banking and other monied institutions of the East, and represent about fifty million dollars. They are also members of the International Loan and Trust Co., of Philadelphia, and propose to establish a California directory of five members, to control their business here, if they find California valuations and securities on a basis that is safe for debenture loans at low interest on long time. There is no better security in the State than Inyo county bonds; and if the proposed plan should be carried out by these capitalists our bonds would readily be taken at lower interest than we now pay. If a deputation shall go from Owens Valley to Los Angeles to attend the Convention called to meet there on the 15th inst. they could perhaps do something useful for the county in this direction.

DESERT LAND FINAL PROOF.

D E No. 250.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL.,
December 13, 1888.

Notice is hereby given that Augustus C. Stevens, of Lone Pine, Inyo county, California, has filed notice of intention to make proof on his desert land claim No. 250, for the N E ¼ of S E ¼, E ½ of N E ¼ of Sec 2, N W ¼, W ½ of N E ¼, W ½ of S E ¼, S W ¼ of Sec 1, Tp 14 S, R 35 E. M D M, before the Register and Receiver of this office at Independence, on Tuesday, the 29th day of January, 1889.

He names the following witnesses to prove the complete irrigation and reclamation of said land: John Lucas, James R. Moffett, Allen Kenyon and Joseph V. Skinner, all of Lone Pine, Inyo County, California.

JOHN W. P. LAIRD,
Register.

A STUDY OF SUICIDE

WHAT LIFE RESCUER O'BRIEN SAYS ON THE SUBJECT

Observations of a Chicago Man Who Has Saved Thirty Human Lives—People Who Want to Drown Themselves—Methods of the Genuine Self Killer.

"When I am free and at leisure I go to Lincoln park. The lake shore there is my field of operation. Most of the drownings take place in the lake off Lincoln park. Dozens of young people are out boating there every day, and once in awhile a life hater turns up, determined to bury himself in the waves. For one who is really tired of life it is indeed a good place. The water is clear, cool and inviting. The confusing roar and noise of this busy city life is far off. Peace, tranquillity and rest reign all around. The place is just made for life haters who, you know, are often capable of walking miles in order to terminate their life in a shady and green spot. Along that very shore I rescued about a dozen people, and at least five of them were would be self murderers.

"During the many years I devoted to this peculiar occupation of mine—that is, to saving the drowning—I observed that not only place and time but also the weather has a great deal to do with the occurrence of drownings. Those who drown themselves in the spring and autumn usually have a weakness for fair weather. They are visionaries suffering from inborn melancholy, and often poets with ruined, dissipated talents. The great majority, however, are poor creatures for whom sunshine is rather invigorating than productive of a desire to die. They think of dying for a long time, but they do it as soon as the weather changes for the worse. If the weather is too bad, if it rains or snows heavily, they will wait. They do not like too bad weather.

"The days on which the drownings and, I suppose, suicides in general are most numerous, are in most cases those on which the sky is enveloped in gray clouds. Everything then seems gloomy and melancholy. An inexplicable heavy pressure upon the breast makes the blood flow slowly and lulls the brain into a dull stupor. The thoughts get confused. Deep sadness seizes the unfortunate sufferers, and whatever unpleasant and bitter their past life contained forces its way out of the depth of recollection, and bursts forth in one agonizing feeling of despair and disgust with the world. Those who try to plunge into the hereafter on such days offer grim resistance, when one comes to their rescue, and without preliminary precautions to rescue them is a dangerous undertaking.

"Many of those who resolve to drown themselves often come to the spot they select for the accomplishment of their resolve, long before taking the final step. They walk up and down along the shore, gaze at the sky, look around shyly, then they begin to stare at the water, endeavoring to measure its depth. When they are about to make the fatal movement they halt suddenly and listen. The chirp of a bird, the splash of a fish, the whistle of a steamer, any sound, any trifling matter unsettles their resolve. They turn round all of a sudden and walk quickly away. A few days afterward they come back and seem to reproach themselves for having been so cowardly before. Instead of walking up and down they now remain standing on one spot. They stare at the water. In their eyes there is not a spark of a thought. They have the appearance of somnambulists. They can neither see nor hear anything. Suddenly, it seems, something startles them. The hat flies from the head, the coat from the shoulders, and—there—they are struggling with the waves.

"Most of them appear on the surface before they finally go down. A genuine self killer will fold his arms, shut his eyes and go down without any noise. He is half dead already before the unavoidable apoplexy strikes his brain. Those, however, who go into death with some hesitancy, at this dreadful moment are overcome by a powerful fondness of life. They cry and kick and trample with their arms and legs, and when one comes to their rescue they cling to him like a polyp. To die is not so easy a thing after all, and he who attempts to take his own life will not soon repeat his attempt.

"Even the hours of the day are of great importance to the suicides. Generally they choose the afternoon hours, when it begins to grow dusky. Only a small proportion suicide in the morning. At daybreak, when only the street cleaners are at work, in Chicago as well as in other large cities, you can sometimes notice people of all ages and stations of life walk down to the lake or to the river. They look pale and weary, their hair is confused, their clothes in disorder, they look as if they had just come out of their bed. They are gamblers who have lost all their possessions in one night, or embezzlers who have spent the money of their employers in one great debauch, or thieves who are escaping from the police. There they stand at the edge of the water and sigh. Yesterday they were happy and free from all care, today a dreadful end awaits them.

"The darkness vanishes more and more, the city awakens, its noise becomes louder and louder. They sit down and let their legs hang over the surface of the water. Tears fill their eyes, they sob quietly. It is so difficult to die, especially when one is young. The sun has risen high upon the horizon. People hurry down town from all directions. It strikes 8, 9 o'clock—now, perhaps, the embezzlement has been discovered, the police are being notified—another hour passes quickly away. There is no hope left. They look around again and again, then suddenly they shut their eyes and glide down into the water. They think it is all over, but somebody comes to their rescue. When they are brought ashore and they regain consciousness, they send forth shouts of joy. Whatever may come, disgrace or imprisonment—'Thank God,' they repeat, 'I am alive, I am alive!'"—Chicago Journal Interview.

The Musquito a Blessing.

A lecture was recently delivered at Madras, India, on that interesting and familiar pest, the musquito. The lecturer, Mr. H. Sullivan Thomas, asserts that it is only the female musquito that does the biting. He considers the musquito a most useful pest, seven-eighths of its existence being devoted to the service of men and only one-eighth to their annoyance. It exists in the larval state twenty-one days, and during that period engages in sanitary work with ardor and thoroughness. Wherever there is dirty water, wherever there is a filthy drain, there the musquito larvæ are to be found in hundreds, voraciously devouring the contaminating matter.—New Orleans Times-Democrat.

Advance of Civilization.

Don Alphonso, brother of Don Carlos of Spain, traveling as "Don Juan de Huelva, Count de Bourbon," is in Turkestan and is astonished at the progress made there along the Transcaspian railway. At Merv, which five years ago was a crowd of felt tents and mud huts, he found brick houses and macadamized and paved streets, and at the railway station at Bokhara was a luxuriously fitted up buffet with a young and pretty Russian barmaid speaking French and German as fluently as her native language. Twenty years ago no Christian would have been safe in Bokhara.—New York Sun.

HOME EDUCATION.

PLAY SHOULD BE A PART OF THE HOUSEHOLD SYSTEM.

Hereafter Education Will Mean the Culture of the Whole Body—Damage Sometimes Done in the Schoolroom—Moral Atmosphere of the Home.

Children should not be compelled to take to the streets for sport. It should be a part of the household system to afford play, and to do it as surely and systematically as books and food. We have a good deal yet to learn about play. We should have our hours for sport and relaxation when the whole household join in games. As home education increases, and it must increase, these hours will be doubly necessary. I would not allow a child to study or read over an hour consecutively. Then let him play and exercise his body one hour. At what age should we cease to play? If fools, we may stop early in life. Only wise people never cease to love and enjoy games.

But the play room is not all. This is the age of manual culture. The grandest of innovations has occurred. Hereafter education will mean the culture of the whole body—handcraft as well as headcraft. It follows that each house that is intended for a home should have its provision for the education of the hand—a workshop, a tool room for every member of the family to find his chosen occupation. If necessary, a separate building should adjoin the house. Where there are five children there may be five separate occupations chosen. One of mine prefers carpenters' tools and engineering, another printers', and a third cares mainly for horticulture.

OUR SCHOOL SYSTEM FAULTY.

I am now advocating such household appurtenances purely on the score of health. Our school system is a blunder. No child should study from 9 till 12; and especially in rooms where they must sit. A child at study should, much of his time, be on his feet, or reclining if he chooses, and changing about. When you add the books taken home for evening study, you have shown up our common method, whereby, to perfection, we destroy the health, vigor, beauty and character of our children. Every one is damaged, and the majority are spoiled. I insist upon play as a duty, as a part of life, as in fact itself a part of study. A teacher of play would be far more sensible than the piano at $2 to $4 a lesson.

How about dancing? As a matter of health it is generally of no advantage whatever. It is no sooner acquired than night is turned into day, and then the play is carried to such extremes as to be disastrous. I have watched this matter from a physician's standpoint, and object totally to three or four hours and especially to six or eight, devoted to hilarious dancing, and those hours the ones that nature devotes to sleep. There is another point I cannot overlook. It is the close contact of bodies in round dances—a contact unwholesome, purely from a physical point of view. The moral effect others may discuss, but I object to any delicate person being borne so closely into the atmosphere of grosser, coarser ones. The physical effect is not likely to be understood, but it is seriously evil. I do not, therefore, care for dancing, unless conducted as a part of home sport, as it is not likely to be.

A GOOD MORAL ATMOSPHERE.

It is, however, folly to talk of a healthy home that is not charged with a good moral atmosphere. I assure you the moral atmosphere is as real and tangible and efficient as the physical; and those who refuse or neglect to consider it will suffer accordingly. It is impossible for us to have about us, in close intimacy, those of gross temperament and physical sensuality, and not feel the effect on our bodies as well as on our minds. This holds good, of course, of our own relation to ourselves. If we do not sustain a spirit of self-control and manly aspiration in our souls, our bodies are diseased as a consequence. One-half of all disease is the result of unsanitary mental conditions. Uniform honor, good faith, manhood, temperate desire, kindliness, will have a powerful effect in sustaining vigorous physical health.

I have a brother physician who insists that if all people would keep in the best of humor for one hour before eating, during meals and for one hour after, they would never be troubled with any disorders of digestion, or with headaches. He is a trifle crochety, but he is not far from right in his valuation of good temper as a foe to dyspepsia. At meal time it is peculiarly important that all should be decorous and kindly. The fashion of haste and fret at our meals is an indication of nervous irritation, and affects digestion directly. But in all other ways a house should be delivered from the destructive influence of immoral or unmoral habits. An habitual scold is not only a disagreeable ternagant, but a destroyer of the physical health of her children. The effect on moral character is tallied by the effect on the features of the young. I have supposed some to be more sensitive to moral atmosphere than others, but on larger experience I am satisfied that all are influenced in this way, and to their serious detriment. The art of building a healthy home is dependent upon the art of being ourselves pure hearted and honorable, generous, just and adaptable.—M. Maurice, M. D., in Globe-Democrat.

Some Curious Garden Designs.

The art of the florist has made wonderful advances of late. Thousands of persons have visited the Danvers (Mass.) hospital grounds the last few weeks. The object in view by the many strangers is to see the marvelous flower beds designed and arranged by the florist and gardener, Etore Tassinari, which are now in prime condition and rival anything of their kind in the United States.

The largest design is a Chinese pagoda, seventeen feet high, with a dome supported by six pillars, and an archway beneath high enough to pass under without stooping. There are three fountains and thirty varieties of plants. The front of the base has a calendar of growing plants in portable boxes and the back a shield, flags and draperies. Florists from far and near have pronounced this design the best they ever saw. A solar clock or sun dial attracts much attention, as it accurately tells the time of day by a pole of growing plants placed at an angle of 47 degs. and pointing to the north star. The shadow falls on floral numerals in the rim of a horseshoe shaped bed of plants. There are numerous beds of lesser note, and several photographs have been taken of the principal ones.—Troy Times.

Prominent among the flower brooches in plain gold is a large apple blossom in Roman finish. In the center is a handsome canary diamond while fifteen small whitestones are set in an irregular circle around it.

Not an Agreeable Topic.

A Chinaman dislikes to say that his friend is dead, but will tell you that "his name has been added to the muster roll of ghosts," or that "he has become one of the ancients." "He has returned to the shades," "he has taken farewell of the world," "he has gone a long journey," are expressions all very frequently used when speaking of the dead. The matter is not always treated with reverence, however, for they will sometimes say: "He has swallowed his breath," or "slipped his skin." "The mountain has collapsed" refers to a dead emperor, and "the dream is over" means that a prince is dead.—Boston Budget.

THE ARID LAND AREA.

RECLAIMING WASTE REGIONS BY MEANS OF IRRIGATION.

Agricultural Lands of Colorado Which May Be Made Immensely Productive. Atzec Canals and Irrigation Ditches. The Rain Belt—Farmers' Testimony.

Mr. T. C. Henry, formerly of Kansas, and now one of the most prominent men in Colorado, who has been instrumental in building several large canals in the state, in discussing this question, says: "Of the 40,000 square miles of the territory in this state east of the foothills less than 3,000 square miles are actually and systematically formed. It is my deliberate conviction that were all the water of all the streams covering these plains absolutely preserved for domestic and irrigating purposes and applied with the skill and economy displayed even in India or Egypt, we could irrigate and make fruitful every acre of this immense area—an area capable of supporting an agricultural population, urban and rural, of 3,000,000 people, and yet it would be less than one-half as densely populated as Belgium or the agricultural sections of France.

"The area east of the mountains is practically all agricultural land, and if peopled as densely as is Belgium, would contain a population of more than 8,000,000 of people. Or if provided with water for irrigation, skillfully applied, each forty acres would support a family of five persons, aggregating a population of more than 3,000,000, not including the directly dependent urban population. On the same basis, the great San Luis valley would sustain a population of 1,000,000; the San Juan country in the southwest nearly 1,000,000; the Gunnison and the Lower Grande, 750,000, and the White, the Yampah and the almost unknown Northwest, 1,000,000 more. Before the close of another century there will have been elaborated a system of agriculture surpassing that wonderful civilization which Moorish power planted in the irrigated valleys of Spain ten centuries ago, maintaining the millions then populating our grand commonwealth. There are not less than 30,000,000 acres of agricultural lands in this state which only need the application of irrigation to be made as valuable and productive as any already cultivated."

Carry these same predictions into western Nebraska and Kansas, into Wyoming and New Mexico, Idaho, Utah and throughout the west, by utilizing the waste waters saved in reservoirs, and the future greatness of the west is almost inconceivable. These things are possible. The ruins of the Aztecs and Pueblo Indians, and great nations that are only known in the dim past by the desolation of mighty cities, tell us how densely populated were vast regions in the west in an almost unknown antiquity. With these ruins are old canals and irrigation ditches, and in some of them there is said to have been used a kind of cement that is now a lost art. These ruins are found in arid sections where it would have been impossible for a great population and cities to have thrived without vast irrigation schemes. These great nations have been swept away. How? No one knows, but from the dim borderland of that almost hidden antiquity there come up facts that when first considered seem almost like a dream. But it is history, and let history repeat itself. The public domain will soon be a thing of the past, and the present must look to the future, and if this great water question is grasped by our statesmen as it should be, it will lay the foundation for still new and mighty commonwealths.

Is the rain belt gradually moving westward? This is a much disputed question. Irrigating ditches make more surface water, and hence there is more evaporation. That proposition cannot be denied, although it must be admitted that the rain does not always fall in the same locality where the water was taken up by evaporation. It is also claimed by some that tree planting does not materially increase the rainfall.

In the January number of Science, Henry Garnett says: "Over 100,000 square miles of almost treeless prairie in Northern Missouri, Southern Minnesota and parts of Illinois and Indiana have been reforested since their settlement, and furnish an example of reforesting unequaled elsewhere upon the face of the globe, and yet the rainfall has not increased. On the other hand, there have been more acres of land denuded of forest in the United States within a century than anywhere else in the world, yet there is no evidence of a diminished rainfall."

Professor Sargent, of Harvard college, says: "The removal of a forest from any region will not diminish the amount of rain falling upon it; nor can the increase of forest in a slightly wooded or treeless country increase its rainfall. The gradual drying up of countries once fertile, within the history of the human race, but now barren and almost uninhabitable, must be traced to gradual geological changes, of course entirely beyond the reach of human control, and not to the mere destruction of the forest."

But there are able men who have thoroughly studied the question and who state that the rain belt is surely coming westward. Among the number are Professors Wilber, Angley, Snow, and ex-Governor Furnass, of Nebraska and Kansas. The observations taken at Fort Leavenworth during a period of thirty-eight years are said to indicate an annual increase in the rainfall of 5.21 inches; thirty years at Fort Riley, twenty-four at the State Agricultural college, and seventeen years at the State university, Lawrence, Kan., are said to give figures showing an increase in the rainfall of 3.05 and 3.06 inches per annum. The data is very valuable, and seems almost indisputable.

But there is still a stronger authority, the farmers themselves. In Western Kansas and Nebraska and Eastern Colorado, farmers are now raising crops on what was formerly known as the Great American Desert. They claim that there is a great future for that section, and they raise crops without irrigation, depending solely on the rainfall. And so while some scientists are doubting the statement that the rain belt is coming west, farmers are raising crops. If, in that section, they can raise the cereals without irrigation, so much the better, but there are many millions of acres of land that can never be made productive without irrigation, and let us have reservoirs and great canals, and from what are now arid regions in the west new empires are possibilities.—Will C. Ferril in Kansas City Journal.

The Cause of It.

First Citizen—Your wife seems to have aged greatly of late. What is the matter?

Second Citizen—She got that way waiting for change in one of our big trimming stores.—Pittsburg Bulletin.

Not Truly Converted.

Citizen—Well, deacon, I s'pose the camp meeting was a great success?

Deacon (dubiously)—Well, I dunno; there were forty-eight converts.

Citizen—Why, that's glorious!

Deacon—Ye-es; but thirty-seven of 'em owe me yet for root beer an' sandwiches.—Boston Herald.

Boilers Without Rivets.

A German manufacturer is now making a boiler in which no rivets are used. The joints are welded, and the cost is said to be slightly in excess of the rivet work.

Working Csses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5 00 per evening and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland, Maine

A NEW DEAL!

CERTIFICATE OF CO PARTNERSHIP.

STATE OF CALIFORNIA, }
County of Inyo. }

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, under the firm name and style of Thomas & Hill, that the full names of all the members of such partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

In witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA, }
County of Inyo. }

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill, known to me to be the same persons described in whose names are subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL] P. H. MACK,
County Clerk and ex officio Clerk of the Superior Court.

By A. K. Rogers, Deputy.

[ENDORSED.]

Filed November 28, 1888. P. H. MACK, County Clerk.

PALACE SALOON,

FIRST-CLASS RESORT.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 13 cents for our 174 page pamphlet. Address, GEO. P. ROWELL & CO'S NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work; either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us, and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. Address TRUE & Co., Augusta, Maine.

SATURDAY, JANUARY 12 1889

John Eddy is so far recovered as to be able to be on the street.

Mr. R. Hessian was down from Big Pine at the beginning of the week.

The Sierras are already covered with snow and a good promise of more.

P. W. Forbes, late District Attorney, intends returning to his old home at Bishop Creek.

Mr. S. J. McMurry came down from Big Pine last Monday and was in town a day or two.

Hon. Trenmor Coffin, of Carson, has been elected Speaker of the Nevada Legislature.

Charley Levy came down from Bishop Creek last Monday and has been in town during the week.

Dimmig was acquitted at San Francisco of the murder of Benhayon. This was the second trial.

Lew Payson has packed out a lot of ore from the Trade Dollar mine, in the Deep Spring District.

A reverberatory furnace for desulphurizing gold and silver ores has been completed at the Reno reduction works.

There will be horse racing at Big Pine on the 22d of next month. Jessie James and Dandy Pat are matched for a half mile.

J. V. Skinner will clear and seed about fifty acres on his location at Georges Creek. His land is watered by the Stevens ditch.

Mrs. Elsie Parish, who has been dangerously ill with pneumonia, is now out of danger. Drs. Woodin have been attending her.

Ed. Walker has been reappointed receiver for the property at issue in the Broder-Conklin case. The case will soon go to trial.

Mr. John McSweeney has gone on a visit to Yolo county and will be absent about three weeks. They say John will bring her back with him.

A land contest between A. J. McMurry and William Blake, of Big Pine, was carried to Washington and a decision has been given in favor of Blake.

Ed Crocker says the alfalfa fields around Big Pine afford fine living for cats. The gophers and mice that the pussies catch keep them fat and sleek.

All the furnaces in Eureka, Nevada, are closed down. The suits begun against the miners and furnace men for cutting scrub pines for fuel is ruining the country.

The trial of Frank McTigue, who shot and killed Charles Lenaman, the Assistant Postmaster at Silver Peak, Esmeralda county, began at Hawthorne yesterday.

The bullion product of the Con. Virginia mine, at Virginia City, Nevada, was for the month of December, $198,713.68. This does not look as if the Comstock was played out.

Mr. McNett, of Fish Lake Valley, was in town at the beginning of the week. The Valley is minus 247 pounds of good solid bone, flesh and muscle while Mr. McNett is away.

Harry Hartshorne has been very ill for many weeks at Bishop Creek. Dr. Woodin was called recently and is now treating him. Harry is improving nicely the past few days.

In a recent letter from Will Graham, dated at Vacaville, he says the prospect for a good season there is excellent. More than half the usual rainfall for the season has already fallen.

A learned professor will lecture the students of the university of California on "the improvement of wild fruits." The next thing in order will be a disquisition on taming wild oats.

Mrs. Mary Tynan came over from Calaveras county recently and is visiting with her father, Mr. Richard Hessian, at Big Pine. Mrs. Tynan looks prove that the climate of Calaveras agrees with her.

The G. A. R., it is said, intend to give a grand ball at Lone Pine on Washington's birthday. A masquerade at Bishop Creek is also on the tapis. A dance and horse race at Big Pine on the same date is talked of.

At his place at George's Creek, Mr. John Shepherd has prepared ground for setting out a new orchard. George's Creek valley will be famous for its fruit; it is one of the very best fruit growing sections of Owens valley.

Travelers over the C. & C. railroad will be much gratified to know that the Nicholson hotel building has been moved down near the railroad station. Passengers who are forced to lay over will now have comfortable quarters.

Hon. A. C. Cleveland, of Nevada, will visit Inyo the coming winter to look after the ranch and ditch property of Mr. and Mrs. Joseph J. Stewart, Mrs. S. being in too poor health to return to Inyo at present. Mr. Cleveland is a brother of Mrs. Stewart. Mr. Stewart likes Inyo climate, and as a farming country thinks it cannot be beat.

Samples of the copper ore now being taken out at the Alabama Hills by Isaac Hitchcock carry 27 11-17 per cent. copper and 28 2-5 ounces silver per ton. This would make the value of the ore about $90 per ton. The ledge continues to show up well and appearances indicate a large ore body.

The owners of the Stevens ditch intend to incorporate soon. This will enable them to put land and canal stock on the market better than would be possible as private individuals. The property is certain to become very valuable. A great deal of improvement has been made on the canal this winter; it is now in fine condition and will carry a large volume of water.

J. C. Colgar was killed last week at Candelaria under suspicious circumstances. The house in which he lived was burned and the charred remains of Colgan were found in the ruins. A bullet hole was discovered in the skull. It is surmissed that Colgan committed suicide and that the house caught fire in some way at the moment he killed himself. The wife of Colgan had gone to San Francisco a few weeks before his death.

Delegates to Los Angeles.

Yesterday morning C. Mulholland and W. S. Enos left Independence for Los Angeles, by way of Mojave. They go as delegates from Inyo county to a convention called to meet at Los Angeles next Tuesday. The object of the Convention is to form a league of all the Southern counties for the purpose of promoting the building of railroads, irrigating canals, placing city and county bonds at low rates of interest, and all such other enterprises and objects as may greatly benefit the Southern part of the State. The capitalists and business men of Los Angeles are very desirous of having railroad connection with Owens valley, and this will be an object to which the delegates will give most of their attention. Another subject they will give a good deal of attention to, will be the establishment of a line of freight teams and mail stages from Mojave. The delegates will do all in their power to secure benefits for the whole of Owens valley; they are not likely to get back home sooner than three weeks.

Farewell.

Four years ago when Mr. S. G. Gregg went out of office a farewell party was given him and his family. That was one of the pleasantest social gatherings ever had at Independence. Now at the close of another term of two years in the same office, another farewell party was given him and his family and Mr. P. W. Forbes, the retiring District Attorney. The company met in Mairs' Hall at an early hour on Wednesday evening. Mr. Bertrand Rhine was Master of Ceremonies, and conducted the dancing, keeping everybody in lively motion up till near midnight, when supper was announced at the Norman House. Of course this was worthy of the occasion and was done full justice to. After supper dancing was resumed and continued till about three o'clock in the morning. Many who had been at the party four years ago were present on this occasion; and pleasant recollections of the past but brightened the enjoyment of the present.

Fruit Pests.

Recently while Mr. Jonathan Brown was trimming peach trees he found some twigs thickly covered with white objects that appeared to be eggs of an insect. A branch was sent to the State University at Berkeley with a request for information on the subject. The following answer was returned.

STATE UNIVERSITY,
Berkeley, Cal.
Jan. 5, 1889

MR. C. MULHOLLAND—*Dear Sir:* The encrustations on the twig which you send are the eggs of the katydid (probably microcentrum retinois). It is an insect very like a grasshopper, from 1½ to 2 inches long and of a green color. The insect eats the leaves of fruit trees but fortunately does not occur in great numbers and therefore does not do much harm. The best thing to do is to cut off and burn the egg clusters. Yours etc.,

E. J. WICKSON,
Entomologist.

Interested Children.

Last Monday at noon Mr. S. G. Gregg, the retiring Sheriff, had $26,000 counted out to pay over to the County Treasurer. Just then the school children were passing and it occurred to Mr. Gregg that the sight of so much coin would interest them. He called them all into the office and let them examine the piles of money till they were satisfied. The children appeared to be much interested in what was to them an unusual sight. Perhaps there are not many men who, when going out of office, would have thought of interesting or amusing a lot of children. It is the never failing kindness of heart shown by S. G. Gregg that wins him so many friends; and once his friend always his friend. Going from Independence he leaves not an ill wisher behind him, but on the contrary the good wishes of everybody go with him and his family.

An Interesting Paper.

The issue of the Los Angeles *Times* for the new Year would do credit to any city in the United States. It is a paper of unusual interest and well worth preserving as a reference on all matters pertaining to the soil, climate, productions and value of land all over Southern California. Speaking of the extension of the C. & C. railroad the *Times* says: "The products of Owens Valley would find a market in Los Angeles and immigration would be greatly increased. Inyo county being on the same side of the great mountains as Los Angeles, possessing many of the same qualities of climate and resources, when the surveyed railroads shall be built between them the interests of the two places will become allied."

An Heir Wanted.

A few days ago the Postmaster at Independence got a letter from S. D. Hurst, Louisville, Kentucky, making inquiry about Leslie Hurst, brother of the writer of the letter. An uncle died some time ago and left some money to Leslie Hurst, and the administrator wants him to claim his inheritance. Any one having any knowledge of the present whereabouts or fate of Leslie Hurst please address S. D. Hurst, Louisville, Kentucky.

Mrs. James G. Blaine, Jr., has signed an engagement with Mojeska. She alleges that her husband has deserted her and she is compelled to go upon the stage to earn a living for herself and baby.

What the tenderfoot tourist expends on a trip to California he gets back after his return home in raising poultry and eggs for the California market. San Francisco has consumed 100 tons of eastern turkeys since Christmas, for which she has paid double and treble prices.

Phillip Gehrig is constantly making improvements at the Pioneer Brewery. His latest work is building a large cooling house where he can keep hundreds of dozens of bottled beer in the hottest summer weather. Phillip will be able next summer to supply his customers with beer altogether as good as the best imported.

BUDDING, GRAFTING, TRANSPLANTING.

Having had many years experience in the care of trees and vines in this and other States and Territories, I thoroughly understand Budding, Grafting, Transplanting and the treatment of diseased trees and vines, and only need a trial to convince you of my fitness. Prices reasonable. Apply at this office.

CHAS. F. CUSACK,
j-12 4t Independence, Cal.

NOTICE.

Notice is hereby given that from and after this day I forbid any person or persons, or firm, from trusting or giving credit to my wife, Jenney Symmes, either in the State of California or out of it, for I will not be responsible for any debt that she may contract.

J. W. SYMMES.

Independence, Cal., Nov. 6th, 1888.

FREE $85 solid GOLD WATCH sold for $100 on sight lately. Best $80 watch in the world. Perfect timekeeper. Warranted. Heavy Solid Gold Hunting Cases. Elegant and magnificent. Both ladies' and gents' sizes with works and cases of equal value. ONE PERSON in each locality can secure one FREE. How is this possible? We answer—we want one person in each locality to keep in their homes and show to those who call, a complete line of our valuable and very useful HOUSEHOLD SAMPLES. These samples, as well as the watch, we send free and after you have kept them in your home for 2 months and shown them to those who may have called, they become your own property. It is possible to make this great offer, sending the SOLID GOLD watch and COSTLY samples free, as the showing of the samples in any locality, always results in a large trade for us after our samples have been in a locality for a month or two. We usually get from $1000 to $5000 in trade from the surrounding country. This, the most wonderful offer ever known, is made in order that our samples may be placed at once where they can be seen, all over America. Write at once, and make sure of the chance. Reader it will be hardly any trouble for you to show the samples to those who may call at your home and your reward will be most satisfactory. A postal card on which to write as costs but 1 cent and after you know all, if you do not care to go further, why no harm is done. But if you do send your address at once, you can secure FREE one of the best solid gold watches in the world and our large line of COSTLY SAMPLES. We pay all express, freight, etc. Address GEO. STINSON & CO., Box 412, PORTLAND, MAINE.

English and American Women.

English and American girls bear off the palm among the nations of the world. There is, however, a difference between their respective qualities of beauty. I have elsewhere sufficiently portrayed the sweet and coy beauty of our American girls not to tell them the whole truth on this occasion. The English girl is thoroughly active in her pursuit of healthy exercise; she walks, and runs, and plays lawn tennis a great deal; riding, if she have the means, is one of her most favorite amusements; while boating and tri cycling is eagerly sought whenever opportunity occurs. Our American "rosebuds," on the contrary, have a very trying climate to contend with; they take too little exercise and too much iced water.

The result is that English girls are able to bring a more roseate bloom to their cheeks, to walk longer distances and to stand much more fatigue; they are, in fact, more robust and have better developed figures; and although there are, no doubt, in New York, or in any other large city of the United States, a dozen women as perfectly beautiful in form and face as any chiseled by the greatest artists, our American girls are in the main less bright in color, more delicate and pale than would otherwise be the case if they more steadfastly resorted to the invigorating means of health, outdoor exercise, long since adopted by their English sisters, and to which, doubtless, the latter owe their exquisite forms and also the fact that they remain youthful in appearance much longer than our compatriots; in fact, an English woman of 40 looks younger than an American woman of 30 years; of course I do not now refer to women of the working class.—Frank Leslie.

Russia's New Railway Route.

The Siberian Pacific railroad has not yet been commenced, and already a new Siberian railway is projected. It will be called after the river Obi. Its connection with the bed of that stream and with a suitable port to the west of Walgatz island will open a double new road to Siberia by land and by water. It is proposed to "circumvent" the mouth of the river Obi, the peninsula of Yalmal, and the Kara sea, which are difficult of access, owing to the masses of drifting ice. The new route will only be 400 versts long, taking a northwesterly direction from the mouth of the river Obi to the Walgatz sea, in a bay of which a harbor is to be built. The site chosen for this harbor is sheltered from the wind by the Pae-Choi mountains.

The country being level and well studded with forests, the construction of the line will offer little difficulty. The entire cost, including the harbor, is estimated at 20,000,000 rubles. Under existing conditions the transport of merchandise to Barnaul, via Tiumen, Perm and St. Petersburg to London takes three months, whereas by the new line two months will be saved. Western Siberia produces annually 30,000,000 Russian poods of wheat. The opening of the Obi line will materially increase commercial intercourse with the west, and be the means of supplying the European market with wheat at a considerably lower price than that produced at home.—Paris Cor. London Telegraph.

Bond of a Bank Messenger.

"It would be difficult to convince a person that there was a single walk of business life which was not overcrowded," said the bookkeeper of a down town bank. "But in our business there are always places open for alert young men as messengers. The reason why the demand is always greater than the supply is on account of the large security required by the bank. The messengers, who have certain districts to cover and who handle large sums of money every day, are required to furnish bonds for $10,000. The salary is $600 per year, not counting the bonus which every bank pays all its employes around the holidays and which amounts in their case to $200.

"There are many honest young men who would look upon such a job as a godsend, but they are unable to furnish the bond, while those who can command the security are apt to turn up their noses at a job paying less than $3 per day. The $200 bonus, if collected in a lump, would prove a nice little nest-egg to many of these young men, but I am sorry to have to say that such is seldom the case. There is sure to be a Shylock in every bank who makes a business of advancing on this bonus at exorbitant rates of interest."—New York Evening Sun.

A Business Like Young Woman.

There is a young girl down in Mississippi who is destined to make her mark. Some one gave her 5 cents one day. She went at once to a dry goods store, bought a yard of calico, made it into a sun bonnet, and sold the bonnet for 40 cents. She invested the 40 cents in more calico, made more bonnets, sold them, reinvested, made other garments, and pretty soon had $10. With this $10 she bought a lot of potatoes, planted them, paid for their cultivation, harvesting and marketing, and came out with a clear profit of $40. Let the young men of the south look out for this girl. That $40 is still growing. It may run into the millions some of these days.—Columbus Dispatch.

A SUGARMAN'S FORTUNE.

A representative of the *Courier*, having discovered that one-twentieth of ticket numbered 73,946 which drew the second capital prize of $100,000 in the last drawing of The Louisiana State Lottery Company held Oct. 9, was owned by a man living on North Margin street, thought it would be interesting both to himself and the public to look the matter up and find if there was a man upon that street by the name of Charles Joseph Harkins, who was reported to be the lucky individual, and if so, if he had actually received the $5,000 of which he was said to have so suddenly become the owner. Much more difficulty was experienced in discovering the whereabouts of the obscure and not at all aristocratic street than in finding Mr. Harkins' residence upon it, and even the man himself. At the top of a three-story brick house Mr. Harkins occupies, with his wife and family, a neatly kept tenement, which betrays that its inhabitants are as comfortable as their circumstances will allow them to be; but that poverty has for many years cast its shadow over the little household is also evident. To no one could a windfall of $5,000 have been more welcome. Mr. Harkins received the money through the express company a few days ago and has it now safely deposited to his credit. What he will do with so much money he has not yet decided. His present occupation is that of a laborer in a sugar house on Commercial street, where he has worked for some time, or since he was employed in similar work in East Boston. Although he has bought tickets in the lottery but once or twice before, he is now thoroughly convinced of the wisdom of buying a ticket at least now and then.—*Boston (Mass.) Courier*, Nov. 4.

WELL-KEPT ROAD-SIDES.

Missionary Work That Is Sure to Pay in More Ways Than One.

A law of New York passed last winter, amending that of '78, imposes it as a duty upon occupants of land in the State to cut contiguous roadside brush and weeds, or pay for the work, to be done under official oversight. It is a wise provision, and ought to be cheerfully complied with. Out-of-place and noxious vegetation, scattering seeds to the detriment of the whole country round about, is especially injurious to the owner of the adjacent property. In their place he may grow trees valuable for fruit or timber; by grading and seeding the ground, it may in most cases be made to yield grass, which can be cut with a mowing machine and taken for his use without interference by the authorities; when the land ceases to be used as a highway it reverts to him. The grass of the highways might, with a little labor, be greatly improved, but as it is, it would be worth in most districts twice the cost of cutting and saving if taken in season. Bad roads and neglected roadsides lessen the value of all the land in the neighborhood. People looking for homes make the best headway they can out of a country where tumbledown fences, brush, briars, weeds, withered grass certify to the want of thrift, lack of taste, intelligence and public spirit of the resident population. Good roads bordered with green grass and well-selected trees, carefully cared for, and "vine-covered cottages" would make journeying in the country delightful and profitable. City people needing a vacation would find such journeys cheaper, more healthful, edifying and satisfactory than a sojourn at regular watering-places and other fashionable resorts. Whoever makes the country attractive, whoever and whatever attracts and attaches people to rural life does valuable service. As soon as country people, appreciating their opportunities, bestow reasonable consideration and care on their thoroughfares, their dwellings and surroundings, and on their religious, social, educational, commercial and industrial institutions, the country will be made so attractive that those who live there will want to stay, and those who left will want to get back. People peculiarly susceptible to the dollar argument should be reminded that the dollars they expend on private and public improvements yield a high rate of interest by attracting the class of purchasers who have tastes to gratify and money to expend. Since human support—food and clothing—comes from the soil, agriculture should be the chief occupation of men; they need little that it can not supply. But pride, vanity, appetite, passion, create demands for things costly, superfluous and damaging; to supply these the country is drained of its population; commercial and manufacturing centers, with their abounding abominations, grow in wealth and population while many rural districts decline. Making the country what it should be, and may be, we do missionary work; we show people the right way to live—provided always we live right ourselves. Rural life, as our Creator meant it to be, is attractive and satisfying; as we too often make it, it is repulsive.—*Hugh T. Brooks in N. Y. Tribune.*

DANGEROUS READING.

The Unwholesome State of Mind of the Voracious Novel-Reader.

The mischief of voracious novel-reading is really much more like the mischief of dram-drinking than appears at first sight. It tends to make all other literary nourishment intolerable, just as dram-drinking tends to make all true food intolerable, and to supersede food by drink. The voracious novel-reader of to-day, as we have said, rejects Scott, because Scott's novels contain so much good food that it is not mere story-telling. The genuine novel-reader detests what he calls tame stories, stories in which the interest is not exaggerated and piled up ten times as high as the interests of ordinary life. He wants always to be feeling a thrill of excitement running through his nerves always, to be living in imagination through the concentrated essence of the perils of a hundred adventurous lives, instead of toiling calmly through the ordinary hopes and fears of one. No state of mind can be more unwholesome, because none is more calculated to divert the energies from the sort of quiet tasks to which they should be habitually applied, and to keep them stretched on the tenter-hooks of expectation, waiting for a sort of strain which is never likely to occur, and if it did occur, would certainly not find a man's energies any the better prepared for it for having been worn out previously with a long series of imaginary excitements. The habit of dram-drinking, it is said, leads to fatty degeneration of the heart, i. e., excessive fattening round the heart, and weak action of the heart in consequence. So, too, the habit of exciting novel-reading leads to fatty degeneration of the literary mind, i. e., to an unhealthy and spasmodic action of the imagination, and a general weakening of the power of entering thoroughly into the solid interests of real life. So far as we know, the only effective cure for this habit of literary dram-drinking—a cure not always forthcoming—is a moral shock of some kind which exposes the hollowness of all these unreal interests, and makes them appear as artificial and melodramatic as they actually are. That, however, is a cure which is an extremely painful one, almost cruel in its disillusionizing power.—*London Spectator.*

Care of the Nails.

The finger nails of Americans are likely to be dry and to break easily. Vaseline rubbed on the nails after washing the hands will do a world of good to dry nails. Manicures first bathe the hand a long time in hot water, then with scissors and knives clean and cut the nails, remove the superfluous skin about the onyx, then polish the nails with buckskin and fine powder, washing the hand again in hot water with soap. After drying, the nails are polished with a fine brush and are finally rubbed with a rosy unguent to give them a shell pink.—Good Housekeeping.

LOVE'S HALLOWED GROUND.

Deep in a vale, where rocks on every side
Shut out the winds and scarcely let the sun
Between them dart his rays down one by one,
Where all was still and cool in summertide,
And softly, with her whispering waves that sighed,
A little river, that had scarce begun
Her silver course, made bold to fleet and run
Down leafy falls to woodlands dense and wide;
There stood a tiny plain, just large enow
To give small mountain folk right room to dance,
With oaks and lines and maples ringed around;
Hither I came, and viewed its turf askance,
Its solitude with beauty seemed aglow—
My love had walked there and 'twas holy ground!

—Gosse, from the Swedish.

Dinner Tables, Old and New.

The old English dinner table was a massive thing and was heavily loaded for dinner. There were huge joints, enormous game pies and the carcasses of poultry. It was considered the correct thing for the hostess to carve and to press the guests to gluttony and the host to pass the bottle several times too often. With such display of food there was little room for floral decorations. In the course of time the vegetables were banished from the table and handed by the attendants. Then the made dishes were dubbed entrees and were cleared off the table and brought in by the attendants piping hot.

Finally the meats were taken off, and at last the guests were permitted to eat or not to eat, without any influence on the part of the host or hostess, while at the same time the praising of the viands, which used to be the practice, no longer became proper. The appearance at the table, as well as the conduct at the table, has changed. The table is not so massive and the floral decorations are frequently of the most elaborate and costly description. People who cannot spend much money on floral decorations, yet devote time and taste to them, using such as may be picked wild, ferns, berries, etc., besides such cultivated ones as may be obtained.—Good Housekeeping.

Inventions in Dental Surgery.

The dentists in this city are divided into two parties, one for maintaining inviolate the present code of ethics, and the other for reforming it. The conservative party is comprised chiefly of men of the old school, men to whom professional courtesy is of higher importance than silver certificates. Most of the reformers are young men who prefer dollars to doughnuts. The two elements are at war on the subject of the patentability of modern inventions in dental surgery. The conservatives contend that under the code all inventions are made for the good of humanity; that patents restrict the use of inventions, and, consequently, humanity suffers. The reformers believe that the laborer is worthy of his hire; that if a dentist spends ten years in perfecting an invention he is entitled to all he can make out of it. The name of Bohnwiel occurs often in the discussions on the subject. He is a reformer of the reformers. The little machine that stands beside the chair of every dentist in Christendom is mainly the creation of his inventive genius, and he has reaped a liberal reward of $60,000 from the patent. Yet no one can say that he has not benefited humanity.—New York Tribune.

Stage Lights and Shadows.

The audience in a theater think as little of the man whose work enables them to witness the stage performance as railway passengers do of the engineer who conducts them safely to their journey's end. They see the show, and if they enjoy it they never trouble themselves to inquire what causes produce such brilliant effects. But for every light in the auditorium, and for every shade of illumination behind the scenes, they are indebted to the humble gasman, who stands by his post in the wings next the footlights. Here, by means of a number of little hand wheels, he regulates every gas jet in the theater. Before him is a plot of the play, and he listens for his cues as anxiously as any actor in the company. A false move on his part, such as the turning of a wheel at the wrong time, may ruin the whole scene—a moonlight effect may be spoiled by a flood of dazzling light, or total darkness may obscure the stage.—New York Commercial Advertiser.

A Hint to Smokers.

It is remarkable that people smoke so much tobacco, in its various forms, that is impregnated with deadly nicotine, when by a simple method, which would not detract one whit from its good quality, but would remove all that is objectionable, the tobacco could be made free of this poison. Merely soak the tobacco a day in a shallow trough, and then lay it in the sun, if feasible; if not, dry by the most convenient means, and the weed is robbed of all odoriferous properties and of nicotine. It is then so sweet the fumes would not offend the most sensitive lady, because it has no fumes. Besides, the vessel in which it is burned does not become "strong"—a valuable thing for a man who prefers a meerschaum pipe to cigars.—Sergt. McNamee in Globe-Democrat.

Cremation Furnaces in Paris.

Four large cremation furnaces have been declared open at the great Parisian cemetery of Pere-la-Chaise. The question is agitated whether pauper bodies should be cremated by the Paris municipality, but there is such a strong feeling against it among the poor that the idea will probably have to be abandoned. It is usually the wealthy who prefer cremation.—New York Sun.

She Was a Smart Girl.

Young Lady—Have you a position vacant in your store for a——

Old Merchant (with hardening features)—For a——

Young Lady (modestly)—For a sales woman, sir?

Old Merchant (warmly)—I have, miss. You shall have one of the best in the store.—Chicago Tribune.

Taxing Women Who Marry.

In Tashkend, says a traveler, the Chinese have imposed a tax on all women who marry. All merchants who visit Kashbar are obliged to take a wife. As soon as they leave the woman obtains another husband, and thus the tax affords a considerable revenue to the government.—Chicago Herald.

Paris' Cafe Trust.

Twenty of the leading restaurants and cafes in Paris are being united into a company. Its capital will be 7,500,000 francs in 500 franc shares, 13,500 of which are to be offered to the public at par.

A Topeka girl broke off her engagement with a young man because he held an ear of green corn in his hands and plucked it with his teeth. Oh, dear!

WHY

Do Americans prefer HAMBURG FIGS?
Because they cure constipation.
Why do Englishmen prefer Hamburg Figs?
Because they need them while traveling to keep the system in perfect health.
Why do Germans prefer Hamburg Figs?
Because they cure biliousness.
Why do Frenchmen prefer Hamburg Figs?
Because they cure piles.
Why do Spaniards prefer Hamburg Figs?
Because they cure liver complaints.
Why do everybody prefer Hamburg Figs?
Because they are a crystallized fruit cathartic, mild and effective in action.
Hamburg Figs are sold everywhere, 25 cents a box. Dose, one Fig.

In any irritable condition of the sexual organs, Dujardin's Life Essence is the only remedy. It is quick, safe sure. Hundreds of testimonials prove its wonderful power in sexual debility. Price, $1.50 a bottle. All druggists.

The "Towers of Silence."

Sir Jamsadji Jijibhai, a Persian banker, has sent a model of a "Tower of Silence" to the Anthropological museum at Berlin. The Parsees, or Fire Worshipers, hold it to be a sin to pollute air, water or earth with dead bodies. They, therefore, build high towers on hills, 300 feet in circumference. At the top is a platform sloping toward the center, where a cistern, 150 feet in circumference, is placed. This platform is divided into three sections, one each for men, women and children. Corpses placed here are at once pounced on by vultures, which soon leave only clean bones. These are swept into the cistern, and the water, after the bones are dissolved, is carried through a series of canals and disinfected. The Parsees have never yet been surpassed as a race of clean, pure, manly, energetic people. They reside now mostly in Bombay, but are few in numbers.—Globe-Democrat.

Crafty London Shopkeepers.

The other evening a native born Londoner, during a discussion of the mysterious Whitechapel murders, fell to talking of Petticoat lane. "It is," said he, "merely another name for one side of Middlesex street. The street forms the boundary line of old London town, and while the side next the city is known by its proper name, the opposide side is called, from the large number of second hand clothing stores, Petticoat lane. Very crafty are those dealers down the lane. A man may stroll past their shops and, seeing a handkerchief hanging outside that he fancies, step in and purchase it, then if he will turn and walk back on reaching the end of the street he will find the identical handkerchief in its old position. The thrifty seller has in his employ one or more small boys whose sole duty is to follow purchasers and 'prig' from them their newly acquired property."—Chicago Mail.

A New Calculating Machine.

A resident of Chicago, Mr. D. C. Felt, has invented a machine which will add, subtract, multiply or divide without error. It is said to work perfectly, and will secure a saving of time in commercial operations, quite like a type writer in the hands of letter writers. Babbage's calculating machine, which for generations was the wonder of philosophers, would, if invented now, be only a nine days' talk. Mr. Felt's invention will be of vastly more use than Babbage's, but will draw less oratorical attention. Meanwhile Edison turns from machinery to sanitary discoveries, and proposes by science to cordon yellow fever. Science is emphatically king.—Globe-Democrat.

Fair Client—I wish the utmost secrecy to attend my divorce. Lawyer—Oh, I'll fix that. I'll have the official publication made on the day that the newspapers print the election returns.

A VALUABLE MEDICAL TREATISE.

The edition for 1889 of the sterling Medical Annual, known as Hostetter's Almanac, is now ready, and may be obtained, free of cost, of druggists and general dealers in all parts of the United States, Mexico, and indeed in every civilized portion of the Western Hemisphere. This Almanac has been issued regularly at the commencement of every year for over one fourth of a century. It combines, with the soundest practical advice for the preservation and restoration of health, a large amount of interesting and amusing light reading, and the calendar, astronomical calculations, chronological items, &c., are prepared with great care, and will be found entirely accurate. The issue of Hostetter's Almanac for 1889 will probably be the largest edition of a medical work ever published in any country. The proprietors, Messrs. Hostetter & Co., Pittsburgh, Pa., on receipt of a two cent stamp, will forward a copy by mail to any person who cannot procure one in his neighborhood.

Up in Arithmetic—Teacher (of arithmetic class)—Tommy Twaddle may tell us what a league is. Tommy (promptly)—A league is eight base-ball teams.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine DR. C. MCLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

Things do not always follow as a matter of course. A man who makes puns is not a punsit; neither is one who plays in a band a bandit.

STAMPING AND EMBROIDERY.

"Yes, Lizzie, I like to do fancy work, but I haven't felt like trying that pattern—or anything else—for a week. These awful 'dragging down' pains are just killing me"? "I know how you feel, and I can tell you where to look for relief. Dr. Pierce's Favorite Prescription is a certain cure for all those peculiar weaknesses and distressing ailments. Why! it even cured me of prolapsus, and many of my lady friends have been cured of various grave maladies peculiar to our sex by this wonderful medicine." It is the only medicine sold by druggists, under a positive guarantee from the manufacturers, that it will give satisfaction in every case, or money refunded. Read guarantee on bottle wrapper.

No contributions to the "Is Marriage a Failure" discussion have yet arrived from Salt Lake City.

BRONCHITIS CURED.

After spending Ten Winters South, was Cured by Scott's Emulsion.

116 Centre St., New York, June 25th, 1888.

The Winter after the great fire in Chicago I contracted Bronchial affections, and since then have been obliged to spend nearly every Winter South. Last November was advised to try Scott's Emulsion of Cod Liver Oil with Hypophosphites and to my surprise was relieved at once, and by continuing its use three months was entirely cured, gained flesh and strength and was able to stand even the Blizzard and attend to business every day. C. T. CHURCHILL.

Sold by all Druggists.

S. F. N. U. (First Series) No. 338.

OUR LITTLE WORRIES AND ILLS

It is the little things of life, the worries of to-day and to-morrow, that make the crow's feet around our eyes. So the little pains of an hour or a minute break down the constitution. Look after the little ills. BEANDRETH'S PILLS cure dyspepsia, or indigestion, headache, pain in the shoulders, coughs, tightness of the chest, dizziness, sour stomach, bad taste in the mouth, bilious attacks, palpitation of the heart, inflammation of the lungs. Pain in the region of the kidneys, and a hundred other painful symptoms are the offspring of dyspepsia. One or two Pills every night is sufficent.

Bright Boy (to visiting pastor)—Now try it on me. Ma says you can put any one to sleep in five minutes.

VERY SENSIBLE "JAPS."

In Japan the old-school physicians are permitted to wear only wooden swords. This is a gently sarcastic way of expressing the opinion that they kill enough people without using weapons. But the druggist who introduced Dr. Pierce's Golden Medical Discovery into the Empire, carries a fine steel blade. It was found that all who tried this wonderful remedy for coughs, colds, consumptive tendencies, blood skin and liver troubles, were, without exception greatly benefitted. The Mikado himself is said to have "toned up" his system by its use, and the importer was therefore permitted the exceptional honor of wearing the sword of the nobility.

Some men go West and get covered with honor, while others get covered with a pistol.

BRONCHITIS.—Sudden changes of the weather cause Bronchial Troubles. "*Brown's Bronchial Troches*" will give relief. *Sold only in boxes.* Price, 25 cents.

FOR CHRISTMAS.

An opportunity not often placed at the command of people living in the interior districts is offered, for the coming Holidays, by Col. A. Andrews, proprietor of the great Diamond Palace, of San Francisco. In the line of Diamonds, Watches, and all kinds of Jewelry he has the largest stock in the State, and intending purchasers can save 20 to 25 per cent by placing their orders with him. Parties in the interior will do well to send their orders direct to Colonel Andrews, stating the article wanted and the price, and leave the selection to his good taste, judgment and honor, and they may be assured of being justly dealt with. If the goods do not suit, they can be exchanged, or the money refunded. Goods forwarded C. O. D. The Diamond Palace is situated at 221 Montgomery street, San Francisco, under the Russ House.

Customer—I see you advertise something new in coffee. What is it? Grocer—Coffee.

DO NOT THINK FOR A MOMENT

That catarrh will in time wear out. The theory is false. Men try to bear it because it would be unpleasant if true, but it is not as all know. Do not let an acute attack of cold in the head remain unsubdued. It is liable to develope into catarrh. You can rid yourself of the cold and avoid all chance of catarrh by using Dr. Sage's Catarrh Remedy. If already afflicted rid yourself of this troublesome disease speedily by the same means. At all druggists

LOOK THIS WAY!

And we will show you something worth while talking about in Dried Fruit for Winter use: Choicest Peeled and Evaporated Peaches—perfect beauties, worth sending three thousand miles to get—at 20c; other good Peeled at 15c and 17c, and common Peeled 5c to 10c, that cook beautifully, but are not so pretty to look at. Then, in Unpeeled Peaches we guarantee to suit you at 5c, at 6c, at 7c, at 8c, at 10c—at almost any price, but always 2c to 3c below usual wholesale market. Apricots, Pears, Nectarines, we start at say 6c for good and go to 8c or 10c for choice, with one mark of 'Cots at 15c that would make you feel glad all day to try them. Prunes—well, it is too bad, and the producers all agree with us, but how are we to help it?—in round lots we offer right good at 5c, larger at 6c, fine at 7c, and best in market at 8c and 9c. Order what you want to try them. Pitted Plums only 8c this year, and those with stones in $8 per 100 lbs, and 3½ to 4c for less quantity. You'd think no one would send us any Fruit to sell, but it pours in by carloads. We sell largely East, but have plenty left for home demand. It will be higher after New Years. We never miss it on Dried Fruit, you know. Order soon of Smith's Cash Store, No. 418 Front Street, San Francisco, Cal.

ARM & HAMMER BRAND

To Housekeepers and Farmers.—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons, which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, purposes & being much healthier, because it does not contain any injurious substances, such as alum, terra alba etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK

CHURCH & CO'S SODA

ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound packages *full 12 ounces* net, Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

SODA OR SALERATUS

THE ONLY DYES

Brilliant Durable Economical

Are Diamond Dyes. They excel all others in Strength, Purity and Fastness. None others are just as good. Beware of imitations—they are made of cheap and inferior materials and give poor, weak, crocky colors.

36 colors; 10 cents each.

Send postal for Dye Book, Sample Card, directions for coloring Photos., making the finest Ink or Bluing (10 cts. a quart), etc. Sold by Druggists or by WELLS, RICHARDSON & CO., Burlington, Vt.

USEFUL AND SUGGESTIVE.

—An excellent furniture polish is of equal parts of shellac varnish, linseed oil and spirits of wine.

—For a scald or burn apply immediately pulverized charcoal and oil. Lamp oil will do, but linseed is better.

—A cloth saturated in kerosene and dipped into whiting, for cleaning tinware, is much better than any thing else used.

—Plush goods and all articles dyed with aniline colors, faded from exposure to light, will look as bright as ever after being sponged with chloroform.

—The *Scientific American* says that hot water applied every hour or two to the hands or other part affected by poison ivy, whenever itching returns, will effect a cure in a couple of days.

—Glue that is delicate and nice for mounting ferns and sea-weeds is made of five parts of gum-arabic, three parts of white sugar, two parts of starch; add a very little water; boil until thick and white.

—Boil one ounce of flax-seed in a pint of water; strain it and put in an ounce of rock candy, some honey and the juice of three lemons; boil again. Result—a nice old-fashioned cough medicine. Drink it hot as you can bear it.

—A patent nutmeg grater and an ounce of nutmeg will keep a restless child busy and happy half a day turning the tiny crank, while the grated spice, carefully preserved from the air in a tin box, is a real help when one is hurried with cooking.

Lemon Cheese—One lb. of loaf sugar; one-fourth lb. of butter; juice of three lemons and grated rind of two; six eggs, leaving out the whites of two. Put all in a saucepan, stir gently over a slow fire until the mixture becomes thick and looks like honey.

—The nicest way to wash bedquilts and comfortables, is to place them on the grass during the rainy days of fall and spring, turning them occasionally. When clean and the day bright, hang them on the line to dry. If a windy day, all the better.—*Housewife.*

—Oyster Macaroni.—Boil macaroni in a cloth to keep it straight; put a layer in a baking dish; season with salt, pepper and butter; then put in a layer of oysters, and so on until the dish is full. Mix grated bread with a beaten egg. Spread over the top and bake.

—Barberries make an exceedingly pretty garnish, and may be very easily preserved for this use, as they need only to be placed in a jar with brine to keep indefinitely. Green grapes, picked while the skins and pulp are still tender, may be pickled in the same way, and have a piquant flavor that suggests olives.

—To make furniture paste to cement or fill in blemishes in furniture, especially mahogany, the following directions are given: Moisten four ounces of scraped beeswax thoroughly with turpentine, then to a quarter of an ounce of powdered rosin add enough Indian red to bring it to a deep mahogany color. Stir all thoroughly together.

—Red coloring, which is often required for jellies, ice cream, syrups and icings for cakes, is made by boiling fifteen grains of powdered cochineal in half a pint of water, to which a piece of alum the size of a hazel nut and a drachm and a half of cream of tartar are added. Boil all together slowly for half an hour, then strain and bottle.

—Cider should stand in large, open casks long enough to ferment and cleanse itself of pumace particles and other impurities. Further fermentation may be prevented by scalding the cider after it has been slightly fermented and settled. The scum made by scalding should also be skimmed off before the liquid is cooled and barreled.

—The terrible pain caused by being severely burned may be almost instantly relieved by applying a mixture of strong, fresh, clean lime water mixed with as much linseed oil as it will cut. Before applying, wrap the burn in cotton wadding saturated with the lotion. Wet as often as it appears dry, without removing cotton from burn for nine days when a skin will probably have formed.

—Cigar boxes may be utilized for many ornamental purposes. As receptacles for trinkets they may be covered with cotton batting overlapped with satin and silk, the edges being sewn to strips of cardboard, to be attached with glue to the sides and base. The exterior may be covered with cardboard, with medallion openings disclosing painted designs. The exterior borders may be covered with silk cord, with ribbons at the upper angles.

—To Cleanse Oil Cloth.—Shred one-half ounce of good beeswax into a saucer, cover it entirely with turpentine, and place it in the oven until melted. After washing the oil cloth thoroughly with a flannel, rub the whole surface lightly with the flannel dipped in the wax and turpentine, then rub with a dry cloth. Beside the polish produced the surface is lightly coated with a wax, which is washed off together with any dust or dirt it may have contracted, while the oil cloth is preserved.

—Ladies, when they purchase kid gloves, should examine separately the fingers of each glove and take none that have broken stitches. Stretch the seams carefully between the thumb and forefinger; if the kid comes away from the thread, leaving a white seam, that is not the pair for you. Elastic kid generally wears well. Stiff and unyielding skins are worthless. They neither fit nor wear well. Narrow gloves never fit or wear well, and disfigure the hand instead of beautifying it. Short-fingered gloves deform the hand.

INSECT UNDERTAKERS.

What a Scientist Learned While Watching the Doings of Burying Beetles.

Nearly every one is familiar with the burying beetle, and many have, perhaps, watched its operations. Noticing that dead moles and other small animals laid on the loose ground soon disappeared, Prof. Gleditsch concluded to investigate the cause. Accordingly, he placed a mole in the garden, and on the morning of the third day found it buried, some three inches below the surface. Though wondering why this service was performed for the dead mole, yet, as he saw only four beetles under the carcass, he re-buried it and in six days found it overrun with maggots. It was not until then that the thought struck him that these maggots were the offspring of the beetles he had seen, and that they performed the burial rites in order to provide a place to deposit their eggs, where the newly-hatched young might have food for their nourishment. Continuing his observations, Mr. Gleditsch placed four of these beetles under a glass case, with two dead frogs. One pair buried the first frog in twelve hours, and on the third day the second one was similarly disposed of. The professor then gave them a dead linnet, and a pair of the beetles set to work to bury it. They pushed out the dirt from beneath the body; then the male drove the female away, and worked alone for about five hours, turning the linnet around in a more convenient position, and occasionally mounting the body to tread it down. After resting for an hour it proceeded, as before, alternately excavating and pulling the bird from below, and then treading it down from above. It was buried by the end of the third day. In fifty days the four beetles had buried four frogs, three small birds, two fishes, one mole, two grasshoppers, the entrails of a fish, and two morsels of the lungs of an ox. —*Chicago Inter-Ocean.*

Storing Apples for Long Keeping.

There is a difference in the keeping qualities of apples in different years that nobody has been fully able to account for. Occasionally a year occurs, to all outward appearances not exceptionably different from others, when windfalls will keep as well as carefully picked apples in former ones. Such a difference can not be laid to the handling of the fruit, but must be owing to atmospheric influences. Apples will endure without injury a much lower temperature than will potatoes, and the cooler they are kept without freezing the better. Dry, cool cellars are generally preferred by farmers as a store place for their barreled apples, but of late years some growers claim that this fruit keeps better in moist than in dry places, always providing said place is cool. When kept in cellars, good ventilation is necessary in all cases. When barreled in an orchard and not shipped away at once, the apples are better to be put up in tiers under the trees and protected from the rain and sun by boards than to be put in buildings. Some persons leave the barrels all on the ground in the shade and uncovered, claiming that they keep cooler on the ground than when piled up. Apples raised on rich alluvial lands will prove poor keepers. For the best keeping the orchards should be on high or hilly lands and not too rich.—*N. Y. World.*

The Farmer as a Man.

The farmer in the struggle for existence should not forget that he is a man created in the image of his Maker, and possessed of great capacities and wonderful capabilities. How many men we see devoting their whole energies striving to see how much riches and worldly possessions they can acquire, seemingly scarcely to think of trying to see how much of a man they may become. How seldom we estimate the value of any life experience by the effect it has had in making us more kindly, more considerate of others, more self-denying and more firmly resolved to do right. The building up of a noble, pure, grand character is the grandest work a man can engage in, and one that is often better promoted by what are generally regarded as the reverses in life than by successes. What are generally regarded as the successes in life are often but hindrances to the man's becoming a true man, making him more selfish, more narrow-minded and dwarfing his manhood. Whatever a man's worldly success, or whatever the lack of it, he yet can be a man in the true sense of the word, and as such be the full equal of any other man.—*St. Paul Pioneer-Press.*

The Marriage Was Postponed.

"Yes, dear, I love you; but please don't be so impatient. It would be ridiculous to set our wedding day so soon."

Engaged Youth—But why?

"You must remember that a marriage is a great and solemn event in a woman's life, and should be celebrated by a grand wedding, with every thing perfectly lovely and six beautiful bridesmaids."

"All right. You can have a dozen if you wish."

"What a darling you are! Well, that's why I want to wait. Bridesmaids are out of style now, but Mrs. Society says the fashion will be revived in three or four years."—*Philadelphia Record.*

—"Still lying in his grave" is an Eastern paper's reply to the request: "Please inform an archæologist where the body of Ananias now is." A striking instance of the ruling passion strong in death.—*Chicago Herald.*

IMPERFECT STABLES.

How They Affect Live-Stock and the Farmer's Pocket-Book.

On how many farms, should stables be visited by a committee of inspection, would the stables be found so perfect in their arrangements as to call for no criticism? I imagine those which would be graded perfect are few. Yet the stable is a very important part of the farm economy for it is there that a large part of the farm manufacturing is carried on. The hay, fodder and grain are made into butter and beef, and the fertilizers are prepared that are to restore the waste of the farm and enable us to grow profitable crops in the future. The essentials of a good stable are that it should be warm so that in winter no cold drafts blow on the stock confined without exercise, and at the same time it should be well lighted and ventilated; that the arrangements for getting the food to the stock be such as to economize time and labor, and to enable us to clean the mangers readily and quickly; that the stable floor be made tight so as to save all the manure, liquid and solid, and so arranged that the stock is not liable to be soiled, and the manure can be easily removed, and that there be good roomy box-stalls to be used for cows at farrowing time, for mares either heavy with foal or with young colts and for wintering calves and colts. Tried by these standards few stables will be found that fill the specifications. It may not be easy to remodel an old barn so as to get the perfect stables, but in most of them a little planning and a moderate outlay of time and money will result in a great improvement.

Perhaps an enumeration of some things which I have seen, and some suggestions, may be helpful to our readers: First, I suggest that on the first rainy day when you are at leisure you go to your barn and study for a few hours the details of your stable. I will tell you what many of you will find. Cracks between weather boards that will let the cold winds in and the fine snow sift through when there is a blizzard so that your stock will stand and shiver. Stock will be far more comfortable out of doors where they can exercise and seek the lee of a strawstack, or the shelter of a grove, than when confined in a stall in such a stable. To keep animals under such circumstances is an expensive cruelty, for at least one-fourth of the food eaten is consumed in maintaining heat, when it might as well be used in making beef or milk. The thing for those to do who find the stable in this condition is to buy paper and lumber and have the stable double-boarded before winter comes. After you have tried it one winter if you do not conclude this to be good advice, send the bill to me and I will pay it, provided you will agree that if you do and that the advice was good, you will send me a ten-dollar bill as a fee for professional services. Some of you will find a worse state of affairs than this, for in addition to the cracks in the sides of your stable there is no underpinning, and the wind sweeps under the stable and comes up through cracks an inch wide in the stalls. You ought to go around behind the barn and kick yourself on making this discovery, and then if you do not remedy it I would like to tie you in one of those stalls on the birthnight of next winter when the mercury dropped down near zero and the wind was cut on a tear. I think before morning your repentance would be genuine and your resolutions of amendment sincere.

But these cracks are costing you more than merely the extra feed to keep your stock warm. Just listen a moment while I read from a table giving the values of manures, and there is no question of the accuracy of the statement: "The fresh solid excrement of a horse is worth $1.36 and the fresh urine is worth $8.62 per ton. The solid excrement of the cow is worth 86 cents and the urine is worth $3.14 per ton." These valuations are based on the values of nitrogen, phosphoric acid and the potash in them at the same price we are charged for them as commercial fertilizers. The urine then being so valuable, is not a leak in the stable floor worse than a leak in the roof? How many stables have floors tight enough to save the liquid? I was in the stable of a neighbor last spring and saw one of his horses standing in a pool of urine where the floor had been worn hollow and seeing that I noticed it he said apologetically: "I bored some holes in the floor to keep the stall dry but they have got stopped." I said to him: "Don't you know that one pound of urine is worth six pounds of the solid manure?" He answered indifferently as though it was a matter in which he had no interest: "Yes; I believe it is," and the holes I think are still in the floor. Yet this man is in nearly every respect an unusually good farmer. Yet such is the force of habit that while carefully saving his solid manure, although he had a large stack of clover straw from which he had threshed seed, which on a tight floor would have absorbed all this liquid, he bored holes in his floor to get rid of it.—*Waldo F. Brown, in Ohio Farmer.*

—Italian immigrants to New York live on nine cents a day. They make a soup with a bit of pork and cast-off shreds of cabbage and serve it with black bread. Some Italian laborers who are receiving seventy-five cents a day are growing rich. They can hardly be welcomed competitors in the labor market.

—The hog is omnivorous and is much benefited by the right sort of vegetable food.

CURRENT ITEMS.

—The latest cure for rheumatism, according to a Georgia doctor, is to purchase a Mexican hairless dog and make the animal sleep so that the feet of the sufferer can touch the dog's body.

—For several days the church clock at Harpenden, England, refused to work. On an inspection being made it was found that a swarm of bees had taken up their abode in the machinery.

—And old lady aged one hundred and sixteen years recently died near Campos, Rio de Janerio, leaving 9 children, 109 grandchildren, 300 great-grandchildren, and 100 great-great-grandchildren, making a total of 518.

—If you can contrive surreptitiously to place pieces of India rubber beneath the feet of your neighbor's piano on the upper floor you will spoil half the performer's enjoyment, but add years to your own.—*Boston Commonwealth.*

—The champion absentminded man of East Union, Me., is he who bedded his horse with shorts instead of sawdust the other night. He found out his mistake when his horse had eaten up his bedding and it became necessary for his owner to rise in the middle of the night and walk him up and down the road for exercise.

—A horse met his death in an odd manner in Choctaw County, Ala. He stepped on the end of a short pole that was in the road, when the other end raised and stuck in his abdomen. Becoming frightened, he then made a lunge forward, and in doing so drove the stick "nearly through him," causing death in a few minutes.

—A Mormon from Idaho, who gave the name of Hyde, as he always does under certain circumstances, spent $18,000 in New York not long ago on a spree. He was arrested for drunkenness, but one of his wives came on after him, took him in charge, and promised the officers to take him home and make a Dr. Jekyll out of him.

—In one of our street cars the other day a rural rooster entered and seated himself without attempting to pay his fare, says the New Orleans *Picayune.* The driver said: "Captain, put your nickel in the box, please." "Oh, no," said the rooster with a knowing smile, "it didn't play no music when the man ahead of me put in his nickel. The thing's out of order and don't work. I've traveled, I have. No music, no nickel."

—The Birmingham *Age* tells of a Redding man who has had his confidence in bloodhounds cruelly betrayed. A negro stole a pair of trousers from him, and he let loose three bloodhounds and started in pursuit. The negro backtracked, the dogs lost his trail and took after the pursuing white man, whom they finally treed, and kept him in that predicament from five o'clock in the afternoon till ten o'clock the following day.

—Quite a romantic wedding is reported to have taken place five miles west of Denison, Tex., the happy couple, minister and all, standing knee-deep in the Red river while the wedding ceremony was performed. The intention was to cross the stream and have the knot tied on the opposite bank, but when the party had waded out a short distance it was learned that the "old folks" were in pursuit, so the lovers were made one forthwith.

—The Portland *Oregonian* tells of a peculiar sight witnessed the other day by passengers on the ferry from Vancouver. A seal was in pursuit of a salmon. The fish darted hither and thither, and frequently leaped out of the water. The passengers became very much excited in watching the race. Finally the fish darted up to the boat and jumped on board. A member of the boat's crew sold it to a farmer, to the great indignation of the passengers, who wanted it taken to a safe distance and restored to the water.

—There is one old-time habit, says an exchange, that used to be widely prevalent in the United States, especially in the West and South—the tobacco chewing habit—that has certainly declined in the present generation. The manufacturers of chewing tobacco say that the trade in it has not grown with the growth of our population, but that in many States it is less than half as large as it used to be before the war. In the New England States it has become of very slight account. The States in which it now has the greatest hold are Kentucky, Missouri, Tennessee, and Arkansas. It is an unwholesome habit, offensive to decent people, and ought to disappear.

—Orange Sirup.—Squeeze the juice of the orange through a sieve and to every pint add a pound and a half of powdered sugar with a little of the grated orange peel and the juice of one lemon. Boil the sirup for fifteen minutes and skim as long as scum rises. If it does not look clear when taken off, strain it. Next bottle and seal up tight, and it will keep for a long time. Two tablespoonfuls of the sirup mixed with a quarter of a pound of creamed butter makes a nice sauce for a pudding, or a pleasant flavor for custards and ices. Mixed with cold water and ice it makes a delicious drink and can be safely given to invalids.

—A good breakfast dish may be made with the remains of any cold fish. Free them from bones and flake into quite small pieces, add pepper, salt, a little bread crumb or a cold potato and two or three well-beaten eggs; form into balls or small oval cakes, and fry a light brown in boiling butter; drain them by laying on paper. Cold tongue grated and laid pretty thickly on hot buttered toast is also a very good breakfast dish.

THE SOUTHERN TORTOISE.

Prof. Shaler Describes Some of the Habits of This Queer Reptile.

Here and there, but rarely, perhaps, in one amid a hundred of these mounds, we find the place where the reptile entered the ground. This opening is at once seen to be quite separate in character from the mounds which first attract the eye. It consists of a clearly-defined tunnel, the sides commonly somewhat smooth and compacted by the energy with which the body of the creature has been driven through it. The passage inclines steeply downward, descending at the outset at an angle of from twenty to thirty degrees, then turning at the depth of two or three feet to a horizontal position. On the surface, a little beyond this entrance, is a heap of *debris*, which consists of the sand taken from the passage. A few feet in from the opening the passage appears to be closed by loose material which was not ejected from the mouth of the tunnel. Although I have been unable to catch these tortoises at work, I have succeeded by tolerably safe inferences in tracing their method of operation. When they begin the burrow they endeavor at once to penetrate downward to the level in which they obtain their food. At the outset they manage, by frequently backing out of the passage and thrusting the earth behind them in their retreat to clear a considerable opening. When they have advanced a few feet in the excavation, they cease to discharge the material excavated in their advance, but thrust it behind them, and leave it lying in the chamber, which it entirely closes. With this storage-room provided, the gophers are able to advance through the earth for the distance of some yards; but as the earth compacted by its own weight, by the pressure exercised through the expansion of roots, and the action of the rain, occupies less space than the same material loosened in the progress of the burrow, they soon become hampered in their movements. They then turn toward the surface and continue the excavation until they have attained very nearly to the open air. They then use the great strength which they clearly possess to thrust a quantity of the burrowed material upward until it rises above the surface in the form of a cone, and by the space in the burrow thereby gained they are able to go a few feet further in their tortuous line of advance, when they must again seek to discharge a portion of the earth in the manner just described.—*Prof. N. S. Shaler, in Popular Science Monthly.*

Love in a Cottage.

Love in a cottage. How sweet that sounds! When we think of it we see a cozy little dining-room with a cozy little dining-table, seated before which are the loving young couple. She engineers the tea and coffee pot, while he in a manly way wields the carving-knife. Have they ever quarreled?

No, for they have only been home from their wedding tour a few short blissful days.

Will they quarrel?

S—h! Yes, in a few moments. A fresh clean spread has been placed upon the table, and in a moment she will discover the gravy that he has carelessly spilled upon it. Then the music will begin and the quarrel will be just as warm as if they resided in a great big house.

And will she go home to her ma?

Oh, no, they have not been married long enough for that. They will soon get over their quarrel, kiss and make up, and then live in bliss till another fresh cloth has been likewise soiled.—*Peck's Sun.*

Indian Sense-Training.

A powerful argument in favor of training the senses is the following account of the skill with which Indians judge of distance and direction. It also shows how this ability is acquired. It is remarkable how correct Indians, of all races, are in the adjustment of their work. I have seen other men, mechanics, with plumb, rule and level, fail in laying an accurate horizontal or perpendicular; but with the help only of their eyes, the Indians are invariably successful. This accuracy in straight lines, while it must always elicit admiration, will cease to excite wonder if we remember that, even with an imperfect bow, an Indian will pierce any given leaf on a branch thirty or forty feet high. An Indian, in my presence, in an emergency, once took up a pointed stick and a child's bow made from a part of the wooden hoop of a barrel, and pinned a large snake to the ground, just when it was crawling in an uneven course.—*Youth's Companion.*

Adulterated Food in Paris.

The municipal laboratory in Paris appears to be doing solid work in the way of inspecting, making analyses of and passing judgment on the various articles of food that enter into the daily consumption of the metropolis. The inspectors visit the public markets, the wholesale magazines and the retail stores. Last year 364,000 pounds of meat and fish were condemned, about 1,000,000 pounds of beans, peas, other similar vegetables and fruit and an immense quantity of mushrooms. In July, 1886, out of 100 samples of beer examined, 55 were reported adulterated. At the close of the year the percentage of adulteration was found to have fallen to 7 per cent., and, out of 1,431 examinations made last year, only 39 samples showed adulteration. The improvement in the quality of the milk drank in Paris has not been very considerable in the last year.—*N. Y. Post.*

FAMOUS SITTING BULL.

The Character of Sitting Bull, the Great Chief of the Sioux.

Probably when the facts are all known it will be discovered that Sitting Bull had more to do in influencing the Indians against signing the treaty at Standing Rock than any other man. Bull is an Indian of large brain, as the writer ascertained while traveling with him for three months in the East. He is diplomatic in his nature; not a great warrior, but rather a safe counselor, and as such he has great influence with the Indians. He is a thoughtful savage, and his travels in New York, Philadelphia and Brooklyn, in 1884, taught him the ways of the whites to such an extent that he is now well able to cope with them. He is especially good in making a bargain. Indeed, the writer considers him intellectually one of the most powerful Indians on the American continent. That he has had much to do in shaping the opinions of the tribe there can be no doubt.

Sitting Bull's Indian name is Ta-ton-Ka-i-a-ton-Ka, and he was born on the banks of Grand river, within the boundaries of the great Sioux reservation and about forty-five miles southwest from the present Standing Rock Agency in Dakota. He is fifty-five years of age, has a very large head, is cool and thoughtful, very decided in his ways, and yet will listen to argument and will answer with argument. His original name was Wa-Kan-you-nagin, or Standing Holy, which name he retained until he was fourteen years old, when his father, whose name was Sitting Bull, took him along with him on the war path in the Crow country (the inveterate enemies of the Sioux), and he, the fourteen-year-old boy, counted his first victory by killing a Crow Indian. After returning to their home his father "threw away" three ponies, i. e., killed them in honor of his brave son's achievement, at the same time announcing that he had changed the name of his son from Standing Holy to that of Sitting Bull, bestowing his own name upon him.

In person, Sitting Bull is a solidly built Indian, not quite so tall as an ordinary savage, yet heavier in many respects. His features are strong, and when he walks he turns his toes inward, strikes the ground with a heavy, jarring tread, and moves rapidly like a man of business. His general look is heavy, while that of Little Crow, the leader of the great Indian outbreak in Minnesota in 1861, and Hole-in-the-Day, the great Chippewa chief, were more refined, but none the less true Indians. The Dakotas believe that they must imitate Hay-o-Kah, the undemonstrative god, who inculcates the idea that it is not dignified, or manly, or great to evince lively emotions of grief or joy, but under all circumstances, even of torture and death itself, the Indian must show a stoical, impassive face, and hence the immovable features of Sitting Bull or any other Indian who lays claim to power among his tribe. The principal characteristic of this great medicine man—for he is known among his tribe as such—is his stubbornness of character, the same element which made Grant the greatest warrior of modern times. With judicious management Bull could, no doubt, be won over to the whites, but you can't drive him.—*Cor. Ithaca (N. Y.) Journal.*

FIRST POLO GAME.

Something About the Most Exciting and Exhilarating of Sports.

Polo, or hockey on horseback, as it is sometimes called, is the national game of the people of Gilgit, a mountainous country to the north of Cashmere. Reports had reached India, by way of Cashmere that the Gilgittis were a race of blue-eyed Kaffirs (unbelievers in Mohammed), and it was suggested that they were probably the descendants of one of Alexander's settlements, and to solve this question the Punjab government, in the spring of 1886, depated Dr. Gottlieb Leitner to visit the country and inquire into the history and language of the people. As far as concerns that matter, the language of Gilgit was proved to be a sister language of Sanscrit, and not like Hindi or Greek, a daughter language; but the point of interest for us is that Dr. Leitner took as much interest in the national game of polo as in the language, and persuaded three natives of the country to return with him to British India and bring their polo sticks and ponies along with them. The party reached Sakon, the capital of the Punjab, some time in August, 1886, and the game having been discussed at Government house a couple of teams were got up and the day fixed for the trial games, which all the European residents turned out to witness. The teams were composed of Captain Charles Marshall, Lieutenant Pemberton, Lieutenant R. Nicholetts, Mr. C. F. Amery, Dr. Lietner, Serdan Mohammed, Hyath Khan, the three Gilgittis, and one other, and the game thus inaugurated rapidly acquired popularity, clubs being established promptly at all the military stations. The game was played with an energy, and with such speedy ponies of Arab stock that severe casualties were frequent, so much so that considerable pressure was brought to bear on the army authorities to put a stop to it, but they wisely forbore, and the game was soon transplanted to English soil, where it flourished freely, throwing off vigorous shoots for transplantation in America and the British colonies. It is perhaps the most exciting and exhilarating game known, but it is only Centaurs who can play it creditably and enjoy it thoroughly.—*C. F. Amery, in Chicago Inter Ocean.*

SHE TOOK DELSARTE.

The Unfortunate Display of the Gracefulness of the Frenchman's System.

Wife (addressing her husband who, after dinner, has settled down to a quiet smoke)—My dear, I forgot to tell you I have joined a Delsarte class."

Husband—What sort of class is that?

Wife—Why, a class to receive instruction in the Delsarte system of expression; in short, it embraces intelligent expression without the use of words.

Husband (with enthusiasm)—Good. Any thing that teaches or even advises a woman to avoid the use of words is pointing toward the ideal civilization. But supposing you want money, for instance, how can you make your wants known without the employment of soft and honeyed words.

Wife—You don't understand. The system does not teach us to make known our wants, but to express certain feelings, such as love, tenderness, scorn, and so forth.

Husband—Does it say any thing about the better management of servant girls?

Wife—Of course not.

Husband—Throw any light upon the baking of bread?

Wife—How provoking.

Husband—Well, then, I don't see that it is much use after all.

Wife—It teaches gracefulness and in all ages gracefulness has been held as one of the finest outgrowths of civilization. Now, for instance, what is more graceful than the act of sitting down properly? You must not sit down in sections, but with a sort of lithe swing; and furthermore, you must not look at the chair although you must know that it is there. It is vulgar to look at a chair before sitting down on it. Now, I will walk out of the room, come in, and sit on this chair. See, I will place the chair this way.

[She goes out of the room. The husband turns the chair around. She enters the room, bows gracefully and—sits down on the floor.]

Husband (springing forward and skillfully knocking over the chair to prevent the detection of his crime)—My gracious, did you hurt yourself?

Wife—I—I—fear that it is necessary to look at the chair.

Husband (lifting her up)—Yes, I think so. It is all right to sit down on a prairie without looking at it, but I think that closer observation is necessary with regard to a chair. Delsarte may have had many good points but I fear that he was sometimes wrong.—*Arkansaw Traveler.*

THE METER AT WORK.

A Humorist Tells How the Busy Thing Is Made to Run.

Every other day a man comes from the gas works and after we let him in, he goes down to the foot of the basement stairs and holds a secret conference with the meter. He opens a little door in it and takes a poker and stirs it up inside. Sometimes during the executive session we overhear him sort of growling away to himself, and complaining about the way the meter acts. He will explain to it that it isn't doing as well as Brown's, and that Robinson's is 'way ahead of it. Then he will punch it again with a poker, and we can hear the wheels buzzing around in it. He says meters are like other folks, liable to shirk and not 'tend to business. Then he will hit it another whack, and ask it pointedly if it wants to bankrupt the company. When he gets it running with a low, study hum, he will shut the door and take down some figures in a blank-book, and as he comes up the stairs we will hear him saying: "Three and four and one are eleven, and five are eighteen, and seven is twenty-nine, and six is forty-one, and four to carry is fifty." Then he will go around and look at our burners, and dig away at them with a screw-driver and an old jack-knife, and try to sell us some new jet tips which look like old-fashioned open-top thimbles. He said one day that the superintendent told him that the company wasn't making nothing. I asked him how the stock was selling, and he said he understood there wasn't any on the market just at present. He thought it had been withdrawn to be watered or something like that. Probably they would be awful glad to get rid of it after that.—*F. H. Carruth, in Texas Siftings.*

The Prisoner Was Acquitted.

"Gentlemen," said the Arkansas lawyer to the backwoods jury, "it is a fact that my client was caught fooling around another man's span of mules. But while he may be mistaken when he says that he took the mules out of the stable to water them, because their brutal owner had neglected to attend to their wants, I tell you, gentlemen, that my client can out shoot with a rifle any man within the sound of my voice."

"That's a lie!" yelled the jury in a chorus.

"Very well, gentlemen," said the lawyer. "If you send my client to prison you give him no chance to prove his claims. If you are generous and want to see some of the best shooting ever done in the Ozarks you have only to acquit my client and set up a mark for him to shoot at."

The prisoner was found not guilty.—*Chicago News.*

—The native Hawaiians are said to be disappearing very rapidly, and it will not be long before the race is extinct. Their language is still quite generally spoken, but as English is the language of the court the native dialect is bound to fall into decadence.

INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PRO IETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY JANUARY 19 1889

WHAT IS THE MATTER?

The Los Angeles papers say that that city alone pays out over a million dollars annually for butter, eggs and poultry brought from the Eastern States. The same is said to be true to a less amount of many other places in California. San Francisco, for instance, imported over a hundred tons of poultry for use during the holiday season. One cannot pick up a paper of any importance in the State without finding Salt Lake potatoes, Oregon apples and other products from abroad offered for sale. Yet, likely enough, in the same papers will be found accounts of the fine quality and large crops of apples, potatoes, etc., raised in many parts of California, while as for butter, poultry and eggs—why, everybody knows that these can be produced cheaper and more easily here than anywhere else in the country. Why do you not produce enough for your own consumption? is the natural query of any one who is a stranger to some of the peculiar methods of farming which prevail here. There are a good many things which strike a stranger as being peculiar. When he goes out into the country and finds the Chinese vegetable and fruit peddler driving from ranch to ranch and selling his wares at a round profit he thinks it strange that the owner of hundreds of acres should not be able to find a corner somewhere to raise a garden. When the farmer is seen driving to town for supplies of butter, potatoes, etc., the stranger wonders what farms are for if not to produce just such things as these. When he sees carloads of poultry, eggs and butter roll in from the Mississippi valley and finding ready sale at good prices, he looks around at the hundreds of people who complain of hard times and that they can find no profitable occupation, and wonders why they do not try their hands at poultry raising for instance.

When the stranger sees thousands of acres of fertile foothill and mountain land, adapted to the production of the finest apples and potatoes that were ever seen, lying idle and unproductive while thousands of dollars are sent to Oregon and Utah and elsewhere for these very articles, his wonder still increases, and he is not to be blamed if his estimate of the industry and enterprise of the farmers of California reaches a very low ebb.

There is not one of the branches mentioned but offers to-day a fine opportunity for at least a comfortable subsistence for the man who shall engage in it intelligently and earnestly. There is absolutely no element of chance in it. Men can be shown to-day who for twenty years and more have made a good living and saved money from the cultivation of fifteen or twenty acres of mountain land, and that, too, in an isolated locality, where everything for years had to be packed on burros ten or a dozen miles and then hauled twenty miles farther over bad roads to market. If money can be made under such circumstances, why should any one hesitate to undertake the same pursuits now that the extension of railroad facilities and the building up of towns in all directions has made a dozen marketing points where ten years ago there was but one? All through the foothills and mountains are quantities of land still unentered that are the best apple and potato locations to be found. While those crops raised in the valleys are sometimes not profitable, it can truthfully be said that those produced on mountain ranches have never in the history of the State failed to sell readily and at good prices. Here, then, is an opportunity for profitable employment, which should not, for the credit of the State, be left unimproved until the entire cessation of the importation of poor products into this State shall have ceased.

DESERT LAND FINAL PROOF.

D E No. 250.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL.,
December 13, 1888.

Notice is hereby given that Augustus C. Stevens, of Lone Pine, Inyo county, California, has filed notice of intent on to make proof on his desert land claim No. 250, for the N E ¼ of S E ¼, E ½ of N E ¼ of Sec 2, N W ¼, W ½ of N E ¼, W ½ of S E ¼, S W ¼ of Sec 1, Tp 14 S, R 35 E, M D M, before the Register and Receiver of this office at Independence, on Tuesday, the 29th day of January, 1889.

He names the following witnesses to prove the complete irrigation and reclamation of said land: John Lucas, James R. Moffett, Allen Kenyon and Joseph V. Skinner, all of Lone Pine, Inyo County, California.

JOHN W. P. LAIRD,
o.j26 Register.

A STUDY OF SUICIDE

WHAT LIFE RESCUER O'BRIEN SAYS ON THE SUBJECT

Observations of a Chicago Man Who Has Saved Thirty Human Lives—People Who Want to Drown Themselves—Methods of the Genuine Self Killer.

"When I am free and at leisure I go to Lincoln park. The lake shore there is my field of operation. Most of the drownings take place in the lake off Lincoln park. Dozens of young people are out boating there every day, and once in awhile a life hater turns up, determined to bury himself in the waves. For one who is really tired of life it is indeed a good place. The water is clear, cool and inviting. The confusing roar and noise of this busy city life is far off. Peace, tranquillity and rest reign all around. The place is just made for life haters who, you know, are often capable of walking miles in order to terminate their life in a shady and green spot. Along that very shore I rescued about a dozen people, and at least five of them were would be self murderers.

"During the many years I devoted to this peculiar occupation of mine—that is, to saving the drowning—I observed that not only place and time but also the weather has a great deal to do with the occurrence of drownings. Those who drown themselves in the spring and autumn usually have a weakness for fair weather. They are visionaries suffering from inborn melancholy, and often poets with ruined, dissipated talents. The great majority, however, are poor creatures for whom sunshine is rather invigorating than productive of a desire to die. They think of dying for a long time, but they do it as soon as the weather changes for the worse. If the weather is too bad, if it rains or snows heavily, they will wait. They do not like too bad weather.

"The days on which the drownings and, I suppose, suicides in general are most numerous, are in most cases those on which the sky is enveloped in gray clouds. Everything then seems gloomy and melancholy. An inexplicable heavy pressure upon the breast makes the blood flow slowly and lulls the brain into a dull stupor. The thoughts get confused. Deep sadness seizes the unfortunate sufferers, and whatever unpleasant and bitter their past life contained forces its way out of the depth of recollection, and bursts forth in one agonizing feeling of despair and disgust with the world. Those who try to plunge into the hereafter on such days offer grim resistance, when one comes to their rescue, and without preliminary precautions to rescue them is a dangerous undertaking.

"Many of those who resolve to drown themselves often come to the spot they select for the accomplishment of their resolve, long before taking the final step. They walk up and down along the shore, gaze at the sky, look around shyly, then they begin to stare at the water, endeavoring to measure its depth. When they are about to make the fatal movement they halt suddenly and listen. The chirp of a bird, the splash of a fish, the whistle of a steamer, any sound, any trifling matter unsettles their resolve. They turn round all of a sudden and walk quickly away. A few days afterward they come back and seem to reproach themselves for having been so cowardly before. Instead of walking up and down they now remain standing on one spot. They stare at the water. In their eyes there is not a spark of a thought. They have the appearance of somnambulists. They can neither see nor hear anything. Suddenly, it seems, something startles them. The hat flies from the head, the coat from the shoulders, and—there—they are struggling with the waves.

"Most of them appear on the surface before they finally go down. A genuine self-killer will fold his arms, shut his eyes and go down without any noise. He is half dead already before the unavoidable apoplexy strikes his brain. Those, however, who go into death with some hesitancy, at this dreadful moment are overcome by a powerful fondness of life. They cry and kick and trample with their arms and legs, and when one comes to their rescue they cling to him like a polyp. To die is not so easy a thing after all, and he who attempts to take his own life will not soon repeat his attempt.

"Even the hours of the day are of great importance to the suicides. Generally they choose the afternoon hours, when it begins to grow dusky. Only a small proportion suicide in the morning. At daybreak, when only the street cleaners are at work, in Chicago as well as in other large cities, you can sometimes notice people of all ages and stations of life walk down to the lake or to the river. They look pale and weary, their hair is confused, their clothes in disorder, they look as if they had just come out of their bed. They are gamblers who have lost all their possessions in one night, or embezzlers who have spent the money of their employers in one great debauch, or thieves who are escaping from the police. There they stand at the edge of the water and sigh. Yesterday they were happy and free from all care, today a dreadful end awaits them.

"The darkness vanishes more and more, the city awakens, its noise becomes louder and louder. They sit down and let their legs hang over the surface of the water. Tears fill their eyes, they sob quietly. It is so difficult to die, especially when one is young. The sun has risen high upon the horizon. People hurry down town from all directions. It strikes 8, 9 o'clock—now, perhaps, the embezzlement has been discovered, the police are being notified—another hour passes quickly away. There is no hope left. They look around again and again, then suddenly they shut their eyes and glide down into the water. They think it is all over, but somebody comes to their rescue. When they are brought ashore and they regain consciousness, they send forth shouts of joy. Whatever may come, disgrace or imprisonment—'Thank God,' they repeat, 'I am alive, I am alive!'"—Chicago Journal Interview.

The Musquito a Blessing.

A lecture was recently delivered at Madras, India, on that interesting and familiar pest, the musquito. The lecturer, Mr. H. Sullivan Thomas, asserts that it is only the female musquito that does the biting. He considers the musquito a most useful pest, seven-eighths of its existence being devoted to the service of men and only one-eighth to their annoyance. It exists in the larval state twenty-one days, and during that period engages in sanitary work with ardor and thoroughness. Wherever there is dirty water, wherever there is a filthy drain, there the musquito larvæ are to be found in hundreds, voraciously devouring the contaminating matter.—New Orleans Times-Democrat.

One Way Out of It

Lieutenant (waking up)—Donnerwetter! Already 10 o'clock! John, why did you not wake me when I ordered?

John—I have already wakened you several times, but perhaps you have not heard me.—Fliegende Blaetter.

Another Mean Man.

One of the meanest men on record was a Missourian who had a personal grudge against his neighbor, the coroner, and committed suicide when the latter was away from home on a two weeks' visit.—Chicago Tribune.

MARBLEHEAD NECK.

The waves beat idly, with a ceaseless roar,
And to and fro the seaweed bends to me,
Kissing the great red rocks along the shore,
But thou, beloved, are not here to see.

The sun goes down in glory in the west,
Bathing in crimson every flower and tree,
The white sails redden on the ocean breast,
But thou, beloved, are not here to see.

The twilight gathers and the moon rides high;
I watch its silver track and think of thee;
God keep thy path as bright from earth to sky,
When I, beloved, am not here to see.
—Sarah K. Bolton in Home Journal.

When Sunstroke Is Prevalent.

We generally find that when sunstroke is prevalent the atmospheric conditions are of a certain and definite character. These are found not only in an elevated temperature, but a great degree of humidity or moisture of the air. As long as we have dry air the degree of heat that we can endure without much discomfort is very considerable compared to that when the air is full of moisture. The explanation of this is simply due to the fact that evaporation and loss of heat from the skin and lungs is markedly interfered with, the already moist air being unable to take up and relieve us of the usual amount of moisture. This, coupled with the increased heat, is placing us in a position where our internal production is very apt to be decidedly increased. The only way we have of compensating under these conditions is by lessening exertion, light or modified diet and light clothing. These, coupled with the ever present influence from the heat center, under normal conditions, will usually protect us.—Globe-Democrat.

Not an Agreeable Topic.

A Chinaman dislikes to say that his friend is dead, but will tell you that "his name has been added to the muster roll of ghosts," or that "he has become one of the ancients." "He has returned to the shades," "he has taken farewell of the world," "he has gone a long journey," are expressions all very frequently used when speaking of the dead. The matter is not always treated with reverence, however, for they will sometimes say: "He has swallowed his breath," or "slipped his skin." "The mountain has collapsed" refers to a dead emperor, and "the dream is over" means that a prince is dead.—Boston Budget.

Advance of Civilization.

Don Alphonso, brother of Don Carlos of Spain, traveling as "Don Juan de Huelva, Count de Bourbon," is in Turkestan and is astonished at the progress made there along the Transcaspian railway. At Merv, which five years ago was a crowd of felt tents and mud huts, he found brick houses and macadamized and paved streets, and at the railway station at Bokhara was a luxuriously fitted up buffet with a young and pretty Russian barmaid speaking French and German as fluently as her native language. Twenty years ago no Christian would have been safe in Bokhara.—New York Sun.

The Skeena Indians.

The Skeena Indians are described as of low stature and degraded morals. They are all heathens and sturdily refuse to embrace Christianity. They are wild and lawless, with no more notion of fairness than a wolf, whose character they exactly parallel, inasmuch as when they come to the store alone they are almost vexatiously meek and lowly, but when they collect in numbers they are loud mouthed and menacing. Their faces consist mainly of mouth and cheek bones, with small, flat noses.—Chicago Herald.

Theory of Mind Reading.

The English Society for Psychical Research does not hesitate to accept the theory called telepathy as an approved and demonstrated fact. It is unanimously accepted as the simplest method of explaining a great many psychological phenomena. Brushing away a vast amount of fraud, these men of science do not hesitate to say that it is demonstrable that mind can act directly on mind, apart from such organic communication as is furnished by the body.—Globe-Democrat.

Watching the Heart.

A novel case has been brought to the notice of the Paris Academy of Medicine. A man's breast bone was nearly all removed, with parts of several ribs, in order to stop the progress of bone disease. The experiment resulted not only in saving the patient's life, but has given several physiologists an opportunity for direct investigation of the living heart and great artery, parts of which have been made readily accessible.—Arkansaw Traveler.

How Mrs. Shaw Whistles.

"The vocal chords, which act as vibrating reeds, form, in conjunction with the mouth as a resonateur or hollow reverbrating sphere, the only musical apparatus that can boast of perfection, and it is certain that this instrument, so sweet and effective in speech and singing, can be made equally so when its sounds are made to issue at the self adjusting lips." This is The Saturday Review's explanation.—Home Journal.

Egypt's Movable Types.

Now that they have demolished Columbus' pretensions we are quite prepared to hear that Gutenberg did not invent printing. A Professor Karabaceti has recently demonstrated, at a conference at the museum of Vienna, that movable types of wood, both for letter press and ornaments, were in use in Egypt 500 years before the printer of Mayence.—Boston Transcript

Not Truly Converted.

Citizen—Well, deacon, I s'pose the camp meeting was a great success?

Deacon (dubiously)—Well, I dunno; there were forty-eight converts.

Citizen—Why, that's glorious!

Deacon—Ye-es; but thirty-seven of 'em owe me yet for root beer an' sandwiches.—Boston Herald.

Boilers Without Rivets.

A German manufacturer is now making a boiler in which no rivets are used. The joints are welded, and the cost is said to be slightly in excess of the rivet work.

When a man is deemed reliable out in Montana they say, "He'll stand without hitchin'."—Omaha Herald.

The man who ruleth his own house is greater than he who painteth a town.—Texas Siftings.

There are 50,000,000 cattle of all kinds in this country, and but 200,000 of the pure breed.

Flies don't bother the busy man.—Philadelphia Call.

MARBLEHEAD NECK.

CERTIFICATE OF CO PARTNERSHIP.

STATE OF CALIFORNIA,
County of Inyo.

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, and the firm name and style of Thomas & Hill, the full names of all the members of said partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

In witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA,
County of Inyo.

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill known to me to be the same persons described in whose names are subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL] P. H. MACK,
County Clerk and ex officio Clerk of the Superior Court.

By A. K. EGLEY, Deputy.

(ENDORSED.)

Filed November 28, 1888.

P. H. MACK,
County Clerk.

Working Cisses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5 00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer: To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland Maine

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 10 cents for our 178 page pamphlet. Address, GEO. P. ROWELL & CO'S. NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal, any one can do the work, either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us, and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. GRAND OUTFIT FREE. Address TRUE & Co., Augusta, Maine

INDEPENDENCE, CAL.

SATURDAY, JANUARY 19 1889

Bar silver is quoted at 92¾.

Mr. J. E. Reynolds, of Lone Pine, was in town yesterday.

Mr. J. E. Moffet, of George's Creek, was in town on Thursday.

A son of the famous John Brown died at Pasadena last week aged 76 years.

A stage will leave Bishop Creek next week with passengers for Mojave.

N. G. Fairman came up from Panamint and was in town several days this week.

Mrs. Gould, wife of the great banker, Jay Gould, died in New York City on the 13th inst.

Messrs. Harvey and Castro, of Lone Pine, were at Independence at the early part of the week.

Quite an excitement was caused Monday evening by the burning out of a stove-pipe in the Pioneer Brewery at Independence.

There is a Western man who is bound to make his fortune. He is selling an adjustable engagement ring, warranted to fit any finger.

Mr. J. C. Eddy has so far recovered from his recent illness as to enable him to return to Darwin to attend his many business interests there.

The Camp Independence school is very much overcrowded. There are forty-three pupils attendance with seating capacity for but twenty-six.

Miss Eugenie Meysan, of Lone Pine, has gone on a visit to her sister, Mrs. Julian, at Los Angeles. She will remain during the winter.

The mother of Sunol, Stanford's $50,000 two-year-old filly, is a sister to Albenton, the fine trotting stallion owned by W. S. Enos, of Camp Independence.

N. Rhine is having a large amount of corn ground at his warehouse at Independence. The greater portion has been sold to Mr. McIver of the Eastside Canal.

Rev. E. McEvers will preach to-morrow—Sunday—at Lone Pine at 11 o'clock a. m.; Independence 7 o'clock, evening. Sunday school at the M. E. Church at 11 o'clock a. m.

Mr. M. Grijalva died at Lone Pine last week. Mr. Grijalva was a quiet, retiring man who was respected by all who knew him. His death is deeply mourned by many relatives and friends.

Quite a number of mining claims have been located during the past few days. Some are new claims and others are mines upon which the assessment work had not been done and are relocated.

A San Francisco man has asked to have a guardian appointed for his wife. She is laboring under the hallucination that he has been converted into a pig, sometimes in the Buddhist order. Queer, ain't it.

There is talk of instituting a lyceum at Independence. This would certainly be a most agreeable way of spending an evening each week, aside from the good that may be accomplished, and the matter should be encouraged.

G. H. Palmer, the Lone Pine Road Master, has been doing some good work at George's Creek. Quite a stretch of road at that place has been plowed and raised so as to render it dry and hard at all seasons. It is a much needed improvement.

Under the guidance of the pastor, Rev. E. McEvers, a Sunday School has been established at Lone Pine. Whether the dogmas of the faith are accepted or not the effort is certainly conducive of good and should be assisted in by the entire community.

The Crocker Brothers, of Big Pine, have made vast improvements in their property during the past six months. Barns, corrals and fences have been built, willows and sagebrush cleared away, in fact, everything about the place denotes energy and enterprise.

There was a light fall of snow 1st Sunday evening, enough remaining under the hedges to afford the amusement of snow-balling early in the morning. The "beautiful" disappeared by noon, however, much to the disgust of the younger population to whom the pleasure of "washing faces" does not often occur in Inyo.

The Los Angeles & Salt Lake railroad scheme has a powerful backing in New York City, and will result in a connection with a road coming East, which will give Los Angeles another transcontinental railway. It will traverse a region abounding in cheap coal and valuable ores, and will make Los Angeles a great smelting and manufacturing center.—*Herald.*

The road between here and Olancha must be in a very bad condition. Ed. Walker left the latter place for Independence last Sunday but we hesitate to say how long it took him to make the trip. It might injure our spotless reputation for veracity, because everybody don't know what an attractive place Lone Pine is.

On Friday evening of last week the little schoolmates of the Gregg children tendered them a delightful surprise party. The evening was passed in mirth and jollity which was not a little contributed to by the efforts of the teacher, Mr. Dan. Crough. It will be a delightful reminiscence of their last stay in Independence for the children.

Mr. S. Zaun, the veteran tailor of Lone Pine, has sent up two varieties of wine that he has made from his vineyard at Lone Pine. Considering the limited means at his disposal Mr. Zaun has certainly perfected an excellent article. The wine is new and of course has not that mellowness that age alone can give. As an experiment it is most successful and proves that Inyo wines will become a valuable market product.

There seems to be no limit to the eastern cyclone belt. The most terrific storm that has occurred for a long time swept through Pennsylvania last week. A funnel shaped cloud swept over a path about 200 feet wide destroying everything in its way. A great number of lives were lost and much damage resulted. The spring zephyrs of Inyo may be disagreeable, but they are surely preferable to the all-destroying storm demon of the East.

ARTESIAN WATER.

The subject of well boring has been so often discussed throughout the valley that a lengthy article upon that head could not fail to be a repetition. Some time ago an outfit for well boring was sent for by Messrs. Anger and Partridge, of Camp Independence. At his ranch, four miles south of town, Mr. Henry Clark was desirous of sinking a well to obtain water for household purposes. He could not wait until the arrival of the well boring machinery so he rigged up a contrivance of the most primitive kind and started in. The house stands on the dividing line between the sagebrush land of the valley, and is on the gradual slope from the mountain side and not on any wash or arroyo. In the yard, about twenty feet from the house, a circular hole four feet in diameter was sunk to a depth of fourteen feet. This carried the tube through the dry surface ground and hardpan into the first gravelly water-course. A lever loaded with heavy weights was fastened to the tube, forcing it into the ground. A piece of four inch heavy pipe, one end of which was sharpened and fitted with a drop valve was let down the inside of the six inch tube by means of a rope. By constantly raising this pipe and letting it fall the earth was cut loose, passing to the inside of the pipe, where it was retained by the valve. Whenever the pipe was full it was taken out and emptied and the work resumed, the tube sinking as rapidly as obstructions were removed. This was continued until the top of the tube, which is twenty-four feet in length, now stands about eighteen inches above the surface. Several stratas of gravel were struck, the last of which, as soon as the tube entered it, threw a jet of water out of the top of the tube, which has since then continued to flow, though only a small stream, as, of course, no great pressure could be obtained at that slight depth. Regarded as an experiment, this is certainly a conclusive proof that artesian water can be found. The question to be determined on the arrival of the well boring plant is whether or not the flow would be greatly augmented as depth is attained. In the light of all previous experience this should certainly be the case, and with such a vast watershed as Owens valley boasts will undoubtedly prove true. A spring can be regarded as only a natural artesian well, and no county on the coast has so many springs as Owens valley, the largest of which at Black Rock flows with a strong current through an aperture six feet wide by four feet deep. Nearly all of these, however, come to the surface low down in the valley through cracks made by the great earthquake and flow upon land that is already too wet. It is certainly no more than a reasonable supposition that if an outlet could be found higher up on the valuable foothill land, the water would rise there and render thousands of acres fit for vineyards and orchards that is now valueless. Certainly every natural indication proves there is a great artesian belt in Owens valley.

Mojave.

Mojave is steadily growing. Some half a dozen new buildings have just been completed and more are under way. The Coleman Borax Works, now idle, are expected soon to resume operations on a large scale. The Charlton Borax company delivers three eighteen-mule loads of borax weekly—perhaps thirty tons. Much is expected from the revival of the borax and mining industries of the desert when the narrow-gauge shall have been extended from Keeler. About two miles east of Mojave, fairly in what is called the desert, an artesian well, now 195 feet deep, is going down with appliances equal to putting it 800 feet. The soil will raise anything, and the climate farms everything if water can be had.

Should Attend

It is proposed to call an informal meeting for Wednesday of next week for the purpose of discussing the advisability of organizing a local Board of Trade to affiliate with the State Board at San Francisco, for the purpose of bringing to public notice the extent and value of the resources of Inyo county. In view of the fact that it is proposed to organize a Chamber of Commerce at Los Angeles to promote the interests of the entire Southern portion of the State it will perhaps be more advantageous to us to link our interests with the latter place. However, as there is a greater probability of doing not too much but too little Wednesday's meeting should be well attended and the matter fully discussed.

Hotel Opening.

Mr. and Mrs. Swindells the worthy host and hostess of the new Railway Hotel at Belleville, celebrated the opening of their hotel last Tuesday evening with a dance and general housewarming, the guests coming in large numbers from many of the surrounding towns; the dining room, which is of large dimensions, made an excellent ball room. Everyone present entered into the enjoyment of the occasion with zest, making a merry and most pleasant evening, carrying on the affair till the departure of the early morning trains for the north and south.

Has Returned.

Mr. S. H. Bigland, of San Francisco, is visiting Independence and vicinity. Mr. Bigland visited Owens Valley about three months ago and was so pleased with the appearance of the country that he determined to return for the purpose of seeking investment. He has a large acquaintance in San Francisco and his report to them may induce a number of people to come here. He has opened an office at 39 Sutter street with the intention of bringing Owens Valley lands to the notice of the home seeking public.

Lone Pine School.

The Board of Trustees of the Lone Pine School District, were engaged during most of Wednesday and Thursday examining into the charges preferred against the teacher. After an investigation of the most searching kind, the Board by a unanimous vote adopted a resolution freely and entirely exonerating him from any and all the charges.

A Pleasing Sense

Of health and strength renewed and of ease and comfort follows the use of Syrup of Figs, as it acts in harmony with nature to effectually cleanse the system when costive or bilious. For sale in 50c. and $1.00 bottles by all leading druggists.

Inyo County, Cal., will soon prove the adaptability of her soil and climate for grape culture. Several thousand cuttings passed through Reno for that county Friday morning. Many of the foothills of Nevada are adapted to the vine, and are awaiting the needed enterprise to give them a test.—*Gazette.*

A Valuable Work.

A literary enterprise which may well be ranked as one of the greatest, and, for the mass of intelligent readers, one of the most important of the century, is the publication of Alden's Cyclopedia of Universal Literature. The names included in the list of ninety-five eminent authors represented in Vol. X., serve to illustrate the scope and the popular character of the work. Nationalities represented are: Italian, French, Scottish, German, American, Swiss, English, Persian, Canadian and Irish. Each author is presented in a concise and brightly written biographical sketch, following which is a specimen of his or her writing, translated into English, if a foreign author. Guicciardini writes of the trial and death of Savonarola; Guizot, of the Crusades; Caesar in Caul, the St. Bartholomew Massacre, etc.; pious Madame Guyon, of God, the Fountain of Love; through John Habberton, Bugge explains; Hafiz presents a Persian Song; Sir Matthew Hale gives Counsel to his children; Haliburton, Sam Slick's Opinion of Britishers; Hallam treats of Mediaeval Booksellers, Early Copyrights, etc.; Alex. Hamilton, of the Necessity of a National Bank; John Hancock gives his Oration on the Boston Massacre; Bret Harte, a number of characteristic short stories; Nathaniel Hawthorne occupies 33 pages, and his son Julian, 4 pages; Hegel, German philosopher, is given 7 pages, and Heine, the poet, 13 pages; Patrick Henry speaks of the Abolishment of Slavery, etc., and George Herbert sings of Paradise. Even this list does not adequately illustrate the variety, since from it are omitted Rider Haggard, sensational novelist, and Helmholtz, popular scientist, and so the list might be continued. The work is, emphatically, ode for every home library; it is handsomely got up and being sold at Alden's characteristic *Literary Revolution* price, of 50 cents a volume, it is easily within the reach of every lover of good literature. Address the publisher for his free catalogue.—John B. Alden, 393 Pearl St., New York, or 218 Clark St., Chicago.

A recent visitor to Owens valley arrived at Independence late one evening and departed early the next morning, declaring there was too much sagebrush for him. He had ridden through the uncultivated portion of the valley, east of the river, on the train. Had not visited a single ranch and made no inquiries. He was from the East and we sincerely hope he has returned. Such an erratic course would warrant the supposition that he had stopped over in Utah and made experiments on himself with loco weed.

At about 10 o'clock on Sunday morning last a quiet wedding took place at the farm of Mrs. Ada Stewart, near Bridgeport, the high contracting parties being Mrs. Stewart and ex-Supervisor Harvey Boone, of Bodie. The ceremony was performed by Hon. O. F. Hakes, Superior Judge, in the presence of the near relatives of the bride. The happy ones soon after departed for San Francisco on a bridal trip.

A very rich mining region is reported to have been struck about three days drive from Phoenix, A. T., in the Harqua Hala mountains. Different correspondents writing from there describe it as being immensely rich and of course people are flocking there from all directions. But since the Coeur d'Alene fizzle the prospector's bump of caution should be well developed.

MARRIAGE GUIDE
260 PAGES. Illustrated. In Cloth and Gilt Binding, handsomely or same name, paper cover, 25c. This Book contains ALL the curious, doubtful or inquisitive want to know. Full of very interesting and valuable information, HEALTH, BEAUTY and HAPPINESS are promoted by its advice. Young or old, married or single, sick or well, should read. Sent free by DR. WHITTIER, 34 Louis. CUT THIS OUT AND SEND WITH ORDER.

THE BOWSER FAMILY.

Epistles Which Turned the "Old Man's" Wrath Into Confusion.

Some time since I referred to the fact that I had carefully preserved, arranged and filed all of Mr. Bowser's love letters, and I advised every bride to do the same thing. I now desire to reiterate that advice. I really don't know how I could get along with Mr. Bowser if I did not have this leverage on him. Like all other husbands he has his sudden fits and his hours of forgetfulness. He wanted a pair of pincers to use for something, and because they were not right at hand he made a gesture of despair and exclaimed:

"O, of course, I must get used to it, I suppose. Such a housekeeper as you are Mrs. Bowser!"

"Here they are. You left 'em on the lounge yourself last night."

"Lay it to me, of course. What's that young'un bellowing about now?"

"He fell down."

"Doesn't he know enough to stand up? Did the wood come up?"

"No."

"It didn't." I ordered it the first thing this morning. This is the worst run house in Detroit."

"Do I run the wood yards?"

"But why didn't you tell me it hadn't come up? It's a wonder the girl hasn't quit to climax our troubles."

"She went an hour ago."

Mr. Bowser sat down and looked at me a long time. Then he sighed deeply and said:

"Well, I suppose I must stand it, but it's hard, very hard. This is what comes of marrying a girl who has been brought up on caramels and novels."

I went up-stairs and brought down the package of letters. Selecting one marked: "Exhibit A—filed September 10, 1884," I began to read:

"MY ANGEL ONE: I send you another box of caramels and five of the latest novels, and I hope you will thoroughly enjoy them. You were lamenting the fact that you knew so little of housework. I am glad of it. Angels are not expected to fry pork and wash dishes. You shall have a dozen housekeepers when we are married, and you shall never know a household care."

"That's a base forgery!" shouted Mr. Bowser as I finished reading.

"Oh, no, it isn't. I expected the day would come when you would say so and so I prepared for it. See here: My mother attests it as a witness."

"Well, if I wrote it I must have been asleep."

"And only the other day, Mr. Bowser, when I got a new dress home, you said I hadn't any more taste than a clam, and that my ideas of harmony wou'd stop a clock."

"Yes, and I meant it. You were always that way."

"Was I?"

I selected a letter marked "Exhibit A—2—filed September 18, 1884," and read:

"MY BEAUTIFUL: The picture of my dear one as she appeared to me last night has been with me all day. You have the taste of a queen in your toilet, and harmony is second nature with you. Oh! my little angel, you—"

"I wrote that, did I?" sternly demanded Mr. Bowser.

"Of course."

"Never! The man who says I was ever fool enough to write such stuff must die!"

"It is duly attested, Mr. Bowser, and you can't deny your writing. I haven't changed a bit in my tastes since our marriage. Indeed, I think I have improved."

"There goes that young'un again! He isn't happy unless he is bellering like a calf mired in a ditch."

"But see here, Mr. Bowser."

And I selected a telegram marked: "Exhibit B—1—original," and attested by father, mother and nurse, and read:

"CHICAGO, November 20th, 1887.—*My Darling:* Thank God for the news of the birth of our son! My heart swells with love and gratitude. It is our bond of love. Heaven has surely blest us. Again, thank God. Will be home Tuesday night. Bowser."

"I never sent it," shouted Mr. Bowser.

"Yes, you did! Here is the proof to convict you. There isn't a mention about 'calf' in this, and as for 'bellering, you never dreamed of it."

"Oh, well, have it your own way. You'd have the last word if I was dying. Some wives are built that way. If I was like some husbands I'd assert my authority."

"But you are not, Mr. Bowser, as this will prove."

And I selected a letter marked: "Exhibit C—1—original," and attested, and read:

"MY DEAREST LOVEY: In reference to our conversation last night, I wish to say that I have always held and always shall hold that husband and wife should be equal in authority. Neither has the right to dictate to the other, though if either had that right I would give it to you. We shall never have a word of dispute—not one. If there is any 'bossing' you may do it."

"And do you dare charge me with writing such stuff as that!" gasped Mr. Bowser.

"I do. Here is the proof, and you can't wriggle out of it."

"I wrote 'Dearest Lovey,' did I?"

"You did. Indeed, Mr. Bowser, you were far gone about those days."

"I was, eh! Well, you can't make me believe that I ever wrote any such infernal bosh as that! You'll next charge me with writing you up in verse."

"You even did that, sir. Just wait."

I selected a letter marked: "Exhibit C—1—very choice," and read:

"The twilight softly cometh down,
As sinks the sun away,
And little children go to bed,
All weary with their play.

Where is my love this glorious eve?
Where doth her proud foot rest?
And where that head of golden hair
Which I shall ever bless?"

"And you say I wrote that!" whispered Mr. Bowser.

"You did. It's a beautiful thing, too. I can see those little children going right to bed. You spoke of my 'hoofs' the other day, and you had a slur about red-head! Only four years ago it was my 'proud foot' and my 'golden head.'"

He was silent.

"Do you want any more, Mr. Bowser?" I asked.

"Mrs. Bowser, I don't say that you are not as good as the average wife, but I do say that you have a mighty mean streak in your composition. It may be possible that while I lay burning with fever, or while suffering a nervous attack, I may have written a portion of those letters. The rest are base forgeries, of course, and you are holding them over me as a menace. Is that wifely?"

"Why, Mr. Bowser, do you deny your own hand-writing?"

"I haven't seen the writing and don't want to. Don't threaten me, Mrs. Bowser. I can be coaxed, but not driven. Cases have been known where husbands walked out and never returned."

But that was only his way of wriggling out of it. The next day he sent me up a new dress, took baby for a long walk, and at present is the most docile husband in Detroit.—*Detroit Free Press.*

TOQUES AND TURBANS.

The Various Styles in Which They Are Made by Fashionable Milliners.

Toques, turbans and walking hats are made in various styles for young ladies to use for general wear, and are adopted for morning hats by those who are older. Paris milliners are sending over round toques in contrast to the long oval-crowned toques imported from Regent street, which English women of fashion adopted at first merely to wear with tailor gowns, but which they are now using with their handsomest costumes. The round French toques are made of velvet or of cloth in three soft puffs around the head, separated by folded bands of gros grain ribbon, and have a soft wrinkled crown which is covered and flattened on the right side by a very large rosette of the ribbon, with its longest loops coming forward almost to the front. This style is youthful, and is excellent for hats of a single color, the velvet and ribbon being all brown or all black or gray, as best suits the gowns of the wearer, a black toque being now appropriate with dresses of any color. Other velvet toques have fur tips for their only trimming, as short tails of sable with a miniature sable head set in the front of the soft crown. Ribbon toques are also new, and are in the long English shape; two kinds of ribbon are used, velvet in one row draped along the brim, and ending in two rosettes in front, while the crown is covered with three lengthwise rows in loose folds of the new satin ribbon that has raised cords in it, or else gros grain ribbon; these form standing loops in front between the velvet rosettes. Black velvet ribbon with a green ribbon crown makes a stylish toque, or cream velvet with fawn robbon crown, brown with cardinal, or olive with red, matching the two colors that are combined in the costume. The handkerchief turban is a pretty caprice, with the crown draped with a square of black velvet on which white gros grain is set like a hem or binding half an inch or more in width. Rosette turbans have soft rosettes of doubled silk thickly gathered set in front of shirred velvet crowns. Other velvet turbans have a frill falling on the lower edge, with a gathered band, and above this a soft puffed crown. Embroidered cloth turbans may be merely scalloped on the edges, but many are covered with embroidery. There are also very rich embroidered cloth leaves and bands that are used to trim the sides of velvet and plain cloth turbans. Braiding and cording are also fashionable on these small hats. Long slender oxidized silver pins, daggers, and clasps are fashionable ornaments. Ribbon bows are very tightly strapped with long loops, and these rival rosettes in popularity.—*Harper's Bazar.*

Fish That Annoy the Diver.

As to the fish the diver sees, they are legion. They swarm all around him. Hideous sculpins peer into his eye-windows and grin horribly, and snake-like eels glide over his feet and squirm round his legs, and crabs and lobsters claw at his clothing and make themselves familiar in a cordial manner that would make anyone except a stoical diver go out of the water. But it's the simple, every-day perch, the little fish that the boys catch at the wharves that bother the divers the most. They seem to think his fingers are bait, prepared by an overruling providence for there special appetite, and accordingly they nibble and gnaw the bare flesh with the same persistency that they employ in devouring angle-worms sent down on fish-hooks. You see, it's not fashionable among divers to wear gloves when diving in warm water. Gloves would greatly decrease the delicacy of touch with which the diver examines the slimy pile in search of worms.—*Philadelphia Inquirer.*

—"What's the matter, Darringer? You look dispirited." "I'm troubled with too much mother-in-law." "That's bad, old boy. How often does she visit you?" "Twice a year." "That isn't often, Darringer." "No, it isn't, only that she stays six months at a time."—*Time.*

—Mrs. Cleveland has become an expert lawn tennis player. She is able to serve a ball with skill and energy, and her volleying is remarkably effective.

—Proprietor (to recently engaged waiter)—"You will have to go; I can't keep you." New waiter—"What's the matter?" Proprietor—"Whenever a customer asks you if the fish is fresh you get red in the face. You'd break up the whole business in a short time."—*Texas Siftings.*

—"How many sons have you?" "Three, and two of them are right good boys." "What's the matter with the third?" "Well, you see, Tom and Bill stuck to the farm and worked hard but Jim he went to the city, and he's never done a lick of work." "What business is he in?" "He's a champion of the laboring man."—*Lincoln Journal.*

—Attorney (to colored witness)—"Mr. White, I understand that you detected a discrepancy between the two statements made to you by the prisoner." Mr. White—"No, sah, I didn' 'tec' no 'screpancy. What I said wuz dat de fust time he done tole me he crib dat ham, an' de nex' time he sayed he nebber saw de ole piece ob meat."—*Drake's Magazine.*

SCHOOL AND CHURCH.

—A charter has been granted to Rutgers Female College, empowering it to confer the usual college degrees.

—Oberlin College gets $60,000 by the sale of the Maplewood property in Pittsfield, Mass., which was generously donated to it several years ago.

—The authorities have already decided upon the Sunday-school lessons for 1890. The entire year will be occupied with the life of Christ as recorded by Luke.

—At Juju, Africa, the converts have erected a house of worship for themselves, and the two leading heathen priests have thrown aside their idols and left the idol-house to decay.

—The largest salary received by an American bishop is that of the bishop of New York, which amounts to $10,000 a year. The bishop of Maine, who receives $1,300, has the smallest.

—One hundred years ago the Presbyterian church consisted of 178 ministers and 18,000 communicants. The last minutes show that there are now 5,654 ministers, 6,436 churches and 696,757 communicants.

—There are now in this country at least thirty institutions to train men and women for distinctively Christian and church work among the Germans. The greater number of these are supported by the Lutherans.

—Since the Methodist bodies in Canada were united several years ago, their polity has been more nearly Presbyterian than Episcopal or Congregational, so much so that the subject of the union of the Methodists and Presbyterians is by no means considered hopeless. The Methodists now have no "Bishops," but "Superintendents."

—In the past ten years the increased enrollment in the public schools of the United States was nearly 32 per cent., while the children from six to fourteen years of age increased but 29 per cent. In the South Central Division the increase in children from six to fourteen was about 30 per cent., while the increased enrollment was nearly 109 per cent., and the increase of expenditures was about 74 per cent.

—The "Pacific Garden" mission of Chicago is in one of the worst neighborhoods of this city. It has been in operation eleven years, and the annual report just issued shows substantial vitality. It provides services every night in the week and on Sunday mornings. These services have been attended in the eleven years by some 600,000 people of various races. In one meeting representatives from thirteen different nationalities took part. Thirty thousand have in that time professed conversion.

For the Neck and Sleeves.

A novelty for the neck is a *gorgerette*, or short ruff of lace, plaited very full, to be worn high about the neck and tied with a bow of ribbon. It is used in all colors as well as in black and white, and costs one dollar. Longer ruches of raveled silk are to be passed around the back of the neck, and pointed in V shape in front. Pierrot collars of wide lace in fine plaits are widely turned down around the neck, and are also made of lisse and of silk muslin in white and colors. Standing collars are covered with folds of silk muslin, and have a knife-plaited jabot down the front to fill in the space between the wide revers now worn on dress fronts. A very large cravat bow without ends is made of lace in two great loops, and is worn with the fashionable tea gowns, jackets and house waists. Colored ribbon edges with a bow on the left side are seen in the neck of French dresses, also in the sleeves. There is, however, a great tendency to use laces again as a finish to the neck, the front of the corsage, and the sleeves, especially the small-figured sprigged Mechlin laces and the tiny-dotted point d'esprit lace that now has a wide leaf or flower pattern in its scalloped edges. Lace three or four inches wide is again gathered inside the sleeves to show about an inch falling on the wrists, then allowed to drop its full width through a slit two or three inches in length up the outer seam. This is reversed in other dresses, the lace being caught up outside the sleeves on the inside seam. Double jabots of lace are wide at the throat and taper to a point at the waist line.—*Harper's Bazar.*

Feminine Vulgarisms.

Girls are actually chewing gum again, and in public places, too! If they could look accidentally into a mirror, while tasking the lower part of the face so unmercifully and see themselves for a moment with unrecognizing eyes, the vulgar habit would die on the spot, as will their beauty if they persist in it. I wonder if the man exists who could connect romance with a gum-chewing girl? There's something intensely prosaic in any thing that suggests eating, even if it be only the munching of candies at matinees, concerts and lectures. The vulgarity of the act, in any public place whatever, is apparent at a glance—vulgarity of a bad taste, of appetite, and of the display of eating, as well as the scattering of the redolence of the candies upon the atmosphere in many instances; the habit, also, being one which has inspired the witty pencils of many among our eminent caricaturists. But gum-chewing is infinitely worse than candy-munching, and has not even the advantage of satisfying the appetite. Don't transgress in this way at all, girls; but if your mind insists upon being engrossed by some sort of chewing, at least draw the line at gum.—*Christian at Work.*

Farmers fine Phosphate (free from fictitious frauds) for fertilizing fruit farms, $25 ton; $1.50 per 100 lbs. Smith's, 418 Front Street, San Francisco.

Up in Arithmetic—Teacher (of arithmetic class)—Tommy Twaddle may tell us what a league is. Tommy (promptly)—A league is eight base-ball teams.

Dujardin's Life Essence is very valuable where the stomach is unable to extract from the food the albumen and phosphorus. The Life Essence is immediately absorbed, and nourishes the nervous system, without any aid from digestion. Price, $1.50 a bottle. All druggists.

THE 19TH ANNUAL RECORD.

Its Enormous Total and Wide Distribution. Caprices of Fortune.

A partial list of the prizes of Two Thousand Dollars and over, paid by the Louisiana State Lottery Company during the year ending November, 1888, together with the names and addresses given to the Company by the holders, omitting those who have requested it.

Receipts for the amounts are on file at the offices of the Company.

A VAST REPUBLIC.

The New Nation Which Is Growing Up in the South Seas.

Our own lack of enterprise in permitting Germany to seize Samoa brings to mind the fact that Great Britain also has been derelict in the management of her Australasian affairs. When it is remembered that fifty-three years ago the only Europeans in the colony of Victoria were a few whalers and squatters we can readily comprehend the self-reliant and enterprising qualities that have been exercised in order to elevate Australia to the position which she occupies to-day. And it is only natural that the people, believing implicitly in the greatness of their future, should become alarmed when they see France sending her convicts to the South Pacific and witness other aggressions in the Australasian seas. Although Great Britain has at last taken formal possession of New Guinea and of the Cook, or Hervey, group of islands, the vacillation which she has shown in this matter is inexplicable. Two years ago the colonial Government of Queensland took possession of unoccupied land in New Guinea in the name of the Queen, subject to ratification by the imperial Government. But when the question had been brought up in the House of Commons pressure was put upon the Government to repudiate the annexation, and while the matter was being held in abeyance Germany stepped in and took possession of one-half of what might have been British territory. Holland and Germany have now the greater portion of the country, and England has had to be content with what was left, the indistinctness of the boundary lines being likely at any time to lead to serious disputes. Besides these grievances, which come from without, there are also internal difficulties that may yet have great influence in shaping the future of the Australian colonies. The people of North Queensland want that colony divided. They realize that they have developed its resources and created its trade, and that they ought to be allowed to frame its laws. They complain of undue centralization and demand an extension of the existing powers of local government, but so far their petition has been unheeded. Movements such as these are significant. Great Britain has the power to weld her Australian colonies into a compact and harmonious whole, and she would be aided in such efforts by the loyalty which has always distinguished her people, but she has already committed grave blunders, and the bond of sympathy is constantly becoming weaker. As Mr. Froude has said, the cord will wear into a thread and any Governmental accident might then break it. When that time shall have come there will be another added to the world's republics.—*Philadelphia Record.*

HABITS AND LONGEVITY.

Researches Bearing on the Prolongation of Human Life.

The information which the blanks give on the subject of habits coincides with the opinion of most people, formed from observation, that longevity without regularity of habits is rare. Those old people, men and women alike, are put down as early risers and retirers, almost without exception, and fully nineteen out of twenty have observed this custom throughout life, except perhaps at some short period in youth. Meals have been eaten regularly, three each day, with dinner at noon, the exceptions being so rare as to indicate nothing. Exercise in most cases has been hard work up to sixty-five or seventy, and after that period has consisted (when the regular occupation has been given up) of walking, gardening, or both. Except in cases of sickness these old people are as a rule as active and as fond of constant occupation of some sort to-day as most men and women are at thirty-five.

One of the most significant facts gathered in this canvass is that regarding occupations. Out of 1,000 men, throughout life, 461 have been farmers; 92 have been carpenters; 70, merchants; 61, mariners; 49, laborers; 42, shoemakers; 41, manufacturers; 23, clergymen; 23, masons; 16, blacksmiths; 16, bankers; 12 each, ironworkers, mill-hands, physicians and lawyers; and the balance are divided among nearly all the other trades and professions. The list includes only one each of the following: Hermit, hunter, chemist, professor, soldier, broker, auctioneer, jockey, contractor. Nearly all, however, began life upon the farm.—*C. M. Hammond, in Popular Science Monthly.*

The Future of Africa.

Africa has been long known as the Dark Continent. At the present rate of research it is soon to be properly known as the Light Continent. It is already as well known as South America; and there is no small section of North America still unexplored. Africa is not only being well traversed by explorers, but the progress of Arabic invasion from the East, although accompanied by some evils, is nevertheless laying open the land to commerce and a certain degree of civilization. Add to this the impulse given by the enterprise of Emin Bey and the fate of Stanley to send out European armies with the purpose of opening the land to travel and trade, and the probabilities are that no portion of Africa will remain secluded from the world at the end of another decade. It is not improbable that the end of the twentieth century will leave Africa the most important continent on the globe. The proportionate influence of Europe already wanes.—*St. Louis Globe-Democrat.*

ROMANCE OF ROYALTY.

An Emperor Who Preferred the Madcap Sister to His Stately Fiancee.

Caroline, the eldest and perhaps the most beautiful of the daughters of the Duke Maximilian in Bavaria, was, while still a child, selected as a fitting bride for the heir to the Austrian crown, and although there was no formal betrothal, her father was informed that she must be educated in such a way as would fit her for future grandeur. This was more easily said than done, for money was scarce in the ducal palace; but the whole family, from the Duke himself to his youngest child, seem to have thrown themselves con amore into the work, and to have cheerfully economized for the sake of the fortunate Caroline. She had professors and teachers of the best, and she well repaid all the care that was lavished upon her, for at nineteen, clever, accomplished and regally beautiful, she was the very ideal of what a Queen should be. But,

The best-laid plans o' mice an men
Aft gang a-glee.

When the time for the marriage drew near the young Emperor Joseph came on a visit to the Duke in Bavaria (the family title is "in," not "of,") that he might make the acquaintance of his future wife. He gazed at the stately young creature who had been so carefully trained for him with respectful admiration, but he fell violently in love with her madcap younger sister, Elizabeth, who, regarded in the family as a mere young child, and one, too for whom no high destiny was in store, had been allowed to pass her days on horseback scouring the country side. Ministers and courtiers stood aghast, but argument and persuasion were alike wasted on the Emperor, who refused to see that a lack of accomplishments was a blemish in the one whom he loved, and a few months later Elizabeth, though child as she was, knowing no more of the etiquette of courts than the veriest little gamin, entered Vienna in state as Empress of Austria and Queen of Hungary.

Although this happened more than thirty years ago she has not yet learned to submit with patience to the restraints that hedge in the lives of sovereigns; and the Viennese, in spite of their love for their beautiful Empress, openly mourn that the Emperor should have chosen one who regards a court ball as a penance and a state ceremony as a thing scarcely to be lived through. From the day of her marriage it seems to have been her constant endeavor to shake off the fetters of her station, and perhaps the happiest hours of her life are those in which, while following the hounds in England or hunting the chamois in her native land, she is able to forget that she is Empress-Queen.

For her age the Empress Elizabeth is the youngest looking woman in Europe. When one sees her slight, graceful form, eyes brilliant with life and vigor, and complexion that flushes and pales with every passing emotion, it seems absurd that she should be the grandmother of big boys and girls.

Caroline, the forsaken one, seems to have met her fate with true royal equanimity. Perhaps she thought that as her sister gained what she lost it did not really matter. If one may judge by her face her life has not been a happy one. When she was about twenty-four she was married to the Prince of Thurn and Taxis, who died some nine years later.—*Cornhill Magazine.*

Naturally Reduced Iron.

A notable example of naturally reduced iron is said to be found on the North Saskatchewan river in the Northwest Territory of Canada and near Edmondton. It appears that along the river bank a lignite formation crops out for several miles, overlaid by clay shales and soft argillaceous sandstones, containing nodules of clay ironstone, these nodules being similiar to others found at Edmondton, and proved by analysis to be carbonates of iron, containing about thirty-five per cent. of metalic iron. It also appears that this Saskatchewan seam of lignite has at some time or other been burnt, leaving a bed of ashes, clinkers and burnt clay in places twenty feet thick, and now covered by a dense growth of grass and underwood. From this mass of burnt clay, pieces of metalic iron are picked out weighing in some cases fifteen or twenty pounds, and which have evidently been reduced from the nodules abovementioned by the heat of the burning lignite. Most of these pieces of iron are very much rusted, but on being scratched with a file they show a bright surface.—*N. Y. Sun.*

Origin of the Mosquito.

Mexico is in a quandary as to where the first mosquitoes came from. It is claimed that before 1885 no mosquitoes were ever known in our sister republic. We do not believe that the little scavenger has such a respect for national boundaries. It swarms at the North Pole. It lunches off the ice at the South Pole. It sails across the equator, to and fro, on every floating chip. It is on the top of the Alps and Andes, and at the bottom of the valleys of the Indus and Nile. There is no spot on the earth unknown to the mosquito, yet Mexico declares that it has always remained an exception until three years ago, but now the whole land is covered. Efforts are made to trace the invasion to a load of pineapples sidetracked for a few days at Queretaro. This explanation rises out of popular prejudice against railroads. The mosquito is a problem; it always was a problem. Pass it along: Where did the first mosquito come from?—*St. Louis Globe-Democrat.*

CHINESE QUARRELS.

How the Pig-Tails Act When They Think They Have a Grievance.

Among a population of such unexampled density, where families of great size are crowded together—three or four generations, with all the wives and children under one roof—occasions for quarrel are all pervasive. The sons' wives and children are prolific sources of domestic unpleasantness. Each wife strives to make her husband feel that in the community of property he is the one who is worsted; the elder wife tyrannizes over the younger ones, and the latter rebel. The instinct of the Western with a grievance is to get it redressed straightway; that of the Oriental is, first of all, to let the world at large know that he has a grievance. A Chinaman who has been wronged will go upon the street and roar at the top of his voice. The art of hallooing, as it is called in Chinese, is closely associated with that of reviling, and the Chinese women are such adepts in both as to justify the aphorism that what they have lost in their feet they have gained in their tongues. Much of this abusive language is regarded as a sort of spell or curse. A man who has had the heads removed from his field of millet stands at the entrance of the alley which leads to his dwelling and pours forth volleys of abuse upon the unknown offender. This has a double value—first, as a means of notifying to the public his loss and his consequent fury, thus freeing his mind; and, secondly, as a prophylactic tending to secure him against the repetition of the offense. Women indulge in this practice of "reviling the street" from the flat roofs of the houses, and shriek away for hours at a time until their voices fail. Abuse delivered in this way attracts little or no attention, and one sometimes comes on a man or a woman thus screeching themselves red in the face, with not an auditor in sight. If the day is a hot one, the reviler bawls as long as he (or she) has breath, then proceeds to refresh himself with a season of fanning, and afterwards returns to the attack with renewed fury. A fight in which only two parties are concerned usually resolves itself into mere hair-pulling; the combatants, when separated by their friends, shout back to each other maledictions and defiance. The quarrel between Laban and Jacob, recorded in the thirty-first chapter of Genesis, when the latter stole away from Laban's house, is a "photographically accurate account of the truly Oriental performance which the Chinese call making an uproar."—*North China Herald.*

GOING A-COURTING.

A Glance at Men and Women Before and and After Marriage.

Most boys, when they reach the larger figures of their teens and can feel the first approach of a coming mustache, deem it incumbent upon them to "go to see the girls," and these same girls are equally impressed with the idea that it is their duty to be seen. Both parties instinctively, though perhaps unconsiously, put themselves in a course of deceiving and being deceived. The boy tries to conceal any roughness that may adhere to him, and exercises a studious anxiety to "put the best foot foremost." If he be habitually vulgar or profane of speech, he is careful to keep them from appearing. Should he be easy to give way to anger or addicted to indulge in slanderous or sarcastic speeches, he strives to keep these failings from the knowledge of the girls. In one word, his first purpose in courting is to please, and he is far more solicitouous to appear what he thinks the fair one would have him be than to make known what he really is. He wants to be voted a nice young man. We fear that, in many instances, he cares less about being than about seeming this.

The girls, on the other hand, are equally anxious about how they will seem. They wear the sweetest smiles, and express the most amiable sentiments. They carefully hide it away that they are ever impatient, or fretful, or disposed to give way to any ugly passion—that they are ever perverse in temper or given to slang in speech. Thus the courtship is carried on by each with the determination to put forward whatever will please, and to keep back whatever will displease. Each one goes, more or less, masked, and each produces an impression more or less false. After marriage—if marriage should be the ending of the courtship—the disguises are dropped, and the disillusioning is often very painful. Many a wife finds that he whom, as a beau, she admired for his gentleness and sweetness of disposition, is a coarse tyrant; and many a husband finds that the amiable belle does not always make an amiable wife. But it is no certain proof of hypocrisy that we find persons different from what they once appeared. Change of environments make great changes in people, and circumstances do alter cases.—*Cor. Sunny South.*

—Suspected a Trap.—"Here's an article headed 'Marvelous Escape of a Distinguished Citizen from a Horrible Death,'" said the dutiful daughter, who was reading the morning paper to her invalid father. "'The friends of Mr. J. Alpheus Bramble were shocked on learning a few mornings ago that——'" "Jane," interrupted the irritable parent, "before you read any more of that you will oblige me if you'll look about half way down to the bottom of the article and see what patent medicine it's advertising."—*Chicago Tribune.*

SCOTCH FISHER-FOLK.

Sights and Scenes in a Prosperous Fishing Village of Scotland.

Many fishermen with their bags were on their way to the station, for the fishing season was almost over. So they said. But when one thousand boats came in, and twenty thousand fisher-folk were that day in Fraserburgh, to us it looked little like the end. In all this busy place we heard no English. Only Gaelic was spoken, as if we were once more in the Western Islands.

It was the same in the streets. The day's work in the curing-houses was just about to begin. Girls and women in groups of threes and fours were walking toward them. In the morning light we could see that the greater number were young. All were neat and clean, with hair carefully parted and well brushed, little shawls over their shoulders, but nothing on their heads. They carried their working clothes under their arms, and kept knitting as they walked. Like the men, they all talked Gaelic.

When they got to work we found that those strange stuffs which had glistened in the torchlight were aprons and bibs smeared with scales and slime, that the white head-dresses were worn only for cleanliness, that the shining masses at their feet were but piles of herring. I have never seen women work so hard or so fast. Their arms, as they seized the fish, gutted them, threw them in the buckets, moved with the regularity and the speed of machines. Indeed, there could not be a busier place than Fraserburgh. All day long the boats kept coming in, nets were emptied, fish carted away. The harbor, the streets, the fields beyond where nets were taken to dry, the curing-houses, were alike scenes of industry. If the women put down their knives it was only to take up their knitting. And yet these men and women, working incessantly by day and night, were almost all Western-Islanders, the people who, we are told, are so slovenly and so lazy! No one who comes with them to the east coast for the fishing season will ever again believe in the oft-repeated lies about their idleness.—*Elizabeth Robins Pennell in Harper's Magazine.*

NEEDLESS NOISES.

A Strain on the Nervous System Which Often Has Serious Results.

One of the injurious influences of a city life is the nervous derangement often caused by the incessant noises that a lax or cowardly municipal government tolerates, through ignorance of the effect or fear of offense to certain voters. It is a mischief operating so subtly and imperceptibly that it is not commonly suspected till its worst effects have become almost immovably fixed. It is doubtful if any nervous system ever becomes so used to this incessant strain upon it as to feel no harm, though it is a rare case that the victim of some undefined disorder, nothing serious, nothing certainly traceable to any specific cause, nothing to require medical treatment, and yet withal a condition different from that of a hearty country life, recognizes it as the never-ending, constantly-changing uproar of a city. The yelling of steam whistles, the hiss of steam pipes, the rattle and clash of wheels on stone covered streets, the clangor of bells, the howling of hucksters, keep up a condition in which a healthy nervous system of natural strength and sensitiveness is impossible. And there is not one of these agencies that is not suppressed more or less completely in most of the great cities of the world. In Berlin heavy wagons are not allowed on certain streets. In Paris any cart load of rattling material must be fastened till it can't rattle. Munich allows no bells on street cars. In Philadelphia church bells have been held a nuisance in certain neighborhoods by judicial ruling. Steam whistles are forbidden in nearly all the larger cities of this country and Europe. Milkmen and bakers are not allowed to use bells or horns in some cities; In others the abominable yelling and howling of hucksters, for which there is no excuse at all, are prohibited. Our city might make a trial of one or two cases as an experiment.—*Indianapolis News.*

The Latest in Tea-Gowns.

Cloth is used for new tea-gowns, and pale shade of green are the favorite choice, with white or Suede cloth for the fronts. The edges of the cloth are cut in deep leaves and pinked. The mediæval tea-gowns, with corset waist and full skirt of six or seven breadths, are beautifully made of bengaline, or of soft brocades in pale blue, old-rose, yellow and Russian green, with great puffed sleeves of white lace, and showing a petticoat of white lace where the skirt is lifted on the left side. Rose-colored or Suede camel's-hair gowns are trimmed with black moire ribbons, and have large flower-like pieces of black lisse underlet in the skirts and edged with purling. Round waists gathered behind and belted in front are newer than the pointed back and flowing front formerly used for these gowns. The full sleeves are made in most varied designs, but the mutton-leg sleeves pushed up full about the arm-hole are most liked.—*Harper's Bazar.*

Nothing Delicate About Him.

Crackelsby (who is lunching his out-of-town Uncle at Delmonico's)—Bring little neck clams for two, waitah.

Uncle Peleg—Hold on, Lemuel, 'f it's all th' same to you, I'll take big neck oysters. I'm hungry ez a bear.—*Time.*

SOLDIERS' COURAGE.

Lord Wolsely Discusses the Various Kinds and Their Effectiveness.

In his famous *Fortnightly* article on courage, Lord Wolsely discusses a subject which he may reasonably be supposed to understand as well as any man alive; and he does so in a manner that is not only interesting, but amusing and humorous as well. Courage, whether active or passive, may be divided into three kinds—that which arises from pure insensibility to danger; the inability to feel fear, which is characteristic of men like Nelson; that which comes of pure ignorance, such as may often be seen in young soldiers, and was observed among the raw British levies at Quartre Bras; and lastly, that which springs from a sense of duty or a sense of honor overcoming and suppressing the emotion which the individual feels at the proximity of death, and enabling him to face it with as much coolness as one who does not feel it at all. The difference between the two is constitutional, and many would say that the last kind of courage—the courage of the man who knows and appreciates the peril and would shrink from it did not higher motives urge him forward—is in realty the more worthy of respect. But if we can trust Lord Wolseley, it is not this which makes soldiers mount the deadly breach or charge up to a battery of guns with light hearts and desperate determination. It is the fiery and impetuous leader who has never known fear, or the coolly impassive one who moves about among a shower of bullets, regarding them no more than if they were snow-flakes, who excites the enthusiasm of his men. According to Lord Wolseley, these different kinds of courage manifest themselves in different manners, and the soldier knows by instinct which of the two he is in presence of. Between the officer who conquers fear and the officer who has none to conquer he never makes a mistake. He will respect the first; but the second is the one in whose company he will rush on death.

We can easily understand that the courage of a martyr at the stake, or the splendid calmness of the soldiers who went down in their ranks with the burning vessel, would have less effect for active purposes than the example of one who rushes sword in hand on overwhelming numbers, or seems to court death by exposing himself recklessly to fire. This was what Nelson did; and Lord Wolseley gives some interesting examples of this kind of daring from his own observation. He mentions Captain Sir William Peel, of the Royal navy, as a singular example of cool, deliberate intrepidity. During the bombardment of Sebastopol he always walked just behind his battery, where he was more exposed to fire than the men working the guns, and where his presence made it impossible for any of the gunners to flinch. He was always courteous. But under a heavy fire he became more than usually urbane and gentle. This the men always noticed. The hotter the fire, they used to say, the more "polite" he became. As an instance of downright insensibility to danger, Lord Wolseley mentions Sir Gerald Graham, who, when relieved from duty in the trenches, used to walk straight back to camp, exposed to the Russian bullets for many hundred yards, because it was the shortest cut and he was too lazy to go round where he would have been under shelter.—*London Standard.*

Inventor of the Bell Punch.

"The oddest case of an inventor of whom I have a personal knowledge," said George L. Chapin, "came to me in 1868 or 1869 with the model of a bell bunch. It was one of the original base patents, and I saw good promise in it for him. I pointed this out to him and advised him strongly to wait for a good offer, but he sold the invention to a company in Buffalo for $300, whereas it was worth thousands of dollars, and the company at no time would have sold it for less than $50,000. They made a big fortune out of it. Afterward, when they found that their patent was not quite so valuable as might be, they made him reissue the patent and paid him $50 for it. Even for this reissue he might have got several thousand dollars, perhaps more. And he did all this against my advice. He was the queerest man I ever knew. He had made a fortune in Canada with wells, but had taken to inventions as a profession, and had spent all his fortune and time at it. He has made more inventions in his life than any man out West, and all of them have been good and serviceable. He was continually in need of money, and when he had perfected an invention he would sell it outright for just enough to meet his immediate needs. But the curious thing about it is that he has never invented any thing worth much since the bell punch. He missed the opportunity of his life then, and is now a mere day laborer right here in Chicago."—*Chicago Herald.*

A Difficult Commission.

Lady—You know, sir, I wish my portrait to be a total surprise for my husband.

Artist—Yes, madame, I understand.

Lady—And you will try not to have too strong a likeness, as I would not wish him to recognize it at the first glance.—*Life.*

—German savants have been discussing the duration of dreams. They conclude that, while most dreams are momentary, they may be extended sometimes to the length of a minute.

COUNT THE COST.

Advice for Mechanics, Which Certainly Is Worth Following.

Every thing, no matter how small, has some value. Every thing used about any shop, mill or place of business costs something, and no matter how small it is, or how little its cost, it should in some way be accounted for. The old Scotch saying, "mony a mickle makes a muckell" should always be kept in sight. Every thing purchased should be thoroughly weighed and its value noted. The price paid for a thing is not an exponent of its value. Its value consists in the return it brings. A book, paper, machine or appliance is of no kind of value to its owner unless it gives him something in return, or renders an equivalent for time or money expended, and we should "count the cost." A thing we can not use, and consequently is of no value to us, is dear at any price; we should "count the cost" before buying.

Before buying any machine we should see it, or its duplicate, working under all the conditions the machine is calculated to work under, and in no case buy a second quality of tool, or one that will do a small amount or an inferior quality of work. The cost should be counted, and if more is paid for it than it will return to us in work performed, it is a dear purchase.

The cost should be counted in buying belting. A poor belt is costly at any price, for it never runs well or pulls well, and costs more in time to lace and relace and patch than two or three good belts in the end. Lacing should be carefully selected. If you trust to the dealer to select hides of lacing for you, he always has a few hides of poor quality, and it is to his interest to get rid of this poor stock, and if you leave the selection to him, you will probably get one of these poor hides, therefore it is best always, before cutting them up, to see how much it will cost you to use it.

The first cost of any thing is a small item, and not a single thing should be bought because it can be bought "for a mere song." What will it cost to use or run it, comparatively? If it is a machine, count the cost of oil, belting, time spent in repairs, and amount and quality of work done in a given time, and compare it with another machine doing the same kind of work.

In buying files there should be a close discrimination, for files are curious things to buy. There are thousands of them so poor that a junk dealer would not run the risk of stealing them, for the cost of carrying them to his pile of old iron would be more than they were worth. The only way to get good files is to count the cost of using, and get hold of some firm who always furnish a first-class file, and stick to them. Don't ever buy, or beg, or even borrow, an acid re-cut file.

Count the cost in hiring labor, and be careful in selecting it. A man may be a good man for somebody, but not for you. A man to be of value in any particular business must be adapted to it, and be able to do it with ease and dispatch. Simply because he is a man is no sign that he will be of value to you as an employe. Count the cost of every thing in the sense of what value it will be to you in using.—*Wood Worker.*

ELECTRICITY IN JAPAN.

A Possibility That We Will Soon Have Oriental Electrical Experts.

Although many similar societies have been formed of late, both in the United States and in England, yet the pleasing information is just heard that an institution, having for its object the furtherance of electrical research, has been inaugurated in Japan, with a membership of nearly eight hundred.

"This evidence," said a well-known electrician, "would indicate that Japan has gone much further in electrical study and research than any one in this city would have supposed. It is furthermore stated that the admission to the society is based on the most liberal rules and regulations, that would put to shame some of our own institutions whose narrow-mindedness is reflected in the cast-iron rules which preclude the possibility of only a favored few being admitted. At the present time the ranks of our American engineers are largely and valuably reinforced from England, France and Germany, but we may expect before long that Japan will be supplying us with experts for our old and younger companies in every branch of work. It is to be hoped that this new Japanese society will be growingly useful and prosper."—*N. Y. Mail and Express.*

Neatness Better Than Beauty.

A woman may be handsome or remarkably attractive in various ways, but if she is not personally neat she can not hope to win admiration. Fine clothes will not conceal the slattern. A young woman with her hair always in disorder and her clothes hanging about her as if suspended by a prop, is always repulsive. Slattern is written on her person from the crown of her head to the toes of her feet, and if she wins a husband he will, in all probability, turn out either to be an idle fool or a drunken ruffian. The bringing up of daughters to be able to work, act and talk like honest, sensible young women is the especial task of all mothers, and in the industrial ranks there is imposed also the prime obligations of learning how to respect household work for its own sake, and the comfort and happiness it will bring in the future. Housework is a drudgery, but it must be done by somebody, and had better be well than ill done.—*Sunny South.*

THE VALUE OF TACT.

A Most Important Factor in the Attainment of Popularity.

A story is told of a dignitary of the church who somewhat astonished an audience of young clergymen by taking the words "Rub Lightly" as the text of an address, in which he impressed upon his hearers the importance of tact in dealing with their lay brethren. Speaking generally, it may be said that in every walk of life delicate treatment and gentle handling are often the secret of success in dealing both with persons and things. The great gift of tact, so difficult to define, so easy to appreciate and admire, is nothing more than the art which enables its possessors to "rub lightly" in all the relations of life. The instinct which helps us to undersand characters widely different, which gives us a quick perception of the susceptibilities and peculiarities of others, is essential to all who aspire to deal successfully with their fellow-men.

Even in the most commonplace duties of everyday life the art of rubbing lightly will often enable us to overcome difficulties and obstacles which have resisted all rougher methods. The servant who posses a "light hand" is indeed "a treasure" in the eyes of her mistress, and will succeed in many little domestic duties where clumsy fingers would utterly fail.

Though of most importance, and seen in its highest form in the world at large, there is ample scope for the exercise of the narrower circle of home-life and social gatherings. And here it may be observed that this natural instinct and insight into character, connected as it is with the finer feelings of our nature, is seen more commonly and in a higher degree among women than among men. Who does not admire the ready tact which enables a popular hostess to make a mixed party "go off," or, in other words, to harmonize the somewhat discordant elements of a miscellaneous assemblage. "What can equal woman's tact," says Oliver Wendell Holmes; "her delicacy, her subtlety of apprehension, her quickness to feel the changes of temperature, as the warm and cool currents of talk blow by turns?"

If we consider the importance of tact in the wider relations of life, we shall find that those who can rub lightly achieve a large measure of success in dealing with others.

Perhaps the value of tact will be most readily and most commonly recognized in the region of diplomacy. And while it may be said to attain its highest development in the successful ambassador who carries on negotiations of the most delicate nature, on which the issues of peace or war may depend, it is of almost equal importance to the great party leader, the popular bishop, the eminent physician, the successful head-master. One and all of these in their different spheres carry out more or less unconsciously the principle of rubbing lightly in their intercourse with their fellow-men. If it be too much to say that "tact is success" in life, it may at any rate be safely asserted that to those whose work consists mainly in managing or influencing others, the art of rubbing lightly is a most important factor in the attainment of popularity.—*Chambers' Journal.*

JEFFERSON'S WORK.

He May Safely Be Called the Author of the Declaration of Independence.

The struggle of the American colonies against Great Britain was begun without any general idea of pushing the matter to a separation from the mother country. Though the idea of forming an independent government was favored in New England, it was so distasteful to the other colonies that Congress formally disavowed it, July 6, 1775. However, the idea gained ground largely during the following year, and no one thing aided more in its spread than the publication of Thomas Paine's pamphlet, "Common Sense." This struck the keynote of the situation by advocating, with forcible logic, an assertion of independence on the part of the colonies, and the formation of a republican government. The Pennsylvania Legislature so well appreciated the value of Paine's pamphlet that it gave him a grant of $2,500 in consideration of it. As Jefferson was a reader and an admirer of Paine, it is possible that he received more or less inspiration from the pages of "Common Sense," for there is no question as to Jefferson's authorship of the immortal Declaration. In May, 1776, the Virginia convention instructed its delegates to propose a resolution for independence. This was done June 7 by Richard Henry Lee, and after some debate the resolution was referred, June 10, to a committee of five, which was empowered to draw up a declaration. This committee consisted of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston. Jefferson was no orator, but he was known to be an able writer, and he was appointrd to make the draft. When submitted to the others his draft was accepted, with a few changes, and was then laid before Congress (July 3), which body, after some debate, passed it without alteration. The changes made by the other members of the committee were omissions rather than alterations, so that the whole document, as we have it now, contains hardly any words which were not those of Jefferson. There is every reason to believe that the words, "Author of the Declaration of Independence," placed on Jefferson's tomb at his own request, assert a just claim.—*Chicago Inter-Ocean.*

INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL.

SATURDAY JANUARY 26 1889

One of the most certain prognostications of the future prosperity of Owens Valley is the fact that its possibilities are being discussed by capitalists in large cities; that the value of its future trade is deemed worthy of serious consideration. In bringing the Valley to the notice of the home-seeking public, and to those who have money to invest, many serious hindrances are met with. To reach here it is necessary to make a tedious journey over a sandy desert, which to a casual observer might much resemble the general appearance of the Valley itself, when it is not duly considered that Owens Valley has abundant water to irrigate every foot of land if properly used and husbanded, while the Nevada desert has no water at all after Walker Lake is passed. Occasionally such a man will visit here. He arrives at night and departs in the morning without having visited a single ranch, seen any of the many improvements, or studied at all the great natural resources of the country. He very naturally returns to his friends with a most damaging report. He says he has been all through the country and has seen nothing to commend it. How true it is that there are none so blind as those who will not see. The country at present is so is isolated that many hesitate to come here unless they are satisfied of being able to remain. They hear this report and at once seek other places that are more accessible though not half so profitable. On the other hand it is a well-known fact that every man who has traveled through the country at his leisure and studied it thoroughly will become every day more imbued with the idea that it cannot fail to have a great future. Another drawback lies in this fact. Most of the desert land locations, where capital is required to get the water upon the land, have been made by men who are non-residents of the county. Men who have not a dollar at stake here except the pittance of 25 cents per acre that was paid upon locating. The actual settlers are nearly all poor men, who came here without a dollar, and by the sweat of their brow have made a living and are acquiring for themselves comfortable homes. For three years past a number of poor men have been at work on a ditch near Independence. They had very little money but lots of pluck and have succeeded in getting out sufficient water for their land from the river. Several thousand acres of as fine land as lies out of doors has been located by San Francisco parties below the line of the ditch and about seven miles from the present terminus. They have not put one dollar into the work; and because the men who own the ditch ask a reasonable sum for the labor expended and risk incurred they are dubbed "moss-backs," "land-grabbers," "speculators," "a detriment to the country;" because, forsooth, they do not labor gratis for the 25 cent an acre men, who own land which an outlay of $3.50 per acre, price of land included, would bring an immediate sale at $15.00 per acre, and in a few years of $50 per acre. This is true of other canals in the Valley. If these canals are a detriment to the country we fail to see it. Land from which no income was derived will be made to pay large returns; taxable property will spring up, population will increase, and while the ditches are being constructed ready is being put in circulation. Our people are accused of idleness and want of enterprise but it must be remembered that we are comparatively poor and that when labor alone is capital it requires a long time to accomplish great ends. There is one thing certain: no stranger can visit Owens Valley and complain of want of attention or civility. Carriages are furnished to take them wherever they wish to go; the people are hospitable and every information is furnished that is within our power to give. We have no hesitation in saying that any one who has given or will give the Valley an unprejudiced inspection will be highly impressed with its future.

Harqua Hala.

The Arizona liar is the boss prevaricator of the world. Prospectors and others returning from the new Harqua Hala gold camp say the reports of rich mineral found there are greatly exaggerated, and some even claim it to be a fraud. There is great suffering among those now there. Most of the gold found was in pockets on the surface, and as the depth of the claims increases ore does not average more than $20 per ton.—*Enterprise.*

THE WIFE.

In youth, he wrought, with eyes ablur,
Lorn faced and long of hair—
In youth—in youth, he painted her
A sister of the air—
Could clasp her not, but felt the stir
Of pinions everywhere.

She lured his gaze, in braver days
And tranced him siren wise;
And he did paint her, through a haze
Of sullen paradise,
With scars of kisses on her face,
And embers in her eyes,

And now—nor dream, nor wild conceit
Though faltering, as before—
Through tears he paints her, as is meet,
Tracing the dear face o'er
With lilied patience meek and sweet
As mother Mary wore.
—James Whitcomb Riley in Belford's Magazine.

LOVE AND SCIENCE.

She turned from the window with a queer little exclamation of mingled vexation and disappointment. A half sigh rose to her lips, and, with a slight contraction of her brow that was in reality indicative of impatience, she drew the curtain across the large square pane and walked abstractedly away.

Agatha West was peculiar in some ways. For a year and a half she had been on intimate terms with John Roswick, and in all that time never once had he been in her presence without feeling a deep sense of his own inferiority and dependence. Not that she was strong minded. No one would more quickly resent such an insinuation than she. True, she wore rimless eyeglasses, and at times affected a severe simplicity of dress that was decidedly becoming to her plump, brunette beauty. Nor was Roswick an effeminate creature. He was, however, a man that easily lost confidence in himself when in the presence of the opposite sex, and at such times was liable to become as awkward and helpless as a badly jointed automaton endowed with only a monosyllabic power of speech.

Roswick was a man of considerable wealth, and possessed a strong love for mechanics. His life, for the past ten years, had been spent in an elaborate workshop fitted out in the upper part of his house on Dousey street, where, day after day and night after night, he hammered and filed and filed and hammered at some product of his handiwork. His great hobby was electricity, and with the advent of the telephone, electric lighting and kindred inventions he became so infatuated with his chosen work that he scarcely took time to eat and sleep.

It was through this devotion to his studies that he became acquainted with Agatha West. Just how this was brought about need not be detailed here, but suffice it to say that before the summer was gone his work began to be neglected, and his affections were, in part, transferred to the more complex and hopelessly confusing study of womankind.

Agatha was consumed by mighty aspirations when she left Wellesley. Her horizon was boundless. In the valedictory, which it was her honor to deliver, she advanced the customary platitudes regarding "the dawning life, adown whose shadowy vista we are now about to make tracks," or words to similar purport. In common with the multitude of ladies who each year blossom simultaneously with the June roses into "the stern realities of life," as they are pleased to term it, Agatha was filled with the vague idea that she had a "mission;" that henceforth this old world, largely through her influence, was to run on different principles. With each succeeding year, however, this inner consciousness slowly died the death of inanition, until now, at twenty-six, little remained but a mild interest in the arts and sciences fostered by her intimate associations with John Roswick.

To tell the truth, that evening was the third consecutive time that Roswick had called on Miss West with the premeditated intention of declaring his affection and asking her to be his wife. For the third time he had failed ignominiously. How he had managed finally to bid her good night he had not the remotest idea. A dozen times during the evening had the all important declaration of love risen to his lips, and a dozen times had that dreadful choking embarrassment effectually silenced his intended utterance. On commonplace topics he had managed to acquit himself fairly well, but with an air of abstraction that necessitated frequent apologies to the object of his blind worship.

This, then, was the reason Agatha watched his retreating form with an air of vexation, and left the shadow of the curtain with something dangerously near a frown on her mobile features. His infatuation was no secret to her. To what woman is her admirer's mind as a sealed book? And the feeling she entertained toward him, long ago self acknowledged, only tended to make her less tolerant of his prolonged silence.

To say that John Boswick was discouraged and vexed with himself would be but a mild statement of facts. On his homeward walk that night he raged inwardly every step of the way, and it was not until a week later that his mental barometer had risen to its normal altitude. The Tuesday evening following his last doubly emphasized fiasco Roswick, secure in the privacy of his own inner workshop, dropped his tools for a moment and gave himself up to profound meditation.

"I am a fool, and I know it!" he exclaimed aloud, giving the work bench a vigorous thump as he set down a curious looking machine upon which he had been at work. "What's more, Agatha knows it!" he continued. He called her Agatha glibly enough when unembarrassed by her presence. Indeed, this habit of thinking aloud had become, through circumstances, a fixed one, and, as on several previous occasions, he recounted the events of their last meeting.

"I can't stand this any longer!" he exclaimed, suddenly. "I'll see her to-morrow night and have it all settled in some way. This foolishness must be stopped. The idea! Afraid of a woman! And I know—at least, I'm quite sure—she—she likes me. Let me see," he continued, musingly. "How can I introduce the subject? I know!" he ejaculated, with sudden inspiration. "I'll ask her if she thinks there is any danger of sewer gas in my new row of flats! That will lead up to the subject nicely." And then Roswick's mind skipped gayly from one point to another as he formulated in his own way the conversation leading up to the all important question. He even went so far as to act it all out. How he should stand at such a moment, with bent head, waiting for her reply. He would go on thus and thus until, having in his imagination heard all she said, as he paused at different times, he would eventually throw one arm around her trim waist as he made the one great plunge. In his enthusiasm he threw his left arm around a convenient post and beamed fondly on a last month's calendar. This aroused him to a sense of his surroundings and he was silent for a few moments.

A low tapping at the door of his workshop aroused him. He listened somewhat impatiently to the soft tones of his sister's well modulated voice.

"Don't let me disturb you, John," she was saying. "I merely wanted to tell you we have decided that the children's party will be given on our own lawn."

"Well," said John, rather sharply, "it must come off next week or I may change my mind altogether. That's straight."

"Very well; that will suit us perfectly."

Roswick followed his sister's retreating footsteps down the long hall almost immediately.

The next evening he was unexpectedly called to the upper end of the city, and it was not until the following night that he once more found himself tete-a-tete with Agatha. Outwardly he was quite self possessed, but alas! the trepidation of his heart! It thumped away at such a rate that his power of speech seemed in danger of forsaking him at any moment.

Agatha, tantalizingly collected, sat waving a huge feather fan with lazy grace, smiling softly in her companion's restless eyes. "You were saying," she began, interrogatively, "that you were a great admirer of Ruskin?"

"Yes—that is, his 'Stones of Venice,' you know. Such works interest me greatly. By the way," and the very thought that he was about to begin the consummation of his plan caused his tongue to halt; "by the way, I want—I mean I would like to know more fully your theory in regard to sewer gas—how to combat it, you know. I missed your last paper in The Architect's Assistant on the subject." This was a long speech for John, and he was a trifle flushed as he paused.

"It is very kind in you to ask my opinion," Agatha said, sweetly, "but I prefer to let you read it for yourself. I will send the journal to you to-morrow."

Although Agatha was secretly proud of the fact that her dabbling in such topics had attracted some attention, she did not care to discuss these problems at this time. It was, therefore, with a touch of cool formality that she added: "I was not aware that you were interested in architecture, Mr. Roswick."

"Oh, but I am!" he exclaimed, enthusiastically. "I have just let the contracts for a row of flats in Acton square."

"Indeed? What a charming location!"

"I'm glad you like it."

This was spoken before he realized it. Now was his chance. The cognizance of the critical moment at once paralyzed his power of speech. Agatha, with eyes modestly downcast, was toying aimlessly with the various articles on the small table at her left hand, and seemed to offer as much encouragement as any man could ask.

"Miss West," he began, nervously. Agatha did not look up. He could go no further. His speech absolutely failed him. It was with an inarticulate gasp that he heard what seemed to be his own voice; but oh, so much more clear and confident.

"Miss West—Agatha," said the voice, "pardon me if I seem too bold, but I have something of the utmost importance to say to you."

"Yes?" said Agatha, softly.

"You must know—it can be no secret to you—that I have long esteemed you as more than a friend."

"Why, Mr. Roswick!" It was a very gentle exclamation, ingeniously indicative of mild surprise.

John Roswick was, by this time, dumb with astonishment. Fortunately Agatha's eyes were averted. He again tried to speak, when the voice was heard once more.

"I wanted to tell you this long ago," it said, "and beg you to accept of my love. For I do love you better than anything on earth. You are not angry with me?"

"No," very softly.

John's expression was something wonderful. His lips moved, but no sound came forth. Again the voice:

"Dear Agatha," it continued (who could resist such an appeal?), "be my wife! Make me forever happy"——

There was an interruption. Miss West now raised her head for the first time, flushing all rosy red, like the early summer dawn. "O, John!" she exclaimed, rapturously. Nothing more.

Then she threw her arms around his neck most gracefully—she had studied Delsarte—and whispered in his ear: "I think—I know I love you, John."

Roswick, to his credit be it said, improved the opportunity and kissed her then and there upon her very charming mouth.

From the center of the table came a faint, whirring sound. Roswick's puzzled brow cleared as a thought flashed across his mind. He turned pale when, with a sudden flirt of the newspaper, he saw the photograph he had sent Agatha the day before, and realized that his auspicions were confirmed. It was the one he had been experimenting upon in his workshop two nights previously, and again the mechanism had been inadvertently set going.

Agatha West, resting in his embrace, was almost too happy for speech. She sighed gently. "And do you really want me to marry you?" very tremulously.

"Well," said the voice, rather sharply, "it must come off next week or I may change my mind altogether. That's straight!"

"Oh, John!" exclaimed the young woman. "How impetuous you are! But I"—shyly taking the lapels of his coat in either hand—"I think I can get ready by that time."—W. C. Fulton in Chicago Herald.

A Method of Preserving Food.

A method of preserving food, particularly meat, without cans, recently patented, consists essentially in inclosing the meat or other article in an expansible wrapper, such as animal membrane, and subjecting it to a sterilizing steam heat long enough to kill all germs. It is then immersed in vaseline, which forms a permanent coating on hardening, and finally inclosed in a protective wrapper, such as gauze coated with plaster of Paris, or the coating of plaster of Paris may be applied directly on the expansible envelope, and the article then placed in a bath of vaseline or other plastic substance, the package thus prepared being wrapped in paper or tinfoil. This method of preservation necessarily avoids any contamination of the articles by metals or acids, and will enable housekeepers to keep all delicacies, such as game, tender parts of meat, etc.—Scientific American.

An Appropriate Liar.

A photographer of Waterloo, Mich., reports that he found in Tama county, after the recent hail storm and cyclone, a hail stone eighteen inches long. It had been lying in the underbrush, too, and had lost considerably in size by melting. The photographer is needed in New York. The campaign managers are looking for a liar about his depth.—Chicago Times.

A Theater Goer's Suggestion

An English woman is responsible for the suggestion that along with other improvements to theater seats, there be an arrangement by which they can be sunk through a trap in the floor into a saloon below, so that men can go out between the acts and see a man without treading on the toes of all the women near them. —New York Sun.

New Type Setting Machines.

Several inventors are at work upon machines which cast and set type at the same time, each letter being cast when a key is pressed. The principal trouble with this class of machines, and with all other type setting machines, is that it is difficult to "justify"—that is, to fill out the lines properly at the right hand end and space properly between the words.—St. Louis Republic.

China Is Waking Up.

The British consul at Hankow says that China, though still spoken of as a country of stagnation and stereotyped ideas, is really only a little behind its pushing neighbor, Japan, in its haste to get rid of ancient prejudices.—Chicago Herald.

CRYSTALLIZATION OF FRUITS.

The Method as Explained to California's Board of Horticulture.

The process of preserving fruits in a crystallized or glaced form is attracting considerable attention at the present time. This process, though comparatively new in California, has been extensively operated in Southwestern France for years, the United States having been heavy importers, paying fancy prices for the product. The process is quite simple. The theory is to extract the juice from the fruit and replace it with sugar syrup, which, upon hardening, preserves the fruit from decay and at the same time retains the natural shape of the fruit. All kinds of fruit are capable of being preserved under this process. Though the method is very simple, there is a certain skill required that is only acquired by practice. The several successive steps in the process are about as follows: First, the same care in selecting and grading the fruit should be taken as for canning; that is, the fruit should be all of one size and as near the same ripeness as possible. The exact degree of ripeness is of great importance, which is at that stage when fruit is best for canning. Peaches, pears, etc., are pared and cut in halves as for canning; plums, cherries, etc., are pitted.

The fruit having thus been carefully prepared is then put in a basket or bucket with a perforated bottom and immersed in boiling water. The object of this is to dilute and extract the juice of the fruit. The length of time the fruit is immersed is the most important part of the process. If left too long it is overcooked and becomes soft; if not immersed long enough, the juice is not sufficiently extracted, which prevents a perfect absorption of the sugar. After the fruit has been thus scalded and allowed to cool, it can again be assorted as to softness. The next step is the sirup, which is made of white sugar and water. The softer the fruit, the heavier the sirup required. Ordinarily, about 70 degs. Balling's saccharometer is about the proper weight for the sirup. The fruit is then placed in earthen pans and covered with sirup, where it is left to remain about a week. The sugar enters the fruit and displaces what juice remained after the scalding process.

The fruit now requires careful watching, as fermentation will soon take place, and when this has reached a certain stage the fruit and sirup is heated to a boiling degree, which checks the fermentation. This heating process should be repeated as often as necessary for about six weeks. The fruit is then taken out of the sirup and washed in clean water, and is then ready to be either glaced or crystallized, as the operator may wish. If glaced, the fruit is dipped in thick sugar sirup and left to harden quickly in open air. If it is to be crystallized, dip in the same kind of sirup, but is made to cool and harden slowly, thus causing the sugar which covers the fruit to crystallize. The fruit is now ready for boxing and shipping. Fruit thus prepared will keep in any climate and stand transportation.—J. J. Pratt.

DESERT LAND FINAL PROOF.

D. E. No. 250.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL.,
December 18, 1888.

Notice is hereby given that Augustus C. Stevens, of Lone Pine, Inyo county, California, has filed notice of intention to make proof on his desert land claim No. 250, for the N E ¼ of S E ¼, E ½ of N E ¼ of Sec 2, N W ¼, W ½ of N E ¼, W ½ of S E ¼, S W ¼ of Sec 1, Tp 14 S, R 35 E, M D M, before the Register and Receiver of this office at Independence, on Tuesday, the 29th day of January, 1889.

He names the following witnesses to prove the complete irrigation and reclamation of said land: John Lucas, James R. Moffett, Allen Kenyon and Joseph V. Skinner, all of Lone Pine, Inyo County, California.

CERTIFICATE OF CO PARTNERSHIP.

STATE OF CALIFORNIA, }
County of Inyo. }

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, under the firm name and style of Thomas & Hill, that the full names of all the members of such partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

In witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA, }
County of Inyo. }

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex-officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill, known to me to be the same persons described in whose names are subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL] P. H. MACK,
County Clerk and ex-officio Clerk of the Superior Court.
By A. K. EGGLEY, Deputy.
[ENDORSED.]
Filed November 28, 1888.
P. H. MACK, County Clerk.

Working Asses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time, or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5.00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & CO., Portland, Maine.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 10 cents for our 176 page pamphlet. Address, GEO. P. ROWELL & CO'S NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work; either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. GRAND OUTFIT FREE. Address TRUE & Co., Augusta, Maine.

FREE $85 solid GOLD WATCH Sold for $200 until lately. Best $85 watch in the world. Perfect time keeper. Warranted. Heavy Solid Gold Hunting Cases. Elegant and magnificent. Both ladies and gentlemen with works and cases of equal value. ONE PERSON in each locality can secure one FREE. How is this possible? We answer—we want one person in each locality, to keep in their homes, and show to those who call, a complete line of our valuable and very useful HOUSEHOLD SAMPLES. These samples, as well as the watch, we send free, and after you have kept them in your home for 2 months and shown them to those who may have called, they become your own property. It is possible to make this great offer, sending the SOLID GOLD watch and COSTLY samples free, as the showing of the samples in any locality, always results in a large trade for us, after our samples have been in a locality for a month or two we usually get from $1000 to $2000 in trade from the surrounding country. This, the most wonderful offer ever known, is made in order that our samples may be placed at once where they can be seen, all over America. Write at once, and make sure of the chance. Reader it will be hardly any trouble for you to show the samples to those who may call at your home and your reward will be most satisfactory. A postal card on which to write us costs but 1 cent and after you know all, if you do not care to go further, why no harm is done. But if you do, send your address at once, you can secure FREE one of the best solid gold watches in the world and our large line of COSTLY SAMPLES. We pay all express, freight, etc. Address GEO. INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, JANUARY 26 1889

Manuel Diaz was up from Lone Pine last Monday.

Affectation is a greater enemy to the face than small-pox.

Mr. W. H. Russell, of Benton, was in town this week.

Pat Key, the irrepressible, has been in town several days.

Mr. and Mrs. Moffett, of Georges Creek, are visiting at Independence.

Mr. and Mrs. H. J. Robinson, of Georges Creek, were in town on Thursday.

The light of friendship is the light of phosphorus—seen plainest when all around is dark.—*Crowell.*

Stephen Decker has set out six hundred fruit trees, mostly apple, on his ranch at Lone Pine.

New Mexico is actively at work with the preliminaries incidental to seeking entrance into the Union.

Welles Barnes and Tommy Kehoe have gone to the White Hill to work upon mines they own there.

Mr. and Mrs. A. R. Conklin and Emily Pat arrived home from San Francisco on Friday of last week.

Fools and sensible men are equally inoccuous. It is in the half-fool and half-wise that the danger lies.—*Goethe.*

Work is being steadily prosecuted on the Eastside canal. About fifteen miles have already been completed.

Considerable land on the line of the Stevens canal will be cleared and cultivated during the coming season.

John Morton, of Keeler, has been visiting at Lone Pine. He says he came up to see a horse. Wonder if he did?

The Sutro tunnel has been sold under a decree of foreclosure for $1,325,000. No change will be made in the present management.

John Lucas has leased the butcher shop and business at Lone Pine. He has a lot of fine steers fattening in the corral for that market.

Sheriff Eldred arrested a couple of men on Thursday on the complaint of Miss Thiebeau. They will be taken to Big Pine for trial.

Do not leave a light burning in a room where children are sleeping. It is said by expert physicians to have a most injurious effect on the eyes.

There should be an injunction served on Dave Holland for exterminating our coin producers. Benny may be a good shot but he says those chickens put a "hoodoo" on him.

After paying the January dividend and December operating expenses the Con. Cal. and Va. Company carries a coin surplus of $54,000 to the current month's account.

Bakersfield has a lively appearance, a large number of strangers being there looking after land. The new hotel, costing $125,000, is nearly completed and is a handsome modern structure.

Mr. William Horton arrived at Independence last Tuesday on his way home from Los Angeles. "Uncle Billy" was feeling under the weather and remained in town a day or two to recuperate.

W. K. Miller, of Lone Pine, is feeding quite a number of beef cattle which he intends driving to the Los Angeles market. It is to be heartily wished that he will meet with success in the venture.

Rev. E. McEvers will preach to-morrow—Sunday—at Lone Pine at 10:30 o'clock a. m.; Independence 7 o'clock, evening. Sunday school at the M. E. Church at 11 o'clock a. m.; at Lone Pine, 11:30 a. m.

The case of the People vs. W. T. C. Elliott has been set for hearing at Sacramento at the may term of the Supreme Court. If the case comes back to Inyo for rehearing it will be brought up in the next fiscal year.

A four-horse team belonging to W. K. Miller is hauling marble chips from the quarry at Swansea to the railroad. The marble will be shipped to the Reno reduction works to be used for smelting purposes.

Messrs. Joe Schalten and Pete Meyers came up from Keeler last Tuesday evening on a business visit to the County Clerk and printer. It must have been a sympathetic feeling that made Pete look so happy and smiling.

Mr. Coleman has been appointed upon the following Assembly committees: Silk Culture, Homestead and Land Monopoly, and Mines and Mining interests. We wish to return thanks for a number of reports he has sent.

In the morning, when thou risest, let this thought be present—I am rising to a man's work. Why, then, am I dissatisfied if I am going to do the things for which I exist and for which I came into the world? *Marcus Aurelius.*

Mr. John White, of San Francisco, visited Independendence during the week. He has desert land located under the Eastside canal upon which he intends to prove up and obtain a Government patent. The land is certain to be very valuable within the next few years.

Last Tuesday morning Harry Jiggers started for Mojave with a load of hides. There will be about eight tons of freight consigned to local merchants awaiting him there. He has twelve animals and two wagons. This is a prospect trip and if it shall prove successful Harry will continue hauling. C. S. Swan accompanied him. The round trip will occupy about thirteen days.

A New Venture.

In this issue will be found the card of Mr. S. H. Bigland, who has opened an office in San Francisco for the purpose of dealing in Owens Valley lands. Mr. Bigland has been here for more than a week past, traveling over the county familiarizing himself with every detail. He is a courteous, affable gentleman, well informed, whom it is a pleasure to meet. His aim is to bring the Valley into that prominence in San Francisco which it certainly deserves by devoting himself exclusively to that end.

FAIR.

In a recent article headed "Fair and Unfair" the *Index* makes a malicious attack upon the Fair Directors. The men are old citizens of the county and too well known to make any explanation necessary; however a statement of facts is deemed advisable. The attitude assumed by Craig toward the Fair management has been that of little yelping cur, continually snapping at the heels of those who most desire to promote the good of the country. As long as he confined himself to yelping no notice was taken of him. It is only when such miserable creatures presume to bite that an application of the lash is resorted to. As result, like other mongrels, the infliction will doubtless cause howlings and revilings for some time to come, to which, it is needless to say, no attention will be paid. The statement is made that the State appropriation of $2,000 failed to meet all demands: Not only is this true, but after that sum was expended Messrs. Rhine, Mairs, Conklin, Shepherd, Gorman and Mulholland raised money on their personal security to meet demands over and above that sum, for which receipted bills examined and approved by the Board of Directors attests. In regard to printing, the proposition was made to the President of the Association, who is also a member of the printing committee, to advertise for a stated sum. The President informed him that he would not agree to pay said sum, but if he saw fit to insert an advertisement he could depend upon an equitable settlement of the same, which offer was accepted. When claims were being audited by the Board Craig's bill was allowed in the sum of $51 and the Secretary ordered to draw his warrant for the amount, which was done. At that time there was owing to Mr. Mulholland an advertising bill by the Republican Central Committee. On presenting same to Mr. Densmore, the Chairman, that gentleman stated that funds to meet such bills were in the hands of Secretary Craig. A letter from Mr. Hardy, who as Secretary had previously conducted the affairs of the party with ability and rectitude, stated that Craig would settle all bills. Upon presenting the bill for payment Craig stated that he had no funds. An investigation was at once instigated by prominent Republicans and as the result, to prevent a disgraceful exposé on the eve of election Mr. Mulholland informed Craig that unless money to meet the bill was forthcoming he would publish the affair, and in the mean time would withhold the fair warrant as security. To this Craig consented and finally secured money to pay the bill. By his own confession his credit was extremely slight. He says that he was in pressing need of money (which we don't doubt at all, since he is addicted to the seductive wiles of draw-poker and is said to be a soft snap), and tried for two days to raise a pitiful sum upon the best of security, the fair warrant, which he states was paid in full four weeks later. And in this connection wishes to pose as a martyr and hold up as an usurer and unscrupulous person one of the oldest and best known citizens of the county. The names of John Shepherd, A. R. Conklin, "Pap" Walker, O. I. Mairs, J. S. Gorman, N. Rhin, W. S. Enos and Harvey Boone, who passed upon the Secretary's reports and declared them true and correct, accepting his settlement, are too well known to need vindication; the intent of this article being only to make known what is left unsaid by Craig. The attack is all the more scurrilous and cowardly in that nothing but innendoes are made. Were there anything wrong in existence the bone would be gnawed over with every ghoulish satisfaction. As he can find no ill he bays the moon in the vain hope that the luminary will throw him a crumb. The editor of the INDEPENDENT is now at Los Angles, where he was sent by the people of Independence to advance the interests of the county. As he is alone responsible to the Board of Directors, and they have accepted his reports, it would appear that it is the endeavor of Craig to besmirch some of the principal men of the Valley. An examination of the records and the good sense of the people will show how idle is such an attempt.

Board of Trade.

A meeting was held at the Court House on Thursday evening for the purpose of discussing the advisability of organizing a local Board of Trade to affiliate with the State Board at San Francisco. The meeting was called to order by A. W. Eibeshutz. A. R. Conklin was elected Chairman and A. W. Eibeshutz Secretary. The Assembly was addressed by S. H. Bigland Esq., who explained the object of formation and advantages to be derived from such an organization. It was moved and carried that a committee of five be appointed to solicit membership, correspond with the Board of Trade and provide means for a permanent organization. The committee was ordered to report at a meeting to be held on Saturday evening, February 2d. The appointees were I. H. Mulholland, Chairman, C. W. Craig, Secretary, Nathan Rhine, S. H. Bigland and Jacob Vagt. It is earnestly desired that all the towns throughout the Valley will send representatives to the meeting of February 2d, as the measure will undoubtedly be beneficial to the county.

The Reno Reduction Works.

The Reno *Journal* of last week says: "The reduction works are now running full handed, and the building is stored with ore from all parts of the State. The refining works are not yet completed, but work on that branch is being vigorously prosecuted, and it will not be long before it is ready for refining. The works have been gradually improved within the last year, and it will not be long before they will be able to do as close work as is now being done at Denver, Col. Heavy consignments of ore are being received from the mines in the Eastern part of the State, both milling and smelting, and those who make these shipments are satisfied with the returns. There is now in the neighborhood of forty men employed, and all are kept busy night and day."

Masonic Ball.

A Grand Ball will be given by the F. & A. M. at Independence next Tuesday evening. Everything in the way of music and other arrangements has been perfected and a very pleasureable evening will most certainly be enjoyed. Supper will be given at the Norman House. An open installation will take place at 7 o'clock in the evening. This impressive ceremony will be of interest to all who may behold it. The ball will be well attended. A cordial invitation will be extended to all, no cards being issued.

Card of Thanks.

To the the many friends who were so kind in their administrations during my recent illness, and who spared no pains o trouble in their endeavors to care for me I take this means of expressing my warmest gratitude; and I take pleasure in assuring them that their kindness will not be forgotten. J. O. EDDY.

Salt Lake & Los Angeles.

The friends of the Salt Lake and Los Angeles railroad are now at work in earnest. The Salt Lake City Chamber of Commerce has pledged its assistance and will send a Committee to visit California and Nevada. The committe is instructed to proceed immediately to San Francisco and the cities of Southern California and of Nevada for the purpose of ascertaining the nature and extent of the co-operation promised. The committee are Messrs. Sells, Noble and Groesback. All the members of the Board of Commerce stated that great interest was taken in the project by the public, and they had met with nothing but encouragement. After some further discussion it was decided to commence work at once, and Messrs. Sells, Noble, Conklin, Groesbeck and Thomas were appointed as a committee to solicit subscriptions. They were to start out on Wednesday morning and had already on the old subscription $168,000.

At Los Angeles the Chamber of Commerce has held a meeting and passed resolutions strongly favoring the enterprise. The Los Angeles Chamber of Commerce "pledges itself to enter heartily into the effort, and to devote every means in its power to arouse the enthusiastic support of the people of Southern California for the enterprise, and to devise some measures as will most spedily bring about its successful completion."

The building of the proposed road would open up the southern port of Nevada and bring into the State thousands of settlers. Revenue would then be derived from a part of the State now of little more benefit to us than it would be were it a portion of Arizona or New Mexico.—*Enterprise.*

A Distinguished Visitor.

Daily Union, Jan 18—

Mr. C. Mulholland, editor of the INYO INDEPENDENT, is in the city to-day in answer to the invitation of the President of the Board of Trade. The people of Pasadena are more or less familiar with Mr. Mulholland through recent mention of him in the Los Angeles press, he having made an address before the Chamber of Commerce of Southern California. Mr. Mulholland is taking in Pasadena to-day and expresses himself much pleased with the city, it being his first visit, saying that he felt as though he could not return home without visiting the "Crown of the Valley." As a number of citizens have expressed a wish to meet Mr. Mulholland he will be at the Board of Trade rooms to-morrow afternoon, where gentlemen interested in the resources and development of Southern California will have ae opportunity to meet him.

A Pleasing Sense

Of health and strength renewed and of ease and comfort follows the use of Syrup of Figs, as it acts in harmony with nature to effectually cleanse the system when costive or bilious. For sale in 50c. and $1.00 bottles by all leading druggists.

On visiting the ranch of Mr. John Lucas, at Lone Pine, this week, we were shown pears of the Duchess variety that were in as good condition as when gathered from the tree; and Mr. Lucas states that he has kept fruit from the same tree until spring. Whether it is due to the climate or the variety is not known, but it certainly a treat to have pears to eat in midwinter.

CUT OUT THIS AND SEND WITH ORDER.

EXQUISITE COSTUMES.

Some of the Treasures Contained in a New York Bride's Trousseau.

India camel's hair of the most exquisitely fine and beautiful quality is one of the wool materials which is now honored above silk or satin for a bride's visiting costume, and the old soft Indienne blue shades are revived in these stuffs. A bodice and Grecian draperies of this costly wool, over a skirt of blue Bengaline striped with blue and gold brocade, is the choice for such a gown, while the tea-gown for the same bride is of palest blue India camel's hair, lined throughout with sea-rose surah. A short evening dress in the same trousseau is of olive faille, draped with strawberry lace, and another of palest golden maized is vailed with white silk flowered net, the beautiful devices outlined with gold threads. There is a dinner-gown of black Chantilly lace over a slip of apricot moire, and another one of black velvet with an ample vest of black and damask-red brocade. There is a deep collar and mousquetaire revers of the brocade on the open bodice. The traveling gown is of Austrian-red broadcloth, dark and rich of color. It is literally covered with braid-work in black, with passementerie ornaments and narrow fur bands as additional garniture. An evening wrap, long enough to envelop the whole figure, is of black and cardinal brocade, with bands of black bear-skin down the fronts. Very few of the elegant French visiting and dinner dresses of gray are trimmed with colors. Frequently there is a dash of vivid Roman red, or a bit of violet, olive or garnet on the bodice; but although the colors harmonize with and are very effective against gray, they are not considered in as perfect taste as an entire gray gown, trimmed either with gray silk and silver brading, gray arabesque ornaments in passementerie, or made up with velvet or matelasse of a deeper shade. For instance, a dress is exhibited, of the beautiful "seagull" gray shade, with a Directoire redingote of gray India camel's hair, with a vest and petticoat of shaded gray and silver brocade. There are very wide bands of gray and silver gimp down each side of the redingote, and elegant single ornaments of the same on the bodice portion. A lovely gown of dove-gray velvet, with a wide stripe of gray-white satin, brocaded with silver thistles and foliage, has an Empire overdress above, of dove-gray corded silk, with Louis XIV. vest of the stripe, and a loose double sash at the waist of the same, which disappears beneath the corsage of silk at the sides, and reappears at the back above the slight drapery of the over-dress. Again, a mouse-gray velvet and ottoman silk gown has a vest and mousquetaire cuffs braided with gold and silver.—*N. Y. Post.*

—In some of the counties of Dakota they pay five cents a tail for prairie dogs, and in one place they pass as currency. A man goes into a saloon and for his drinks throws on the counter gopher tails. It looks a little novel in church to see prairie dog tails going into the contribution box, but so it is.

—The method of inoculation for the prevention of splenic fever and other fatal diseases in domestic animals, which was discovered by Pasteur, has spread to Asia, where it is now applied to elephants, with success. Those huge creatures, in a domesticated state, are liable, it seems, as well as other animals in the service of man, to fatal epidemic diseases.

—Not long ago an Italian workman on the water-works at Dover, N. H., received notice that he had been drafted into the Italian army. He at once settled up his small affairs and started for his old home. Asked why he didn't stay here and pay no attention to the draft, he said that if he did he would never dare to return to Italy, for he would be liable to arrest and imprisonment.

—An impecunious young man refers to his "uncle" as a very dear relative. —*Merchant Traveler.*

—There is a dog at Seymour, Ind., who will look at a clock and then put his paw on the exact hour as marked on a card.

—Experiments show that tropical sugar-corn will grow in many parts of Arizona and that it is as productive as in the Sandwich Islands. It is also ascertained that the boxwood tree will grow there.

—A Philadelphia marketman rejoices in a cablegram from Prince Bismarck ordering twelve pairs of canvas-back ducks. The same dealer supplies Wilkie Collins with New Jersey snipe.

MR. CURTIN'S LUCK.

It Surprised Him Into Ignoring a Bargain He Had Made About A Louisiana State Lottery Ticket.

On the application of Richard Keating, an injunction has been granted by Judge Tuley restraining the Adams Express Company from paying to Edward Curtin $15,000 collected on a lucky Louisiana State Lottery ticket. Keating claims that just before the last drawing he and Curtin each bought a ticket with the understanding that if either of them won anything it should be divided. Like nine-tenths of the patrons of such schemes, Mr. Keating drew a big blank—there wasn't a dollar within shooting distance of his ticket. Curtin on the other hand, was something like a man who falls into a river and gets out without a wetting—he was so lucky that he couldn't believe the report that he had won $15,000 until the express company notified him that the money was ready for him. Keating, it is claimed, reminded him of his promise to "divey," but was rudely repulsed. Mr. Curtin was the winner and didn't propose to throw away any of the prize on a man who couldn't pick out a lucky ticket. Hence the injunction and the danger that, if the matter rests much longer unsettled, the lawyers will fatten on the $15,000, and what they leave will be so small that both Curtin and Keating will be ashamed to quarrel about it.—*Chicago (Ills.) Evening Journal*, Nov. 21.

A PREACHER'S STORY.

How Good Mother Wickham Received the New Circuit Rider.

A number of young clergymen, all graduates of the Methodist Theological Seminary at Evanston, met down town the other day and were relating to each other anecdotes of their experience in the various fields to which they had been assigned. "My most amusing experience," said one young brother, "was in a little village in Iowa where the conference sent me to begin my ministerial work. My circuit included three or four little villages and as many school-houses, and I tried to preach a sermon at each place once every two weeks. In the village of Edgewood dwelt a good old lady named Mrs. Wickham, an emigrant from the Green mountains and one of the pillars of the church. I had just been married before going on the circuit, and the next day after our arrival in Edgewood Mrs. Wickham sent for my wife and myself to come to her house.

"In the afternoon we went and were warmly greeted by the old lady. 'I am so glad you've come, Brother L——, and brought your wife,' said she. 'I've been waitin' and waitin' you don't know how anxiously ever since Brother Jones went away, which is nigh unto three months, and there hasn't ben a preacher in this house since. I've got some little things to do that I've ben a-savin' till the minister come, and now you've brought Sister L——. Let's get them off'n our hands and then we can sit down and have a good, long talk."

"I confess I was a little puzzled at this reception, not knowing exactly what the people on my circuit had been in the habit of saving up for the minister to do. However, I was not long left in the dark. The old lady disappeared into the kitchen and soon called for us to follow. We did so, and found the room littered with two or three old bedsteds that had been taken to pieces and spread about the floor. In the middle of the floor stood Mrs. Wickham, with a big kettle of boiling water at her side.

"Now, Sister L——, jest you take this here apron of mine, or you'll spoil your dress,' she said to my wife. 'The pesky bugs have been so bad in these bedsteads that I have sometimes felt jest as if I couldn't wait till you come to give 'em a good scalding.'

"This, then, was a part of the circuit rider's duties in Iowa, thought I; but the old lady seemed to take it so entirely as a matter of course that the preacher should help her with her work that I couidn't well refuse. My wife laughingly put on the apron and went to work and I took off my coat and cuffs and took hold, too. It was a long job and after we had got the bedsteads thoroughly scalded they had to be carried up-stairs, set up, and 'corded,' for they were the old fashioned kind of bedsteads in which ropes did duty in lieu of springs or slats. But this did not end the work, for on coming down-stairs the old lady remarked that the stove was a little warm yet, but that if I was careful I could black it without burning my hands. This was a little too much, and I was about to rebel, but my wife whispered to me that we might as well make a day of it. So we went at that stove and polished it till you could see your face in it, and then helped the old lady clean up the kitchen. By that time the sun was down, and our hostess kindly permitted us to withdraw. Did we stay to supper? Why, bless you, the good soul in her joy at getting her house cleaned up forgot to say any thing about supper. We were glad enough to get home without being asked to dig up the potatoes or build a calf pen. But ever since that day my wife and I have always had a prior engagement when asked to visit Mrs. Wickham."—*Chicago Tribune.*

Sentimental Nonsense.

There is one sentimental story which crops up perennially in the daily press and in the weekly fiction. It represents the affecting home-coming of the middle-aged son in possession of a fortune, to his aged mother, and suddenly changing the poor old woman's lot from one of semi-starvation, and fireless hearth, and scanty clothing, to one of possession of every luxury—an elegant mansion, horses, fine raiment, etc. It is false teaching for the boys who delight in reading such stories and imagining themselves heroes of such tales. In many cases of runaway sons the mothers died of sorrow and neglect, if not of want. In other cases the sons never made any fortune, and even when in real life a boy deserted his mother for years and returned to find her old, lonely, poor and infirm, his belated wealth and care could never be to her what his comfortable support and affection would have been in her middle age. Life is too uncertain for boys and young men to shirk present duties to parents in the expectation of doing great things for them in the future.—*Chicago Journal.*

The Mary Who Had a Little Lamb.

The real and veritable Mary who had a little lamb is still living, a vigorous old lady of eighty-two. Mrs. Mary E. Tyler, of Somerville, Mass., when a girl, raised a lamb from birth and it followed her like a dog, and finally died in her arms, having been gored by a cow. The three most familiar verses were written by John Boulstone, a young man living in the neighborhood, but when a fund was being raised for the Old South Church, Boston, two other verses were added and sold with bits of the lamb's fleece. In this way the ditty rapidly gained notoriety and spread over the country. —*Philadelphia Times.*

—In cleaning out the lower levels of the caves at Dordogne, in France, along with some of the most rudimentary stone arrow-heads yet discovered, there were found a great many oyster shells piled in such a manner as to show that the Neauderthal man used the bivalve as a common article of food. The oyster is thus demonstrated to be the oldest domesticated delicacy known to man. These relics are estimated to be over sixty thousand years old.

A ROYAL OCULIST.

The Noble Life-Work of Duke Karl Theodor of Bavaria.

The work Karl Theodor, Duke Maximilian of Bavaria's second son, is doing has already attracted no little attention in Europe. The veriest medical student whose life and bread depended upon his work never threw himself into the study of medicine with half the ardor of this young scion of royalty. When a boy, botany and chemistry were his favorite pursuits, and no sooner were his school days over than he undertook medicine as a serious study, attending the lectures, going through the hospitals, and finally passing the examinations that qualified him to practice as a doctor. Nor did his work end here. Having chosen the eye as his specialty, he devoted some years to a careful study of the various theories concerning the treatment of the blind. This done, he traveled through Europe, seeking the advice and help of every oculist of special eminence in his profession, and it was only when he had learned from them all they could teach him that he returned to his palace at Tegern, where he established himself as a regular oculist. Any one may consult him, his door stands open to all the world; the only difference between him and any other practitioner being that his rate of charges varies in direct ratio with the wealth of those who seek his aid. If he perform an operation for a rich man, the Prince's fee is the same as that of any other doctor of equal skill, neither more nor less; if, however, the patient be one of those whose means do not allow of their indulging in such expensive luxuries as great doctors, well, he lowers his charges to what they can afford to pay; while, as for the poor—not merely mendicants, but officers with £30 a year, civilians with perchance £40—all such as these Duke Karl Theodor not only attends without fee, but while they are under his care he receives them as guests, feeding and caring for them with the most kindly thoughtfulness. Surely this is an ideal social arrangement! Other Princes before now have received fees, but which of them ever rendered real honest value in return as Duke Karl Theodor is doing? The old Duke's eldest son, Prince Ludwig, is in some respects more interesting even than Karl Theodor. He is now a man about fifty-five, tall and dark, with a haggard, care-worn face, the result of constant ill-health.—*Cornhill Magazine.*

WASHINGTON'S "AD."

How He Let It Be Known That He Had a Farm for Sale.

The origin of advertising is lost in antiquity, but it has been discovered that in George Washington's day the art was practiced even by that great and good statesman. In the first issue of the *Maryland Journal*, August 2, 1773, Washington inserted an advertisement dated at that historic farm now known to all the world as Mount Vernon. This is the "ad:"

MOUNT VERNON, IN VIRGINIA, July 15, 1773—The subscriber having obtained patents for upwards 20,000 acres of land on the Ohio and Great Kanawha (10,000 of which are situated on the banks of the first mentioned river, between the mouths of the two Kanawhas, and the remainder on the Great Kanawha or New river, from the mouth or near it, upwards, in one continued survey) proposes to divide the same into any sized tenements that may be desired, and lease them upon moderate terms, allowing a reasonable number of years' rent free, provided, within the space of three years from next October, three acres of every fifty contained in each lot, and proportionately for a lesser quantity, shall be cleared, fenced and tilled, and that by and before the time limited for the commencement of the first rent five acres of every hundred and proportionately, as above, shall be inclosed and laid down in good grass for meadow; and moreover that at least fifty fruit trees for every like quantity of land shall be planted on the premises. Any person inclinable to settle on the lands may be more fully informed of these terms by applying to the subscriber, near Alexandria, or in his absence to Mr. Lund Washington; and would do well in communicating their intentions before the first of October next, in order that a sufficient number of lots may be laid off to answer the demand.

How to Succeed in Life.

Those who wish to succeed must begin by putting the idea of "luck" behind them. If they will inquire into the causes of the achievements of the successful men about them, they will find that in nearly all cases they fairly rose by their shrewdness, energy and thrift. If they will similarly inquire into the cause of those unsuccessful men about them who are commonly called "unlucky," being unsuccessful, they will almost invariably find it to be sloth, extravagance or drink, or other folly. It will take no one long to discover why the "unlucky" man has not succeeded; he may and will, no doubt, ascribe it to want of "luck," but others who know his weakness of character will ascribe it to a more tangible cause. The man of fair intelligence, of genuine courage, ready to take hard knocks, to push toward the foremost place, to watch for and seize the opportunity, to work steadily at his task, to be frugal, to be economical, and to be honest, need not vainly wish for "luck." Such a man will always have "luck," for whatever there is of it lies in intelligence, endeavor and integrity.—*Philadelphia Ledger.*

The Pope has refused to bless medals to be distributed in Ireland. He is reported to have said: "I cannot bless them. The people of Ireland are disobedient. They seem to prefer the gospel of Dillon and O'Brien to the Gospel of Jesus Christ."

In the waste of tissue that precedes consumption, in the slight cough at night or morning, if Dujardin's Life Essence is taken, a valuable life may be saved. Don't neglect a cough, but take Life Essence and stop it at once. Price, $1.50 a bottle. All druggists.

Origin of Lynch Law.

Lynch law is pretty generally understood as the taking of life without process of law of a felon who has been convicted at the bar of public opinion of an offense deserving of death. But it is not so generally known that the name originated in Campbell County, Va., before the revolutionary war. At that period the country was thinly settled, and was infested with Tories and desperadoes—too many of them, apparently, for the local authorities to adequately punish. Colonel Charles Lynch, a distinguished officer of the revolutionary army, undertook to rid his country of the outlaws. He organized a force, arrested the outlaws, and, having satisfied himself and comrades of the guilt of the accused, executed them without reference to the constituted authorities. While not altogether approving of the desperate remedy for a desperate cause, the beneficial effect of Colonel Lynch's action was recognized and has since been known as "Lynch's law" or "Lynch law." Lynch's process of meting out speedy justice extended to other parts of the country, and is a well-recognized form of redress of grievances to-day, particularly for that class of offenses that are popularly believed not to be adequately punished by the statutes and the courts of the State. Colonel Lynch's brother gave his name to and founded Lynchburg, and left a son who was subsequently Governor of Louisiana.—*Hartford (Md.) Democrat.*

An Interesting Child.

Brown—I want to tell you about my little boy. He——

Jones—Excuse me, my dear fellow, but I've got to catch that 4:10 train, and——

Brown—He is the most ordinary child in existence. Never said a bright thing in his life and is remarkable backward for his age.

(They drink together.)—*Time.*

—The life of the land is what dark ness broods over.—*Time.*

Many men of many minds,
Many pills of vari us kinds.

But for a mild, effective, *vegetable* purgative, you had better get Dr. Pierce's Pleasant Purgative Pellets. The cure sick headache, bilious headache, dizziness, constipation, indigestion, and bilious attacks; 25 cents a vial, by druggists.

A unique campaign cry was the refrain of Southern negros. "Behold the bride-groom cometh, five uv 'em wise and seben uv 'em foolish!"

A VALUABLE MEDICAL TREATISE.

The edition for 1889 of the sterling Medical Annual, known as Hostetter's Almanac, is now ready, and may be obtained, free of cost, of druggists and general country dealers in all parts of the United States, Mexico, and indeed in every civilized portion of the Western Hemisphere. This Almanac has been issued regularly at the commencement of every year for over one-fourth of a century. It combines, with the soundest practical advice for the preservation and restoration of health, a large amount of interesting and amusing light reading, and the calendar, astronomical calculations, chronological items, &c., are prepared with great care, and will be found entirely accurate. The issue of Hostetter's Almanac for 1889 will probably be the largest edition of a medical work ever published in any country. The proprietors, Messrs. Hostetter & Co., Pittsburgh, Pa., on receipt of a two cent stamp, will forward a copy by mail to any person who cannot procure one in his neighborhood.

A man is rarely found who kicks when his name is misspelled in the Police Court record of a newspaper. This is a notable exception to the rule.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

As it is the decision of New York which settles the Presidential games of this country, why not call it the Umpire State?

"A WORD TO THE WISE IS SUFFICIENT."

Catarrh is not simply an inconvenience, unpleasant to the sufferer and disgusting to others—it is an advanced outpost of approaching disease of worse type. Do not neglect its warning; it brings deadly evils in its train. Before it is too late, use Dr. Sage's Catarrh Remedy. It reaches the seat of the ailment, and is the only thing that will. You may dose yourself with quack medicines 'till it is too late—'till the streamlet becomes a resistless torrent. It is the matured invention of a scientific physician. "A word to the wise is sufficient."

Herr Most says that the Anarchists do not intend to rise. Of course they will not, as long as they can lie in bed and persuade their wives to bring them beer.

Carbolic Smoke Ball will cure Catarrh; send $2 to 418 Front St., S. F., Cal.

MANLY PURITY AND BEAUTY

CUTICURA REMEDIES CURE SKIN AND BLOOD DISEASES FROM PIMPLES TO SCROFULA.

NO PERSON CAN DO JUSTICE TO THE ESTEEM IN WHICH the CUTICURA REMEDIES are held by the thousands upon thousands whose lives have been made happy by the cure of agonizing, humiliating, itching, scaly and pimply diseases of the skin, scalp, and blood, with loss of hair.

Send for "How to Cure Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Rheumatism, Kidney Pains and Weakness speedily cured by CUTICURA ANTI-PAIN PLASTER, the only pain-killer plaster.

A BIG STORY

Is going the rounds of all the papers that there is a place in San Francisco where goods are sold so cheap and of such good quality that nearly all the people who can buy for cash anywhere on the Coast send there for family supplies. The story is really true, and there are a hundred reasons why it is so, but we have no time or space to explain them. The next HOME CIRCLE now about ready to send out will tell you all about it. Sample copies are sent free to any address. Just now you can buy genuine French Prunes at 5c a lb, in any quantity, and 4c in 100 lb lots and over to store-keepers and farmer's clubs; Plumbs with the pits in at 3c and 4c; Grapes by the car load or down to 100 lbs at 3c, and smaller lots at 4c; Peaches, unpeeled at 4c to 8c and peeled as low as 5c that are good but rather dark; Mixed Nuts that are pretty fair at 8c, and 100 lb lots 7c or even 6c for some mixtures; the finest selections now 12½c. These prices will not prevail always. In Syrups, we offer genuine Golden in 32 gal. bbls. at 25c, and California at 22½c; ½-bbls., (16 gals.) 5c higher; kegs still 10c higher to pay for packages. Comb Honey Sticks on hand, and we have to sell 5-lb tins, full weight and well put up, at 50c and 60c, and 10-lb tins at $1.00 and $1.10; difference is in color rather than in quality. Poor Butter for cooking at 25c and 40c a roll, or say as low as 16c a lb average; Table Butter of the finest quality. Underwear, Overalls, Boots and Shoes, Rubber Goods, Stockings. Christmas things by the wagon load. You can save money and grow rich by trading at **Smith's Cash Store, 418 Front St., S. F., Cal.**

WOVEN WIRE MATTRESSES AND IRON BEDS. Manufactured by **W. A. SCHROCK,** 21 New Montgomery St., San Francisco, Cal. Send for Catalogue and Price List.

"Poor Simpson! A year ago he was one of thirteen who sat down at a dinner." "What, is he dead?" "No; married last night."

For Coughs, Colds, and Throat Disorders, use "*Brown's Bronchial Troches*," having *proved* their efficacy by a test of many years. *Sold only in boxes.*

Now that the women have commenced smoking cigarettes, there is no danger of them ever capturing the ballot.

A "PUT AND CALL."

This is a funny phrase to the uninitiated, but all the brokers understand it. They use it when a person gives a certain per cent. for the option of buying or selling stock on a fixed day, at a price stated on the day the option is given. It is often a serious operation to the dealer, but there is a more serious "put and call" than this: when you are "put" to bed with a severe cold and your friends "call" a physician. Avoid all this by keeping in the house Dr. Pierce's Golden Medical Discovery. The great cure for pulmonary and blood diseases. Its action is marvelous. It cures the worst cough, whether acute, lingering or chronic. For Weak Lungs, Spitting of Blood, Short Breath, Consumption, Night-sweats, and kindred affections, it surpasses all other medicines.

The Chicago *News* heads an article "Anarchy at Work." Guess not. If anarchy should go to work it wouldn't be anarchy.

BEHOLD

I am the Spirit of Health,

And my message is to the Sick. I crown with a fadeless wreath, those who obey my laws and avail themselves of my counsels. The flowers that I give do not wither, and the fragrance of my roses is perpetual. I bring BLOOM to the cheek—STRENGTH to the BODY—JOY to the HEART. The TALISMAN with which I work never fails. Vast numbers have felt its power, and testified to its virtues. It is

DUJARDIN'S

LIFE ESSENCE!

This wonder of modern chemistry is pronounced to be unequaled for its power of replenishing the vitality of the body, by supplying all the essential constituents of the Blood, Brain and Nerve Substance. After taking the LIFE ESSENCE the nervous symptoms disappear, as well as the functional derangement.

Sleep becomes calm and refreshing. At the same time the patient gains flesh, the features presenting a striking improvement; the face becomes fuller, the lips red, the eyes brighter, and the skin clear and healthy. The hair of the head and beard grows and acquires strength, as also the nails, showing the importance of the action of this medicine on the organs of nutrition. It gives back to the human structure in a suitable form, the lively, animating element of life which has been wasted, and exerts an important influence directly on the brain, spinal marrow and nervous system of a nutritive, tonic and invigorating character, thereby checking all wasting of the vital fluid and the more exhausting processes of life, maintaining that buoyant energy of the brain and muscular system which renders the mind happy, cheerful, brilliant and energetic; entirely overcoming that dull, inactive and sluggish disposition which many persons experience in all their action. Price $1.50 per bottle. For sale by all druggists.

ARM & HAMMER BRAND

To Housekeepers and Farmers.—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons, which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba, etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK

CHURCH & CO'S SODA

ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound packages full 12 *ounces* net, Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

ABSOLUTELY PURE.

ALWAYS UNIFORM AND FULL WEIGHT.

Be sure that there is a picture of a *Cow* on your package and you will have the best Soda made.

THE COW BRAND. DWIGHT'S SALERATUS

My Poor Back!

That "poor back" is held responsible for more than its share of the sufferings of mankind. If your dog bites a man who kicks it, do you blame the dog? On the same principle the kidneys utter their protest against nervousness, impure blood, and resulting constipation. These force them to do extraordinary work in ridding the system of the poisons which are the result of effete matter retained in the blood. Then the sufferer says the back aches; the kidneys are diseased. "Not yet;" but they will be unless the nerves are strengthened, the blood purified, and the constipation removed. These are the causes of kidney troubles, and Paine's Celery Compound removes them quickly. With its tonic, purifying, and laxative effect, it also strengthens the weak kidneys, making it almost infallible in curing all diseases of the nerves and kidneys. If your hopes of cure have not been realized, try Paine's Celery Compound; it gives perfect health to all who complain of "their poor backs." *Price $1.00.*

LITERARY SWEATERS.

One Unfortunate With a Record of Thirty Stories in Three Years.

If the word "sweater" is to stray from the manual industries into literature, it should mean the shabby and extortionate employer, not the employed. An author, however, who calls himself a "Literary Sweater" in a popular journal means that he is the underpaid employed, not the stingy employer. A wondrous tale he tells, if we are to take his confession literally; and if he is writing truth, and not merely romance, Grub street is with us still, and as wretched as in the time of Savage. According to this writer he commenced author at nineteen, which, perhaps, accounts for a good deal. At nineteen a man can hardly have read enough to justify him in attempting the career of letters which, when he has once begun, will leave him scant opportunity or time for reading. He will always be raising crops off a fatigued and starveling wit, and can hardly prosper. The "Literary Sweater" began as a sub-editor on a salary of one guinea a week. For this he worked twelve hours a day and a good many hours of the night. Since those days (and after an attack of "brain fever) the child of Grub street has written sermons and penny novels and biographies and verses and comic copy, and, in three years, thirty tales of twenty-five thousand words each! Compared with this fertility Mrs. Oliphant and the late Mr. Trollope are indolent. For one novel the victim was paid £2 2s., while for a volume of children's tales, 150 pages, he received £3. In short, out of all these enormous miscellaneous labor the victim of competition has earned about £200. The story scarcely seems credible to literary gentlemen more fortunate and less industrious, perhaps well endowed by nature. But whence comes the difference, and why is one laborer paid so differently from other toilers in the same field. He who would solve the question must learn a very great deal more than most of us about the intricacies of the literary market and the supply of and demand for "copy." But if any capitalists are really making fortunes out this employment of pen-man at starvation wages, why, it is high time that a literary trades union was started by the oppressed class, the unknown toilers who write penny novels and Sunday books and London correspondence and biographies and "report cricket and football matches." Can not they combine not to write a three-volume novel under—any sum they please to fix? Unluckily they will be undersold by authors who willingly pay to have their novels printed, and who, if they could, would gladly subsidize a world of readers. But if match-girls can combine, as it seems they can, into a trades union, literary hacks should not lag behind them in organized assertion of their interests.—*Andrew Lang, in Longman's Magazine.*

What Causes Baldness?

Speaking of the number of bald heads to be observed in public gatherings, a prominent physician said to a reporter:

"I can not tell you the cause of baldness. The most plausible view among many doctors was that baldness was especially liable to follow the wearing of a tight-fitting hat, the blood vessels being constricted and the scalp deprived of the necessary supply of blood. But this view has been controverted by a fact brought to light about the Parsees of India. The Parsees are compelled to keep the head covered during the day by a hat so tight as to crease the scalp and possibly the skull, and at night they wear a skull-cap; and yet not one of them has been known to be bald. The Orientals say that worry causes the hair to fall, and it may be true in some cases. The general state of health naturally affects the scalp, but the fact remains that no special cause can be given for baldness. It is doubtless congenital, like many other peculiarities, and the best thing a man can do about it is to keep his body clean, take care of his health and let his scalp alone."—*N. Y. Mail and Express.*

Rapid Aerial Transit.

"A French engineer who rejoices in the name of Imbs has invented a method of aerial transit, by which he proposes to convey passengers from Paris to Calais in an hour and from Paris to St. Petersburg in eight hours," says the *Pall Mall Gazette.* "M. Imbs, it should be stated, is not a balloonatic. His principle somewhat resembles that of 'telpherage,' invented by Prof. Fleeming Jenkin. A shuttle-shaped boat of enormous length is to be supported on elevated rails, and drawn by cables passing over rotary drums, whirling at fabulous speed. The railway (if such a term may be used) need not be horizontal, but each section of it must, of course, be straight. The system, as the inventor remarks, is only applicable to long distances, and will leave the local traffic of the existing railroads undisturbed."

—"I thank you, fellow citizens," said the pale, scholarly president of the female seminary, who had been called upon to preside at a ratification meeting, "for this unlooked-for honor. We have met to express our hearty indorsement of the party candidates presented for our suffrages. And now what is the pleasure of this assembly?" "What's the matter with Furguson?" called out a boy in the back seat; and the audience, as one man, responded vociferously: "He's all right!" "If Mr. Heesall Wright is in the audience," said the bewildered chairman, "he will please come forward to the platform."—*Chicago Tribune.*

MAIDENS OF YUCATAN.

FAMOUS FOR THEIR BEAUTY OF FORM AND FEATURES.

Their Lot Is Seldom a Happy One—Making Cigarettes—Visit to the Lace Makers—A Tale of Woe—Refinement and Amiability.

The meztiza women of that most interesting country are famed for their beauty of form and features, abundant silky black tresses, large dark eyes and easy, graceful manners. Generally they are as good as they are pretty; but their lot is seldom a happy one; perhaps they are too numerous to be justly appreciated. About one in eight enters the state of matrimony, and these appear to be the least happy. Owing to a great excess of female population—the consequence of many revolutions and war with hostile Indians—a large number of women depend entirely on their own exertions, and their field of labor is limited. They are not employed in stores, such places being monopolized by white handed youths who think coarser toil beneath them. Those individuals of the sterner sex expect the gentler, under all circumstances, to remain at home, no matter how painful their position. Orphans must eat the bread of dependence in the house of relations or friends, and on no account shock public opinion by trying to earn a living away from their place of abode, nor may they venture to dwell apart from elders who shall control their every movement. They may suffer everything except actual starvation, yet must submit if they would be respected.

A few are wonderfully clever at making most beautiful fruits and flowers of sugar, but cannot earn a living by it, the time and care needed in the manufacture entailing so much expense that only the wealthiest give an order on very special occasions. Nothing truer to nature than these vegetables, fruits and flowers of sugar can be imagined. A pineapple, an ear of corn, a golden kashew, with its odd shaped appendage, a spray of snow white tuberoses—all equally perfect in form and color; while large, full blown roses, crimson, pink, and yellow, appear as if the frail leaves will fall from the stem if breathed upon. Only the taste convinces us that they are not what they seem; and the flavors given to them by their skillful producers are as delicious as the work is admirable.

MAKING CIGARETTES.

The making of cigarettes affords employment to hundreds of girls, because men, women and children there indulge in the use of tobacco. In city, town and village pretty senoritas sit behind the prison like window gratings deftly wrapping up tobacco in small pieces of the outer covering of maize, which, when toasted, imparts a delightful flavor to the cigarette. Twenty cents a day is the most that one pair of hands can earn.

Dressmakers are numerous. Others anxiously solicit orders to embroider in silk, thread or worsted. Pillow lace was formerly manufactured in Merida, but being expensive, there was no demand for the article. Less costly laces are largely used. No meztiza's holiday dress is complete without ample flounces of it; this converts their simple white linen garments into expensive attire. Cheap lace is imported, but all who can, prefer to wear that made in the country, it being handsome as well as more durable. This is not sold in the stores but in the public market place, where it is carried by servants; for, strange as it may appear, the most poverty stricken have maids, who, besides receiving no wages, frequently help to support their mistresses. Generally they have been given to the family, when children, by their parents—too poor to provide for them. They work hard for little food and scanty clothing, are very faithful, and will bear hardship and ill treatment rather than leave those to whom they have become attached.

Being directed to a family of girls who supported themselves, we made our way along a broken narrow sidewalk to house No. 4 in a row of dwellings, each consisting of three rooms, and an outhouse that served as kitchen. We rapped with our knuckles, and a sweet voice bade us "come in." Pushing open the door, we found ourselves in a room containing a small table and three low seats, occupied by young women, whose appearance indicated that they seldom enjoyed a hearty meal.

A TALE OF WOE.

Yes, they could make all the lace we desired, if we could advance money to buy net and thread; they had none, even to buy medicine for their sick mother. We asked them to resume the work that our arrival had interrupted. This they did, embroidering the net with a long fine needle and thread drawn from white linen cloth. The designs, their own imitation of native flowers, are traced on white paper that is tacked to the net. A frame is used only for very wide lace.

After our order was given a tale of woe was poured forth, with an appeal for money in advance. A few days later a messenger came from our lace makers with an earnest petition for another small installment, and so on, every few days, the full price being paid long before the lace was made. We engaged one woman to make eight yards of lace eighteen inches wide, and having paid the full sum in advance, never obtained more than four yards. These people earn from twenty to thirty-five cents a day.

In spite of their cheerless homes, monotonous lives, and continued toil, there is a winsome refinement and amiability about these maidens that surprises and charms. They seldom indulge in gloomy forebodings, and when things are at their worst make light of them. Their dinner may have consisted of but one tortilla, they may not have a cent in their possession, or a tallow dip to chase the darkness from their empty room, but they will throw open the street door, letting in a flood of sweet moonlight and balmy air. A neighbor has an old guitar, and slender fingers fall lightly upon the strings, while plaintive voices blend in some sweet melody attuned to the sentimental verses of a native poet. It may be a love song, or perhaps a carnival ditty with a chorus.—Harper's Bazar.

It Was a Double Hit.

"Well, good-by," said one as she finally turned to go.

"Well, if you must go, good-by," replied the other.

"Sheestnuts!" called the Italian who keeps the stand on the corner.

Both women halted and looked back at him in surprise and indignation, and it is not unlikely that he has been overhauled by one of their husbands ere this.—Detroit Free Press.

'POSSUM AND 'TATER.

Georgia Gourmets Who Revel in the Chief Delight of the Year.

Did you see that suspicious looking animal hanging out in front of a Marietta street restaurant the other day? Of course you saw it if you passed that way. Of course you knew, even if it didn't have any hair on it, and even if it was butchered and ready for the oven, that it was a 'possum. But did you know that the 'possum market in Atlanta was not to be "sneezed" at? Did you know that "'possum and 'taters" was one of the swell dishes at the restaurants? Well, if you didn't, read along a little further and I'll give you some facts about the 'possum crop which will astonish you as they did me.

This file tailed country animal has been a part of the south as long as there has been any south, and, like the rabbit, he is very prolific, and seems to increase instead of diminish as the years roll on. He is very fond of persimmons, from which the name of opossum is derived. He was nearly always caught up a persimmon tree, and years ago was known as the animal of the persimmon, which was gradually contracted into o'possum.

It is useless to say that the 'possum is a nocturnal animal, and is caught by means of dogs who tree him in some small tree which is easily cut down. Strange as it may sound old 'possum hunters will tell you that the bigger a 'possum is the smaller the tree in which he is caught, and it is only the young 'possums, that climb a very large tree when pursued by the dogs.

Three or four years ago our commission merchants began buying a few 'possums from the country and selling them to few select customers in Atlanta. Before that time a 'possum now and then found its way into the city through the agency of some great 'possum warrior, who always found a ready sale for this toothsome animal. Everything has changed since then, and the 'possum has, through no efforts of his own, arisen to a very important place in the commercial world. One commission merchant informed me that he handled 300 'possums a month, and at Folsom's restaurant 100 of these animals are butchered every month and served out to those who are fond of them, and that means nearly every southern raised man.

The majority of the 'possums sold in Atlanta come from the country merchants, and a large percentage of this number come from up on the Marietta and North Georgia railroad, a section of the country which is regarded as the finest in the world for grapes, rye, 'possums and corn liquor. A number of countrymen living in Fulton county catch many 'possums during the season, and sometimes they bring them in by the wagon load, as they would bring in a load of chickens.

'Possums are sold at various prices, governed according to the size of the animal. The kittens bring from 20 to 40 cents, while the full grown range from 40 cents to $1. The 'possum is ripe by the 1st of September, and he is pulled until the 1st of March. The average sum paid for 'possums a month during the season will amount to something over $500, making the 'possum crop worth about $4,000 to Atlanta.

A dish of 'possum and taters at the restaurant will cost you 30 cents, but if you want a 'possum supper it will cost you from $1.50 to $2. A 'possum supper consists of a whole 'possum, baked with sweet potatoes, and then there's corn bread and coffee thrown in as extras, for 'possum and taters, to be enjoyed, must be eaten with corn bread. There's a very remarkable thing about 'possum meat. It is as greasy as the meat of a hog; but, unlike that, it can be eaten with safety by persons with the weakest digestion. It won't fill you up like pork or other meat, but you can eat a very large quantity of it and feel no bad effects from so doing.

'Possums are caught in a mile and a half of Atlanta, and, as I said before, they are as numerous and prolific as rabbits. My brother, in coming home very late one bright, moonshiny night last winter met a very large and very fat old 'possum on Wheat street, and after a little persuasion the 'possum was induced to accompany him home. The next day that 'possum was the leading attraction at the dinner table.

If you have never tasted 'possum meat you have lived in vain; if you have never inhaled the delicious fragrance arising from a dish of 'possum and 'taters, life has been but a mockery to you, and if you do not get you a 'possum and bake him with sweet potatoes for your dinner to-morrow you'll regret it even to the end of your life.—Atlanta Journal.

Nero as an Orator.

Nero, the Roman emperor, is, perhaps, best known by his celebrated performance on the lyre during the burning of his capital, although this legendary episode is not mentioned by such historians as Tacitus. M. Holleaux, formerly of the French school of Athens, who is making excavations "a la Schliemann" in Bœotia for the French government has found a stone in the sanctuary of Apollo Ptoios, or the "Apollo of the Infernal Regions," which presents the Roman tyrant in another light.

The stone has engraved upon it what M. Holleaux calls "a genuine speech of Nero's," that is to say, one which was not composed for him, but uttered probably ex tempore when giving liberty to the Greeks. Nero plumed himself, of course, on his versatility, and believed that he was an "all round" genius, able to compose, to make speeches, to act and to sing. The discovery of M. Holleaux may, perhaps, prove that the tyrant was a real artist in words at least, for, according to the learned excavator, the fragments of oratory found on the stone were couched in strong, sonorous and emphatic Greek.—Paris Cor. London Telegraph.

An American Compound.

"Cheesine" is a compound which has emerged from a bankruptcy suit in Manchester. It is said to come from America, and it is sold in large quantities in England.

THE FLYING MACHINE PROBLEM.

Lesson Taught by the Bird—Three Indisputable Facts.

The reason of this wonderful effectiveness of the animal machine is obvious. See how this machine has been gradually perfected throughout infinite ages, especially in birds. During the whole geological history of the earth this machine has been steadily improving in structure of skeleton, energy of muscle and rapidity of combustion of fuel, by struggle for life and survival of only the swiftest, the most energetic and the hottest blooded, until an almost incredible intensity is reached in birds. Moreover, in them everything is sacrified to the supreme necessity of flight. Viscera, skeleton, legs, head, all are made as small and light as possible to make room for the great pectoral muscles working the wings. Add to this the exquisite structure of the wings and feathers, adapting them for the greatest effectiveness, and we must admit that a bird is an incomparable model of a flying machine.

No machine that we may hope to devise, for the same weight of machine, fuel and directing brain, is half so effective. And yet this machine thus perfected through infinite ages by a ruthless process of natural selection, reaches its limit of weight at about fifty pounds! I said, "weight of machine, fuel and directing brain." Here is another prodigious advantage of the natural over the artificial machine. The flying animal is its own engineer, the flying machine must carry its engineer. The directing engineer in the former (the brain) is perhaps an ounce, in the latter it is 150 pounds. The limit of the flying animal is fifty pounds. The smallest possible weight of a flying machine, with its necessary fuel and engineer, even without freight or passengers, could not be less than 300 or 400 pounds.

Now, to complete the argument, put these three indisputable facts together: 1. There is a low limit of weight, certainly not much beyond fifty pounds, beyond which it is impossible for an animal to fly. Nature has reached this limit, and with her utmost effort has failed to pass it. 2. The animal machine is far more effective than any we may hope to make; therefore the limit of the weight of a successful flying machine cannot be more than fifty pounds. 3. The weight of any machine constructed for flying, including fuel and engineer, can not be less than three or four hundred pounds. Is it not demonstrated that a true flying machine, self raising, self sustaining, self propelling, is physically impossible?—Professor Joseph Le Conte in Popular Science Monthly.

Driving Away Malicious Spirits.

Whenever we are to ascend a dangerous rapid—and nearly all are so considered by the native itinerary, and probably are at certain seasons of the year—a boatman brings out an old rusty four barreled blunderbuss, rams the barrels full of powder, picks in fuses and stations himself at the side of the boat for the most serious business connected with the ascent. As the boat strikes the first fierce breakers, one barrel is discharged into the water; the gun is then dropped upon the deck, and the sailor tugs for a while at the ropes; when we have swung around and plowed and plunged sufficiently with little progress, he drops his work, whatever it may be, fires another fuse and explodes the half ounce of powder into the foam; the third and fourth chambers are likewise emptied if the business is continued long enough.

This may seem a curious and useless custom to those unacquainted with the Chinese ideas of demonology, but once having mastered this branch of their intricate religious system, it will appear to be the most natural and necessary proceeding. Malicious spirits are in and around all dangerous places, and ready to do all manner of mischief. They can be frightened by terrific sounds; ergo, in passing all such spots the Chinaman naturally yells, beats a gong, explodes firecrackers or powder in any form. At worship, at weddings, funerals, in times of severe sickness, the greater the noise the more likely the demons are to hide themselves. The water is crowded with such demons, and they are either frightened or propitiated by the boatmen.—"Western China."

Scenery in Central Africa.

Day after day you may wander through these forests with nothing except the climate to remind you where you are. The beasts, to be sure, are different, but unless you watch for them you will seldom see any; the birds are different, but you rarely hear them; and as for the rocks, they are our own familiar gneisses and granites, with honest basalt dikes boring through them, and leopard skin lichens staining their weathered sides. Thousands and thousands of miles, then, of vast thin forest, shadeless, trackless, voiceless—forest in mountain and forest in plain—this is east central Africa.

Once a week you will see a palm; once in three months the monkey will cross your path; the flowers, on the whole, are few; the trees are poor, and, to be honest, though the endless forest clad mountains have a sublimity of their own, and though there are tropical bits along some of the mountain streams of exquisite beauty, nowhere is there anything in grace and sweetness and strength to compare with a Highland glen.—"Tropical Africa."

The German Emperor's Childhood.

The German emperor was a bumptious and overbearing child, and never endured being beaten in any game. If he could not get his own way he would first sulk, and then try and take advantage of his position as a "royal child." But this was never allowed. The rule in the nursery was strict equality, and the nurses had stringent orders to enforce it. He has a cold, proud manner, which made him anything but popular with his other playmates. It was quite the reverse with Prince Henry and the little Princess Sophie, who were beloved by all.—New York Tribune.

THE PASSENGER TRAIN CONDUCTOR.

The Most Exacting Position in the Ranks of Railroad Employes.

The passenger train conductor has in many respects the most difficult position in the railroad ranks. He should be a first class freight conductor and a polished gentleman to boot. But in his long apprenticeship on a freight train he has very likely been learning how not to fulfill the additional requirements of a passenger conductorship. In that service he could be uncouth and even boorish and still fill his position tolerably well; now he feels the need of a life time of tuition in dealing with the diverse phases of human nature met with on a passenger train. He must now manage his train in a sort of automatic way, for he has his mind filled with the care of his passengers and the collection of tickets. He must be good at figures, keeping accounts, and handling money, though the freight train service has given him no experience in this line. Year by year the clerical work connected with the taking up of tickets and collecting of cash fares has been increased until now on many roads an expert bank clerk would be none too proficient for the duties imposed. The conductor who grumblingly averred that "it would take a Philadelphia lawyer with three heads" to fill his shoes was not far out of the way.

Every day, and perhaps a number of times a day, he must collect fares of fifty or a hundred persons in less time than he ought to have for ten. Of that large number a few will generally have a complaint to make or an objection to offer or an impudent assertion concerning a fault of the railroad company which the conductor cannot remedy and is not responsible for. A woman will object to paying half fare for a 10-year-old girl or to paying full rates for one of 15. A person whose income is ten times larger than he deserves will argue twenty minutes to avoid paying 10 cents more (in cash) than he would have been charged for a ticket. Passengers with legitimate questions to ask will couch them in vague and back handed terms, and those with useless ones will take inopportune times to propound them. These are not occasional but every day experiences. The very best and most intelligent people in the community (excepting those who travel much) are among those who oftenest leave their wits at home when they take a railroad trip.

All these people must be met in a conciliatory manner, but without varying the strict regulations in the least degree. The officers of the revenue department are inexorable masters, and passengers offended by alleged uncivil treatment are likely to make absurd complaints at the superintendent's office. A conductor dreads an investigation of this sort, however unreasonable the passengers' complaints may be, because it may tend to show that he lacked tact in handling the case. But after becoming habituated to this sort of dealings, there are still left the occasional disturbances which no amount of philosophy can make pleasant. These are the encounters with drunken and disorderly passengers. The conductor, starting at the forward end of his train, finds, perhaps, in the first car one or two "toughs" who refuse payment of fare and are spoiling for a fight.

Care must be taken with this sort of character not to punish him or use the least bit of unnecessary severity, for he will, when sobered off, quite likely be induced by a sharp lawyer to sue the railroad company for damages by assault. The conductor, however, if he be one who has (in his freight train experience) dealt with tramps is able to cope with his customer and confine him to the baggage car or put him off the train. But a tussle of this kind is, at best, far from soothing to the temper, and the very next car may contain the wife of a millionaire, who will expect the most genteel treatment and critically object to any behavior on the part of the conductor which is not fully up to the highest drawing room standard. Experiences of this kind, it can be readily imagined, are exceedingly trying. The conductor cannot give himself up completely to learning gentility, for he still has need for his old severity.—B. B. Adams, Jr., in Scribner's Magazine.

The Onondaga Indian Tribe.

A good picture of the state of affairs reprobated by the recent Indian council is seen in the case of the Onondaga tribe. This tribe owns a reservation of 6,000 acres on the site of the old council fires of the Six Nations. These 6,000 acres are uniformly of the choicest farming lands, and include stone quarries of the finest gray limestone. But the Indians neither farm their lands nor work their quarries. There are twenty-six chiefs for 400 members of the tribe. The old Indian language is still in common use. The state of morals is absolutely indescribable in decent English. The tenure of land is tribal The renunciation of Christianity is a requisite to election as a sachem; but nominal Christianity is professed by about half the tribe. The Feast of the White Dog is celebrated with indecent ceremonies. The question of what to do with the Indians is now necessarily to be reconsidered. It is not enough to hold them on reservations and feed them.—Globe-Democrat.

How Japanese Rooms Are Lighted.

Light is admitted into Japanese rooms, not by glass windows, but by a kind of wooden gratings, over which a white paper is pasted on the outside. This paper diffuses the sunlight about the room very pleasantly, but it is not proof against rain; in rainy weather, therefore, the shutters have to be put up which are used to close the veranda and house in the night time, and which are the only doors in a Japanese house that it is thought necessary to furnish with a bolt. As the putting up and taking down of these shutters is a matter demanding some time, it is usual to have a small door made in them, which is called "the earthquake door," to provide means of quick escape in case of emergency.—Cassell's Family Magazine.

AN IMPROMPTU WEDDING.

A St. Louis Clergyman Recounts One of His Funny Experiences.

Many amusing incidents are met with by a clergyman in the performance of marital rites. It was not long since I was called to officiate at a wedding which was impromptu. The invited groomsman failed to appear, and a neighbor was asked to assist, as, the couple both having been married, were anxious to get out of town and avoid a charivari. The emergency groomsman was verdant, and grew so embarrassed that he completely upset the nerves of the brides-maid. She had two tasks on her mind—one, to arrange her bustle, the other, to fasten a bouquet to the groomsman's lapel. She got these mixed in her mind, and pinned the bouquet first on her bustle, and then tore it impatiently off and pinned it to his coat-tail. They upset half the furniture, and tripped the bride while adjourning to the parlor. A lunch had been provided on a tray close at hand, and when I asked for the ring the assistant promptly handed me a biscuit. Seeing his mistake, for want of a better place he awkwardly put the muffin in the groom's pocket, took the ring from his mouth and handed it to the bride, at the same time poured a glass of wine from the bottle at hand into a dusty piece of lovely Sevres china. Perspiration stood out in great beads on his forehead, and, as soon as the ceremony was performed, he looked at the envelope in his hand containing my fee, broke the seal, saw the money, and I guess, thinking either that he had earned it or that it was intended for him, put it in his pocket, handed me the empty envelope and fled. The couple missed the train by the delay, and when the noise of dozens of inharmonious instruments broke the happy couple's slumbers that night, I believe the groom would almost have shot the groomsman. A little leaven of embarrassment let loose in a bridal party, leaveneth the whole crowd.—*Rev. T. O'Connell, in St. Louis Globe-Democrat.*

Maine's Oldest Inhabitant.

Chesley Heal, of Searsmont, the oldest inhabitant of Maine, died a few days ago at the great age of 109 years. He was bora in Westport, that State, but lived the greater part of his life in Lincolnville and Searsmont, where he has a host of descendants. More than forty years ago Mr. Heal who had up to that time been a very hard-working man, made up his mind that he would never do another day's work, and he stuck to his purpose. The house in which he spent the last forty years of his life he built himself, even to the chimney. He got the lumber unaided and shaved the shingles that covered the roof and sides. He had saved enough to support himself and his third wife, who is now a widow at sixty, and together they lived comfortably in the house which he had built, and out of which he had not been for twelve years at the time of his death. It is said that he had lungs so powerful that his voice, even when he was seventy or eighty, could easily be heard a mile.—*Cincinnati Commercial Gazette.*

A Midshipman's Chest.

Each chest contains all the worldly possessions of one officer, which, thus packed, are as inaccessible as they well can be. Immediately under the lid are three or four shallow trays. One of these are fitted as a wash-stand, with basin, mug, soap-dish and receptacle for tooth-brushes. Another till is a sort of loose box for every thing; while a third contains a miscellaneous collection of neckties, handkerchief, pipes, money and a limited stock of jewelry. Under these trays, and packed more or less tidily, according to the tendencies of the marine servant who "looks after" each young gentleman, are his uniforms, suit of plain clothes, boots, linen and articles of haberdashery. After this explanation, my readers will not find it difficult to understand why the expression "every thing on top, and nothing at hand, like a midshipman's chest" is commonly applied to any chaotic disarrangment on board ship.—*Lieutenant F. Harrison Smith, R. N., in St. Nicholas.*

—Some of the most "taking incidents of fiction have had their origin in reality. Every one who has been touched and amused by "Little Lord Fauntleroy's" courtesy in teaching his grandfather base-ball, will be interested in Mrs. Burnett's assertion that her little son furnished the material for the scene. She says: One day the original thought it necessary to instruct me in the great national game. After a great deal of explaining, I was obliged to admit that I was rather stupid. "Oh no, you're not, dearest," protested the little boy, "you're not at all stupid; but I'm afraid I'm not a good 'splainer; and then, as you're a lady, of course base-ball is not very easy to you."—*N. Y. Tribune.*

—Ministers, preaching on special occasions, sometimes take texts the appropriateness of which strikes an audience at once. It was probably so with a preacher who has just published a volume of sermons. One was "preached at the funeral of a young lady who was burned to death," and the text was: "And they need no candle," etc. This certainly suggested that there could be no recurrence of the calamity that removed her.—*Christian Inquirer.*

—The American girl who marries a foreign title becomes a lesser light in the nobility, but the girl who marries a good American husband becomes the queen of a sovereign citizens.—*Baltimore American.*

A Persian Bazaar.

In the bazaar, Teheran, there are the silversmiths fusing the metal into ingots and bars, hammering at the plates, designing, engraving, chasing and soldering; the work is seen in progress from the very beginning, and woe be to the unfortunate wretch who shall be detected in using alloy or an unnecessary quantity of solder. The workers in leather, in copper, in iron, the manufacturers of textile fabrics, all give a continuous industrial exhibition of their own, which is open to all the world, "free gratis, for nothing." The confectioner produces his sweet stock in trade under the eye of the purchaser. The Persian likes to have everything made specially, and sits by to see it done, to make sure that what he buys is fresh, and that he isn't cheated.

It is not to be wondered at that the bazaars are the favorite lounge of the middle and lower classes. All day long the great arches of the bazaar are thronged by a noisy, pushing crowd, hurrying and gesticulating, but all in high good humor. Here come the mountebank, the buffoons, the proprietors of dancing bears and monkeys, the street conjurors, and the man with the tame lion; the itinerant venders of flowers, lettuce, pipes and hot tea; the sellers of eggs and poultry; the dealers in weapons and second hand clothing, and innumerable hawkers.

It is not to be wondered at that the European traveler finds it very difficult indeed to tear himself away from the innumerable attractions of the Persian bazaar. The bric-a-brac hunter may come upon a priceless piece of faience, which he may possibly secure for a few pence. Here one may occasionally pick up a numismatic treasure, which the owner is glad to part with for a little more than the price of the metal; but here the stranger must beware, for skillful forgeries of old coin are not unknown, even in Persia. But there is one honest custom invariable in the Persian bazaar: if a purchaser is dissatisfied with his bargain the seller is always ready to return him his money if he brings back what he has bought within twenty-four hours. This is a custom never departed from.—Good Words.

Mexican and Spaniard.

The average Mexican, like the average American, is free with his money—neglectful to those little economies which Europeans understand so well, and, therefore, when a rich Mexican land owner is in need of a manager for an estate he looks about for a frugal, thrifty Spaniard, who, if he does make money for himself, does not neglect his employer's interest. It is a common error among Americans to fancy the Spaniard as a boasting, proud fellow, averse to toil and preferring gentility in a faded velvet coat to hard work and comfort. A witty Spaniard has said somewhere that all Spaniards are either Don Quixotes or Sancho Panzas, and there is some measure of truth in this saying. The Sancho Panza class of Spaniard has the hard, homely sense of the New England farmer, and not a little of the dry humor which the Yankee possesses as by birthright. The Spanish language has thousands of sharp and racy proverbs available for every day use, and the hard working Spaniard makes free use of them.

Another Anglo-Saxon misconception is that the Spaniard is a man who is ever seeking a quarrel and whose temper is fiery and uncertain. There are streaks of romanticism in the Spaniard, and any amount of good qualities that wear well in every day life. He is patient, good humored, and will share his meal with an unfortunate countryman. There is much sturdy fiber left in the Spanish nation, which, we must not forget, disputed the control of this hemisphere with ourselves for centuries, and left never to be erased marks of Spanish domination. The Spaniard resembles the Anglo-Saxon in his propensities for colonization, his willingness to emigrate, his capacity for hard work and a certain arrogance the Anglo-Saxon or Spaniard never loses.—Cor. Boston Herald.

Odd Devices for Photographs.

There are various ways for providing surprising results in photography, things that in one age would have been called magic, but in ours recognized as scientific tricks. The ghost picture, for instance, in which a shadowy ghost—through which material objects are visible—is seen between natural attitudes and occupations. This is produced by an almost instantaneous exposure of the figure that is to do duty as the ghost, followed by a full exposure of the figures and properties that are to appear natural. Another novel trick was shown recently in a photograph reproduced by a prominent trade journal, which presented the photographer, seated at a table, playing chess with himself sitting on the opposite side of the table, while he himself stood up in the background looking at his two selves playing.

The figures were all on the negative, which was produced by three successive exposures of the plate, parts thereof being masked each time by a black velvet shutter. Still another trick is that by which a person who likes that sort of thing may appear to be photographed riding upon a flying goose, or a fish, or any other desired style of ridiculous locomotion. This is done by the subject holding upon his lap a huge piece of white or sky tinted card with the fanciful figure drawn upon it. His face appears above the upper edge of the card and seems, in the picture, joined to the funny little body mounted on the goose or fish. The statue picture is made by about the same device.—Photographic Review.

Big Money Made by Tugs.

"What is the most money ever made by a tug in one trip?" was asked of an old tug man in South street.

"The very largest money ever obtained was when two tugs picked up a derelict off Sandy Hook. She was in good condition, but had been abandoned by her crew, who were panic stricken. She was drifting ashore, and the courts allowed a salvage of $28,000 for the two—or $14,000 for a day's work each. But that wasn't a towing job. The biggest price ever paid by a ship for towing at this port, so far as I know, was when a ship captain had beat his way up to the lightship after a long winter voyage from Manila. Reaching this point, with the harbor before him, the northwest wind became a gale he could not face, and he saw the shores of Staten Island fade, and began to think he had Bermuda hard aboard. He couldn't stand that prospect, and was compelled to pay $1,500 by a heartless tug captain of about my size and disposition. That is a sober fact. You will hear tug men tell stories of larger sums, but then those men were intended by nature for fishermen."—New York Sun.

Patti and the Burglar.

It is said that shortly before Mme. Patti left Wales for her South American tour she had a thrilling experience with a burglar. The songstress was alone in her chamber preparing to retire for the night, when she heard a sound in an adjoining room, as if some one were moving about. Patti hastily donned a wrapper and walked boldly into the room from which the sounds came, and stood face to face with a gigantic burglar. He wore a mask to conceal his features, and in his hand he carried a heavy club. The plucky woman asked him what he was doing there.

"Don't you see," he replied in a broad Welsh dialect, "I am stealing your diamonds!"

And he held up to her astonished eyes the most beautiful bracelet which she possessed. Patti did not scream. She simply walked across the room, pressed an electric button to summon the servant. Instead of the servant, however, Signor Nicolini appeared on the scene. The burglar attempted to strike him with his club, but his game was frustrated by Patti. She grasped the club as it was raised in the air. Nicolini and the burglar then clinched, and in the struggle that ensued the enterprising but altogether too candid thief was pitched out of a second story window. He descended gracefully and broke a leg. He was found to be a peasant whom Patti had frequently befriended.—London Cor. New York Press.

The Capital of Brazil.

Rio is a succession of disappointments. The only really pretty place is the Botanical garden, which serves to illustrate what the whole city might be. All varieties of food are peddled about, the venders attracting attention by clapping pieces of wood together and uttering peculiar cries. There are plenty of street car lines, and the cars are always crowded. Everybody reads a morning paper going down town, and an evening paper returning. Humming birds are as numerous as flies, and at night the air is full of fireflies that look like a shower of stars. The women have a bilious look, and are invariably fat, while the men are invariably lean. Next to her complexion the ugliest thing about a Brazilian woman is her voice. She never goes shopping, the servants doing it for her, or going to the shops and getting samples, from which she makes her selections at home. She is famous for her embroidery, made by her own hands. She is generally intelligent, learns readily and has considerable wit. She never goes out alone to call on friends and receives no gentlemen except in the presence of husband or parents.—William E. Curtis.

Cause of Premature Age.

"I have 500 gray hairs in my head and I'm only 36," said a friend to me, and coming down in a street car another friend took up the same theme and asked: "Why is it we get old so quick in this country?" I could not say, not being old. "We live in such a hurry," he said, answering his own question. "All we think of is getting money in this country. In the old country they think of spending it. I mean that we are reckless of how the money goes after we get it, and so we are extravagant and need more money and strive harder to get it, and get old young. I believe there are more lunatics in this state of New York with its five and a half millions than in all France with its thirty-seven millions. In France a man regulates his spending. He has so much income. He makes it go as far as it will, and lives in a regular and methodical fashion on that basis. He doesn't grieve for more because he can get comfort out of what he has. But here we are so anxious to make that we neither spend with economy nor get comfort out of what we spend. We waste our strength to get it, and then waste what we gain, for we don't get the good of it."—Buffalo News.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, FEBRUARY 2 1889

BORN.

BAXTER—At Independence, January 30th, 1889, to Mr. and Mrs. John Baxter, a son.

See the list of apportionments this week

Charley Thurston has gone to Los Angeles.

Omie tells the boss tomale story. Ask him about it.

R. J. Laws, of Hawthorne, was in town during the week.

Judge La Mar, of San Jose, was in town on Wednesday.

A. C. Harvey, of Lone Pine, was in town during the week.

Mr. and Mrs. John Lubken were up from Lone Pine last Tuesday.

Mrs. Ernest Hall, of Keeler, has gone on a visit to Virginia City.

Ed. Ober and Henry Bell were down from Big Pine early in the week.

The flow has slightly increased from the artesian well on Mr. Clark's place.

Frank Densmore is reading law in the office of District Attorney Gill.

Mr. S. H. Bigland started for San Francisco last Monday, going by way of Mojave.

Jimmy McNally came down from Bishop Creek last Monday to play for the Masonic Ball.

Don't fail to attend the meeting at the Church for the purpose of organizing a lyceum.

Mr. M. W. Trask, of Lone Pine, made a business visit to Independence early in the week.

Jack Davies is building on his location below the Stevens ditch and will make his home there.

Messrs. A. C. Stevens and W. H. Jenkins proved up on three sections of land at Georges Creek last Tuesday.

County Surveyor McKnight and wife are at Independence. Mr. McKnight is surveying land under the Eastside Canal.

The delinquent tax list is published this week. It is composed mainly of unpatented land upon which no revenue can be collected.

Henry Levy's stage started for Mojave Monday morning. Mr. Levy states that he will make trips as often as passengers desire to go.

R. E. Barnes, of Cottonwood, has been in town most of the week. He has closed out his business in the county and will reside in San Francisco.

The case of the People vs. R. E. Barnes for assault with a deadly weapon was dismissed in the Superior Court last Wednesday, there being no prosecuting witness.

The weather during the week has been delightful. Warm and pleasant during the day and sufficiently cold at night to hold the fruit trees back from blossoming too early.

The gay and festive John is having a glorious time. Chinese New Year is in full swing and Chinatown sounds like a Fourth of July procession. Lots of "firecrackers" and fire water. Go it, old socks

Rev. E. McEvers will preach to-morrow—Sunday—at Lone Pine at 10:30 o'clock a. m.; Independence 7 o'clock, evening. Sunday school at the M. E. Church at 11 o'clock a. m.; at Lone Pine, 11:30 a. m.

Mr. Henry Cartier left Independence last Monday via Mojave on a visit to the lower country. He will go to Los Angeles, thence to Bakersfield, where quite a boom is now in progress. He will be gone for some time.

The members of Lone Pine Post, G. A. R., will give a Grand Ball at that place on the 22d of February, their regular annual day. The committee can be relied on to give a good entertainment, and particulars will be given as soon as arrangements are completed.

After a lingering illness Henry J. Hartshorne died at Bishop Creek last Saturday. Harry lived in this county for several years and was much respected. He was aged forty years. His many friends will miss his quiet kindness and lament his untimely death.

The following officers were installed last Tuesday evening by Inyo Lodge No. 221 F. & A. M.: J. W. P. Laird, W. M.; P. H. Mack, S. W.; J. S. Gorman, J. W.; O. Mairs, Treas.; J. J. Moore, Sec.; John Shepherd, S. D.; G. W. Brady, J. D.; J. D. Mairs and A. N. Bell, Stewards; Thos. Parker, Tyler.

Mr. Archie Farringdon has been visiting the Darwin country. Mr. Farringdon is a wealthy man and has made his pile in mines. He expresses himself as being very certain of a rich future for Darwin. He will invest money there, and as he is a man whose judgment can be relied on, there must be something in it. He will endeavor to secure railway connection with Darwin.

A rich strike of silver ore is reported in the Flag Staff mine, near Swansea, owned by C. Meysan, of Lone Pine. The parties leasing the mine will soon make a shipment of ore that assays 200 ozs. silver per ton. Felix Meysan and two others are taking very rich ore out of the Coelburner mine, in the same neighborhood. There is a wagon road within a quarter of a mile of the mines, making shipments very easy, and the boys ought to make a good stake.

"Sue," said Tom, "did you hear this?"
(Could it be he meant to trick her!)
"The concussion of a kiss
Always makes the lamp flame flicker."

Then experiments they tried—
In the interest of science,
And their lips, as she complied,
Soon had formed a close alliance.

After trials, two or three,
Happy as a man in liquor,
"See it flicker, Sue," said he.
Quoth the maiden, "let it flicker."

Entitled to the Best.

All are entitled to the best their money will buy, so every family should have, at once, a bottle of the best family remedy, Syrup of Figs, to cleanse the system when costive or bilious. For sale in 50c and $1.00 bottles by all leading druggists.

ON ANNEXATION.

The question of annexing the Eastern slope of the Sierras to Nevada is being discussed a good deal. Believing the general wish of the people can be better ascertained throught correspondence and not by editorial dictation the columns of the INDEPENDENT are open to any citizen who may wish to express his views on the subject. The following was written by one who represents one of our leading industries. He has considerable capital invested and naturally takes a decided stand.

ED. INDEPENDENT:—*Dear Sir:* I notice an article in the *Index* of January 23d favoring the change of boundary line between California and Nevada. It seems that one thought alone would settle that matter so far as these counties are concerned now and forever and that is the question of taxation. For those who are investing their money in permanent improvements and developments the present tax is all they can stand. I am not posted as to the tax of Nevada but of this I am certain: That a small population with limited means for revenue cannot support State government on as low a rate of taxation as can one with large population and proportionate wealth. I also saw in the same paper of different date a wonderful howl on account of the smallness of our representation in the California Legislature compared with what it would be if we were a part of Nevada. This is only the howl of politicians, who would like to increase the offices to satisfy the few who desire live off the many. The business men and farmers care very little about political influence except so far as permanent prosperity is considered and would prefer to pay the expenses of one on a basis of one representative to a thousand voters than for paying for three representatives to the same number. There are always plenty men seeking to change the present condition of things, vainly imagining themselves wiser than their predecessors, and longing for a change that have their autograph upon it. But my observation has been that almost invariably where these changes have been made they have not been to the advantage of the societies or communities that are effected by them. If there was no other reason why we should remain as we are (and there are many) the future of, and pride of being a Californian is enough to induce any thinking man not to vote himself out of it. There is only one California. The attention of the civilized world is directed to it; and their masses are swelling her population, building up her industries and developing her resources as never before in the known world; and shall the people of these Eastern slope counties, just as a glorious future dawns upon them, vote themselves out and abandon their noble heritage? I think not. I have been within three or four months forty years a Californian; and there is only one thing of which I am more proud, and that is that I am an American.

MARBLE WORKS.

January 28, 1889.

In regard to the same matter the Bridgeport *Chronicle-Union* of last week says:

The Nevada Legislative Committee on annexing this section to Nevada, grossly misrepresented the people of these coveted counties, when they stated in Sacramento this week that the people on this side of the mountains were in favor of the scheme. They cannot find ten voters among the 600 of Mono bounty who would vote in favor of it; and as to Alpine, we know the people of that county are opposed to it; and they want a re-survey of the boundary line in hopes of getting more of the Nevada territory into that county. The Committee can gain nothing by such misrepresentations. Assemblyman Coleman knows the feelings of the people in regard to it.

If our neighbors should be dumped into Nevada, as the *Index* proposes, there would be an end to Inyo's boom. Eastern people would pay no attention to the claims of "Inyo county, Nevada." It is worth considerable to be a part and parcel of California, now. There is no rush to the "Sagebrush State," but there is to the home of the orange and grape—California. If the people of Inyo desire a set-back for their county their wishes can be gratified through annexation to Nevada.

As Nevada is 25 years old it should be weaned from Congress and able to support itself by this time; but if it must have the whole earth to enable it to maintain its Statehood it had better relinquish it and go back to Territorial life. This part of the Golden State has passed through the mill of high taxation and we do not propose to increase our taxes to sustain the State Government of Nevada.

The Ball.

The Masonic Ball given last Tuesday evening was a complete success. Soon after 7 o'clock visitors were invited to the Masonic Hall to witness the installation ceremonies. A. R. Conklin, Esq., acted as installing officer and the noble instructions and impressive rites made a deep impression on the spectators. The party then went to Mair's Hall and danced till 2 o'clock. The floor was in excellent condition, the music good, and the management gave satisfaction to all. Supper was given at the Norman House at midnight. The spread was excellent and ample justice was rendered to Mr. Mair's efforts to please. A noticeable feature was a number of cakes upon which Masonic emblems were neatly formed. The success of the evening was fully up to the high standard of Masonic entertainments.

Darwin Mines.

Jack Wilson was at Lone Pine early in the week, bringing Archie Farringdon from Darwin. Mr. Wilson makes a favorable report of the Darwin country. He says a number of chloriders are at work there and are doing well. Considerable dead work is being done in the Defiance and some ore taken out. Mr. McKenzie is taking out ore at the Lucky Jim. Mr. Fitzgerald is working a number of men at Lookout and Mr. Wilson says he is doing well. Mr. Farringdon has secured some mines belonging to Mr. Wilson and will fully develop them. Altogether the outlook for Darwin is brighter than for some time past. It is reported that George Lewis has struck it rich but as yet no particulars have been learned. We wish George every success and hope it's true.

Chinese New Year.

A curious ceremony was gone through by the Chinamen on inaugurating their New Year jollity last Tuesday. A good sized pig was killed and dressed; the outside was covered with feathers, pieces of punk, etc., and then placed in a standing position on the ground with legs spread apart. The cavity was then filled with fire crackers and set off, making a great din, while the Johns stood around and seemed to regard the affair as quite a success. The subsequent end of the porker is unknown but as the Celestial is proverbially fond of baked pig probably a little powder and feathers did not stand in the way of a feast; or he may have been dedicatad to "Joss" and sent to heaven in a handle basket. "Loast chicken," "flied labbit," baked pig and other incidentals makes John think that life is worth living—at New Year.

A Start.

The following letters received during the week indicate that an interest is already being taken in Owens Valley as a result of the recent visit of Messrs. Enos and Mulholland to Los Angeles and vicinity.

LOS ANGELES, Jan. 21, 1889.

C. MULHOLLAND—*Dear Sir:* Since your appearance in this City there has been much inquiry for information about your county and valley. The route and means of getting there; cost etc. from here to Independence; stopping places etc. on the way via Mojave. Send me your paper, with above information, if you can, and oblige. Respectfully,

E. W. LEWIS.

Mr. Lewis is a prominent real estate dealer, of the firm of Lewis & Pinkham, and consequently in a position to know the interest taken in Owens Valley.

BEAUMONT, Jan 22, 1889.

EDS. INDEPENDENT:—*Sirs*—I write for information. There are several of us—a civil engeneer, a blacksmith, carpenter and others who think of visiting your section and getting land. If you have not the time to answer please hand this to some good, honest man (a Presbyterian if you have one) who can do so. We wish to know the elevation of the lake and valley at Keeler; whether the soil is alkali or not; the number of inches of water running into the lake from the river. Is there a road we can travel from any point east of Mohave on the Santa Fe road, north of the Cajon pass. We have had our attention called to your section by Mr. Mulholland's visit to Los Angeles and would be pleased to have acopy of your paper giving information concerning your valley. I am,

Respectfully,

A. J. COMPTON.

Apportionments.

The County Auditor has made the following apportionments:

State Fund	$5,837 91
Salary Fund	6,598 33
Bond Fund	6,466 35
General Expense Fund	5,806 50
Co. Road Fund	1,583 60
Bridge Fund	1,583 60
Hospital Fund	659 84

The County Road Fund was apportioned as follows:

General Road Fund	$395 90
Road Dist. No. 1 Fund	105 22
" " " 2 "	184 68
" " " 3 "	219 95
" " " 4 "	136 96
" " " 5 "	258 91
" " " 6 "	193 81
" " " 7 "	88 47

Young or old, married or single, sick or well, should read this book. Address, PEOPLE'S PUBLISHING CO., St. Louis, Mo.

THE SIGNAL SERVICE.

How Uncle Sam's Meteorological Tipsters Perform Their Work.

In nearly every city of prominence from Maine to California is stationed a man whose sole business is to keep an eye on the weather. The Government pays him, feeds him, gives him the necessary instruments for observation, and calls him a soldier. But the public, for whose benefit all this is done, usually berates him and vows he bears more resemblance to the long-eared animal that hauls the army baggage. For many years the Signal Service has been obliged to bear the slings and arrows of an outraged public, without other retaliation than that of occasionally pouring down water upon the heads of its alleged traducers, snowing them up, roasting, freezing or blowing them into subjection.

There are nearly 150 Signal Service stations in the United States, employing at present about 450 men. They are graded in rank from privates to lieutenants, with General A. W. Greely as chief of the department.

The weather prediction, which is the most important part of a newspaper to many people, and it is at least interesting to everybody, is a peculiar production, and at present is the work of one single individual, who is considered the greatest scientific weather prophet of the age. This is Lieutenant Dunwoody, and he lives at Washington, where he visits the headquarters of the Signal Service daily to predict the weather for the whole country. The Lieutenant, instead of gazing at the sky with a big telescope, as many people imagine, simply sits at a large table, on which are scattered a number of maps bearing telegraphic markings of storms, storm centers, high and low barometers and the general state of the weather in every section of the country. From these data alone he is able to foretell approximately which way a storm will move and what time it will reach a certain spot. The Lieutenant has been in the Signal Service for sixteen years. There are two other Lieutenants, also stationed at Washington, whose predictions are occasionally seen. One of them, Lieutenant Craig, is the acting chief signal officer in General Greely's absence.

At eight o'clock every morning, Washington time, the weather observer at each station throughout the United States takes his observation, which he at once telegraphs to Washington. From this observation is made the prediction which the afternoon papers publish. At eight o'clock in the evening a second observation is made, which results in a prediction that is published in the morning papers.

The cost of fitting out a signal service station is about $5,000. The yearly allowance for the incidental expenses is $500, and big stations, despite the fact that they have no rent to pay, have a hard time to make both ends meet when January 1 arrives.

A few of the Signal Service's maxims regarding the weather are: "A low barometer signifies a storm center;" "winds blow into a storm center;" "storms move spirally;" "the velocity of the wind does not indicate the velocity at which a storm is moving in any direction;" "a storm may move in a circle and create a cyclone by the air thrown off from its center."

The chief instruments used are barometer, thermometers and anemometers. There are many other devices for calculating the wind's velocity, the atmospheric moisture and temperature, but the principle of foretelling weather hinges on a combination of science and brains, and each helps the other out or into a hole.—*St. Louis Post-Dispatch.*

TWO GALLANT MARINERS.

An Incident Whose Heroes Deserve a Place in the Temple of Fame.

"Captain George W. Pendleton, American fishing schooner Cleopatra, of Gloucester, Mass.

"Captain Edmund Miller Hughes, American Line Steamer Lord Gough. Date of rescue, December 27, 1885."

The Lord Gough, though of the American Line of steamers (Liverpool to Philadelphia), is a British vessel; her captain is, I think, a Scotchman. On the 27th of December the Lord Gough, on her way to Philadelphia, saw the flag of distress on the mast of the Cleopatra. The wind was blowing a gale, making it a matter of serious risk for the Lord Gough to send a boat to the rescue, but Captain Hughes thought it his duty to do this, and he called for volunteers. The second officer (I think) and a crew volunteered, and a boat was lowered. Suddenly, however, the signal of distress was lowered from the mast of the Cleopatra. Captain Hughes was much perplexed; it seemed almost certain that the vessel was in extremity. On the whole he thought it his duty to send the boat.

The brave fellows made their way over the perilous waters and the schooner was reached. There they found the master and eleven men, but for the Lord Gough, utterly without hope. Three others of the crew had been washed away and the body of a fourth lay on the deck. In two trips the survivors were conveyed to the Lord Gough. The master of the schooner went in the second trip of the boat, but before doing so he read, with such solemnity as he could in the awful storm, the burial service over the remains of his comrade and then the body was committed to the deep. Of course the first inquiry made by Captain Hughes of the American captain was, why did he haul down his signal? The reply was: "Sir, we saw that you were preparing to make an effort to save us, but we saw, also, that it was a sea in which it was very doubtful whether a boat would live. I said then to my men: "Shall we let those brave fellows risk their lives to save ours?" and they said 'No!' Then I hauled down the flag."—*Cornhill Magazine.*

Turks Buried Alive.

Owing to the hurried burial and the total absence of anything in the way of post mortem examination, a good many Turks get buried alive. When a body, however, is discovered to have moved in the grave, it is attributed to the struggles of the dead with the evil spirits. No mourning badges or change of dress are allowed by the Mohammedan creed, and their resignation to Kismet enables the Turks to regard the loss of their dearest friends philosophically.—Cor. Globe-Democrat.

CHINA AND ITS PROGRESS.

INTERESTING DESCRIPTIVE LECTURE BY GEN. JAMES H. WILSON.

The Social and Political Status of the Celestial Empire—New Ideas from the West Not Received with Cordiality—Autocracy of Science.

Maj. Gen. James H. Wilson delivered a lecture before the American Geographical society, in Chickering hall, New York city, during the course of which he said:

In China the family is the political unit, and if one member goes astray the whole family may become extinct if the emperor pleases. No man can be a governor in his own province, and no governor is allowed to surround himself with officials who are his own relatives. Nepotism is unknown.

The great rivers of China flow east to the Pacific, and the populations gather in the deltas in towns and villages. A peculiarity of the great cities is that they are surrounded with great brick walls, with ditches, parapets and gates, and the gates are regularly opened and closed every morning, as they were 600 years ago. The new capital of Formosa has such a wall, after the manner of the middle ages. The crystallized labor of Japan is seen in these great walls of cities, the great wall of the nation that separates it from outlying provinces and the grand canal. They spend every year large sums to keep the grand canal open. Yet it is inadequately supplied with reserve stores of water.

He spoke of the civil service system of China as a democratic institution, that gave every man a chance to advance equal to that of his neighbors. There is no nobility, only the autocracy of science. The last examination comprised the competition of 30,000 students of mature age, of whom only thirty succeeded. The learning relates to Chinese history and jurisprudence and the philosophy of Confucius, but has nothing to do with modern sciences. There is a college in China presided over by an American, Dr. W. A. P. Martin, but the government is very slow to admit new ideas. It only lately began to investigate electricity. It is not best for the native Chinaman to know too much of modern science.

Gen. Wilson spoke of the successive destruction of Chinese dynasties as inseparable from the Chinese system. As far as it is practicable, wherever there is a Chinamen in office, there is a Tartar to watch him. The operation of the censorship is inquisitorial and offensive. The whole empire is held in subjection by the army and the censor. The present emperor is only 17 years old. He is the nephew of the late emperor; for the first time in many years the direct male issue failed. For some years the practical sway was held by two women, the wife and sister of the late emperor. But recently one of them died, and the empress dowager was left in practical supremacy.

She is never seen by foreigners. She is a remarkable woman. She selects the emperor's wives, and has begun by choosing as his first wife her favorite niece. The imperial clan occupies a place about a mile square, walled in, in the middle of the city of Pekin.

The high officials will not hold intercourse with foreigners. No diplomat has ever seen the empress dowager or the emperor. Not even the great men of China can approach the throne without permission, and then they must be prostrate. There is no such thing as popular education. The people have nothing to do with the government. The government is absolutely isolated, and holds no communication with the people. Ideas never reach the throne from the people. The foreigners are confined to a very small part of the seaboard, except that missionaries are allowed to go to the interior. The foreign merchant does not deal with the Chinese merchant directly, but through servants. Improvements go on slowly. Yet in the interior may be found kerosene, cotton cloth, needles and matches.

The Tai-ping rebellion had its origin with a disappointed student. The antipathy of the rebels to foreigners led to the establishment of the "ever victorious" army, under the celebrated Capt. Ward, and the development of the hair brained Burgevins, whose ambition even soared to first shipping the rebels and then taking possession of the empire. The result was that after he had deserted to both sides several times the Chinese lost him one night while crossing a river.

Gen. Wilson quoted one of the memorials recently sent to the emperor by a high Chinese official, written, according to Chinese customs, on his deathbed, advocating the building of railroads, mining, the construction of ships, coast defenses and other progressive things. That this and other similar memorials have reached the eyes of the emperor is known by the fact that many such memorials have been printed in the Chinese official paper, which has been published about 900 years, not daily, but every now and then. But the ideas of the government progress slowly. The censors are conservative and slow to move and suspicious of foreigners, although they have admitted that the foreigners are not necessarily enemies.

American watches and clocks are making rapid progress in China. The only drawback is the fact that American trade marks are counterfeited.

The Chinese students who began their course of study here, but who were recalled by the censors, complain bitterly of their treatment, and despair of the progress of China while the present regime lasts.

China has no floating capital. The legal rate of interest is 37 per cent. The lowest rate on the most favorable loans is 25 per cent. Every man is liable to spoliation. The imperial treasury is in a constant state of collapse. The empress follows her own judgment, and she is now engaged in a vain effort to turn the bed of a great river, and the treasury is not equal to the task. There is one railroad fifty miles long in China. The present condition of the country as regards its foreign foes, particularly England and Russia, is deplorable. The prospect seems to be that before long the great empire, unless she can arouse herself to progress, will be partitioned. The will of the emperor is supreme, but unless he can be reached and directed there is little hope for Chinese progress.

A curious notion in table decoration is to have the center of the table made into a little pond in which crabs and lobsters are seen and even fish are paddling about.

Writing with a Quill.

Nearly everybody in England writes with a quill. You find them put for public use in courts, in banks, in telegraph offices and postoffices—in fact, everywhere where people must write. If a man prefers to use a pen or a pencil he must carry it with him.—The Argonaut.

The London school board propose to drop the study of Latin and substitute modern languages.

WHALE MEAT AS DIET.

It Is Not Only Wholesome but Also Very Palatable.

Talk of butchers' shops. A whale is a whole meat market in itself. It is a floating Smithfield, a marine edition of Copenhagen fields, an entire Billingsgate. Nobody need ever starve when whales are in season. A few of them would provision a city for a long siege. Fortunately, as the world grows older, it learns to judge more fairly of neglected kinds of provisions. It is a pity that the true value of whale flesh has not been discovered long ago. How many poor families might have been amply fed if only "whale extract" had come into fashion years back. Gourmands should also show their gratitude for the gift of a fresh flavor. It must be admitted, with regret, but without hesitation, that the list of ordinary articles of food is very limited, and that beef and mutton are apt to become monotonous, even when varied with fish and poultry, and all the eatable fruits of the earth as well. The edibility of the whale is, therefore, an exciting discovery."

The only drawback to the pleasant picture which arises when the mind contemplates 50,000 people dining off one animal is contained in the thought that whales, when they are proved to be valuable for dietetic purposes, will be hunted until they become scarce and perhaps extinct. To guard against this danger we have no doubt that whale breeding would come into fashion. People who found other forms of food culture unremunerative might remove to countries where the climate allowed whales to live in comfort and establish whale farms at the mouths of tidal rivers. There is, in fact, no end to the opening for enterprise and ingenuity which are available owing to this remarkable addition to the domestic larder.—Medical Classics.

Tricks of Indian Jugglers.

Some of the tricks are performed by every juggler you meet; others again are of such an astonishing nature, and border so nearly on the miraculous as to be beyond the capacity of an ordinary performer. Of this character are the orange tree trick and the burial trick. If, after having witnessed these feats performed in broad daylight, one is of the opinion that it was an optical delusion produced by the mesmeric power of the operator, I can only say that the ability to obtain an absolute mastery over every faculty of the observer is no less astonishing than would be the actual performance of an apparently impossible feat.

The most noticeable feature in the performance of the Indian juggler is the entire absence of any kind of apparatus. His scanty clothing affords no opportunity for concealment, and every feat is performed simply by manual dexterity or is a delusion effected by mesmeric influences. The famous wizards of Europe and America were nothing without apparatus, and a great deal of the effect of their performances was due to their magnificent and costly paraphernalia. Ingenious mechanisms and expert assistants were absolutely essential to the success of their delusions. As an illustration of this I may mention that Anderson—who, by the way, was the poorest wizard I ever saw, considering his reputation—made oath some thirty years ago in an English bankruptcy court that his apparatus, destroyed by the burning of Covent Garden theatre, London, was worth over $80,000, and that the effort to replace it was the cause of his insolvency. This amount, of course, included stage properties and everything necessary in his business. A 75 cent carpet bag would hold all the appliances deemed necessary by a Hindoo juggler. Even in the beautiful butterfly trick he manufactures his paper butterflies as occasion requires.—Charles E. Romain in The Cosmopolitan.

The Contents of an Eggshell.

The weight of an ordinary new laid hen's egg is from one and a half to two and a half ounces avoirdupois, and the quantity of dry solid matter contained in it amounts to about two hundred grains. In 100 parts about 10 parts consist of shell, 60 of white and 30 of yolk. The white of the egg contains a larger proportion of water than the yolk. It contains no fatty matter, but consists chiefly of albumen in a dissolved state. All the fatty matter of the egg is accumulated in the yolk, which contains relatively a smaller proportion of nitrogenous matter and a larger proportion of solid matter than the white. Therefore, in an alimentary point of view, the white and the yolk differ considerably from each other, the former being mainly a simple solution of albumen, the latter being a solution of a modified form of albumen, together with a quantity of fat.—Cassell's Domestic Dictionary.

LUCKY AT LAST.

The Turn of the Tide in A. W. Adams' Luckless Life.

The grand prize of The Louisiana State Lottery, one-twentieth of which, amounting to $15,000, was won in this city, could hardly have fallen to a more deserving man than A. W. Adams of 915 Guerrero street. There is but little romance in the story of the winner's life; in fact, according to himself, he has never had any luck before. Working as a carpenter, he has earned about enough to keep himself in comfort, hardly ever expecting to share the luxuries so freely distributed to some. Still, as he said to a reporter, ever since he was a child he has had a sort of vague presentiment that before he was 50 years old he would have a streak of luck, and now when within a few days of completing his forty-seventh year he has suddenly sprung, thanks to The Louisiana State Lottery, from moderate comfort to complete ease.

On Tuesday, November 15th, he had returned from his work and was reading the paper when his landlady told him that the "ticket man" was at the door. The "ticket man" was called in, and asked Mr. Adams to produce his tickets, which he did. There on the top lay No. 56,621. When told that the ticket had drawn $15,000 the good man was dumbfounded for the moment, and then felt a joyfulness and youth he had not experienced in years. To make a bee-line to the office where the ticket was originally bought, and seek confirmation of the news was the work of a few moments. There they telegraphed to New Orleans for confirmation of the number, and yesterday the money was paid over to lucky Mr. Adams. There is another lucky person, however, who will help invest the money, as it is whispered that the landlady will very soon be Mrs. A. W. Adams.—*San Francisco* (Cal.) *Chronicle*, Nov. 24.

For paralysis, and nervous diseases generally, Dujardin's Life Essence is the *true* remedy. Hundreds of cases of paralysis have been *prevented* by timely use of this *life-giving essence.* A physician in Oregon writes: "I have prescribed the Life Essence in several cases of sexual debility, and am surprised at the results. I thank you for placing such a remedy in my reach." Price, $1.50 a bottle. All druggists.

The Growth of Children.

The rule of growth is that a child should increase two pounds in weight for every inch in height between three and four feet, and two and a half pounds for every inch between four and five feet. A remarkable fact is that the boys at the public schools and young men at the universities, and entering the public service, here called the upper classes, average about three inches taller, and from six pounds to twenty pounds heavier, than boys in the board schools and young apprentices and workmen. Two causes may be assigned for this: first, heredity; and secondly, favorable surroundings. Deficient and improper food, town air, laborious work at early ages, all stunt the growth. Every one knows how a change from close town to free country life, with plenty of exercise stimulates growth. A good rule for predicting future height is that if five feet is passed between 10 and 11 years of age, the child will be tall; if between 13 and 14 years, of medium stature; if not till 15 years of age, he will be short.—London Reader.

The Way of It.

There were four or five men in a knot, and they were discussing a candidate who had been elected.

"I'm sorry he got there," said one.

"So am I," added a second. "He's a dangerous man."

"He ought to be tarred and feathered, instead of holding an office!" exclaimed a third.

"Yes, and I'd like to put on the tar!" shouted a fourth.

At that moment the man came around the corner, smiling with delight and both hands ready for shaking, and as he halted he said:

"Well, boys, I got there."

"You bet you did!" shouted the four in chorus.

"And I want you to drink with me."

"You bet we will! Hurrah for you!"

And they drank his beer and said they had rather seen all the rest of the ticket defeated than to have him get left.—Detroit Free Press.

Glycerine for Edged Tools.

Carpenters and other tool users who keep up with the times are now using a mixture of glycerine instead of oil for sharpening their edged tools. Oil, as is well known, thickens and smears the stone. The glycerine may be mixed with spirits in greater or less proportion, according as the tools to be sharpened are fine or coarse. For the average blade two parts of glycerine to one of spirits will suffice.—Chicago News.

—Pullman says he can build sleeping cars containing six nice bedrooms, but passengers would have to pay six dollars instead of two dollars per night.

THE "ORPHEUM," SAN FRANCISCO.

This popular Opera House is now producing the great play "Among The Pines" in which the popular young California favorite, Georgie Woolthorpe and her star company appear. All lovers of fine and clever acting are availing themselves of the low prices and great attraction.

De Luizzel—How blue you look. What's up? Le Clerke (on $9.75 a week, with six children)—Bread.

Use the surest remedy for catarrh—Dr. Sage's.

Apropos—Scribbler—I have written an article on birds; how should I sign it? Jenkyns—Use a *nom de plume.*

A VALUABLE MEDICAL TREATISE.

The edition for 1889 of the sterling Medical Annual, known as Hostetter's Almanac, is now ready, and may be obtained, free of cost, of druggists and general country dealers in all parts of the United States, Mexico, and indeed in every civilized portion of the Western Hemisphere. This Almanac has been issued regularly at the commencement of every year for over one-fourth of a century. It combines, with the soundest practical advice for the preservation and restoration of health, a large amount of interesting and amusing light reading, and the calendar, astronomical calculations, chronological items, &c., are prepared with great care, and will be found entirely accurate. The issue of Hostetter's Almanac for 1889 will probably be the largest edition of a medical work ever published in any country. The proprietors, Messrs. Hostetter & Co., Pittsburgh, Pa., on receipt of a two cent stamp, will forward a copy by mail to any person who cannot procure one in his neighborhood.

Thirteen's ill luck; but when you get
Thirteen eggs for a dozen, alack!
Who ever heard of you spoiling the charm
By giving the odd one back.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLane's Celebrated Liver Pills, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

A survivor of the famous "Light Brigade" is now a plumber in Indianapolis. He still knows how to charge.

A SECRET

Of good health is found in the regular movement of the bowels and perfect action of the Liver. These organs were intended by nature to remove from the system all impurities. If you are constipated, you offer a "standing invitation" to a whole family of diseases and irregularities which will surely be "accepted," and you will have guests unwelcome and determined. All these unhappy conditions may be averted by the timely use of Dr. Pierce's Pleasant Purgative Pellets. Powerful for the effectual regulation of the bowels and Liver, establishing a healthy action of the entire wonderful organism with which we are created.

Beaver—Harkins is a man who always holds fast to the truth. Cleverly—Yes; I notice he never lets it escape him.

THE PACIFIC BANK.

The Pacific Bank of San Francisco, which has just declared a dividend to stockholders at the rate of 8 per cent per annum, is no doubt one of the safest, as well as one of the most popular banking institutions on the Pacific Coast. The ample capital and careful management of this bank insures safe, profitable and pleasant business relations.

The Pacific Bank has declared its regular semi-annual dividend, four per cent, at the rate of eight per cent per annum, on the par value of the capital stock, and the same will be paid at its banking house, corner of Pine and Sansome streets, San Francisco, on and after January 2, 1889.

O. F. MINER, Secretary.
R. H. McDONALD, President.

Stranger—May I ask what your occupation is, sir? Tally-ho Driver in College Town—Oh, I coach the students.

HONEY-MOON.

"Say, Perkins, old boy, why don't we see you at the club any more? Has your mother-in-law shut down on you?" "No, Brown; the fact of the matter is, my home is so happy now that there is no inducement for me to have it. You look incredulous, but it's a positive fact. You see, my wife used to suffer so much from functional derangements common to her sex, that her spirits and her temper were greatly affected. It was not her fault, of course, but it made home unpleasant all the same. But now, since she has begun to take Dr. Pierce's Favorite Prescription, she has been so well and so happy that we are having our honey-moon all over again."

A Boston theologian thinks that Robert Elsmere's chief fault was that he smoked too much.

IN GENERAL DEBILITY,

Emaciation, Consumption, and Wasting in Children, SCOTT'S EMULSION of Pure Cod Liver Oil with Hypophosphites, is a most valuable food and medicine. It creates an appetite for food, strengthens the nervous system, and builds up the body. Please read: "I tried Scott's Emulsion on a young man whom Physicians at times gave up hope. Since he began using the Emulsion his Cough has ceased, gained flesh and strength, and from all appearances his life will be prolonged many years."—JOHN SULLIVAN, Hospital Steward, Morganza, Pa.

CONSUMPTION CURED.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 *Power's Block, Rochester, N. Y.*

DROPSY.

We call the attention of those suffering with dropsy to the fair proposition of Dr. H. H. Green & Sons in their advertisement on this page. Try them; it costs you nothing to do so.

FULL WEIGHT PURE
DR. PRICE'S CREAM BAKING POWDER
MOST PERFECT MADE

Its superior excellence proven in millions of homes for more than a quarter of a century. It is used by the United States Government. Indorsed by the heads of the Great Universities as the Strongest, Purest and Most Healthful. Dr. Price's the only Baking Powder that does not contain Ammonia, Lime or Alum. So only in Cans.

PRICE BAKING POWDER CO.
NEW YORK. CHICAGO. ST. LOUIS.

R. HALL'S PULMONARY BALSAM
PRICE 50 CENTS.
—FOR—
Asthma, Coughs, Colds, Croup, Influenza, Bronchitis, Catarrh, Whooping-Cough, Loss of Voice, Incipient Consumption, and all Throat and Lung Troubles.

417 Sansome Street, San Francisco, Cal.

The BUYERS' GUIDE is issued March and Sept., each year. It is an encyclopedia of useful information for all who purchase the luxuries or the necessities of life. We can clothe you and furnish you with all the necessary and unnecessary appliances to ride, walk, dance, sleep, eat, fish, hunt, work, go to church, or stay at home, and in various sizes, styles and quantities. Just figure out what is required to do all these things COMFORTABLY, and you can make a fair estimate of the value of the BUYERS' GUIDE, which will be sent upon receipt of 10 cents to pay postage.
MONTGOMERY WARD & CO.
111-114 Michigan Avenue, Chicago, Ill.

SALESMEN We wish a few men to sell our goods by sample to the wholesale and retail trade. Largest manufrs in our line. Enclose 2 cent stamp. Wages $3 per Day. Permanent position. No postals answered. Money advanced for wages, advertising, etc. Centennial Manufacturing Co., Cincinnati, Ohio.

COMB HONEY.

What's the matter with Comb Honey? Nothing, it's all right, but we have several tons of it, and it won't sell, so we are going to offer it at a price that will make it sell, and quick, too—in 60 lb cases we will say 6c for dark, and 8c for good quality, and in 5 lb tins 50c for good fair article, and 60c for white; 10 lb tins $1.00 and $1.10. Do not fail to order; it is safely put up to carry a long distance, and is as cheap as you will every get it. This is about the close of the year, and we are reducing stock in all lines at the expense of profits. January HONEY CIRCLE will be ready to distribute at any time. Call or send for sample copy. Butter is lower. Flour is lower. Sugar is lower. Good time to buy now, as we are anxious to sell. The rush is over and we have plenty of time to wait on all who call. If you cannot come send in by mail. We have seasonable clothing in Underwear for men, women or children, warm Gloves and Mittens, strong, well made Boots and Shoes for Everybody and Everybody's Children. 5000 pair of Stockings, from 6c pair to 50c. In Canned Goods, Dry Fruit, Wall Paper, and Miscellaneous Goods, we can certainly suit you. Should like to have the chance to try. Write or call. Smith's Cash Store, No. 418 Front Street, San Francisco, Cal.

BEHOLD
I am the Spirit of Health,
And my message is to the Sick. I crown with a fadeless wreath, those who obey my laws and avail themselves of my counsels. The flowers that I give do not wither, and the fragrance of my roses is perpetual. I bring BLOOM to the cheek—STRENGTH to the BODY—JOY to the HEART. The TALISMAN with which I work never fails. Vast numbers have felt its power, and testified to its virtues. It is
DUJARDIN'S
LIFE ESSENCE!
This wonder of modern chemistry is pronounced to be unequaled for its power of replenishing the vitality of the body, by supplying all the essential constituents of the Blood, Brain and Nerve Substance. After taking the LIFE ESSENCE the nervous symptoms disappear, as well as the functional derangement.
Sleep becomes calm and refreshing. At the same time the patent gains flesh, the features presenting a striking improvement; the face becomes fuller, the lips red, the eyes brighter, and the skin clear and healthy. The hair of the head and beard grows and acquires strength, nay, even the nails, showing the importance of the action of the medicine on the organs of nutrition. It gives back to the human structure in a suitable form, the lively, animating element of life which has been wasted, and exerts an important influence directly on the brain, spinal marrow and nervous system of a nutritive, tonic and invigorating character, thereby checking all wasting of the vital fluid and the more exhausting processes of life, maintaining that buoyant energy of the brain and muscular system which renders the mind happy, cheerful, brilliant and energetic; entirely overcoming that dull, inactive and sluggish disposition which many persons experience in all their action. Price $1.50 per bottle. For sale by all druggists.

WOODEN FOOT-WEAR.

Its Popularity Among the Peasants of Northern Germany.

Many German and Scandinavian immigrants who have settled in villages or communities of their own in the Northwestern States and Territories, have brought with them the custom of wearing wooden shoes, such as they wore in their homes in the old world. As a rule, however, they soon abandon the practice. For a while they insist that wooden shoes are better than any other; that they keep out the mud and dampness better than leather, and are cheaper in first cost, besides wearing much longer.

After a little time, however, the usage of the new world becomes too strong for the old world wooden shoes, which are then thrown away. The wearers find, too, that in our severe winters high leather boots and shoes are more protection, and keep out the snow better than wooden ones, which are very like slippers in being cut low at the heel, though they are high and pointed at the toe. There are few Northwestern communities even among those almost wholly inhabited by Germans or Scandinavians, where people in wooden shoes are often met at this day. As these shoes are quite bulky, they are seldom brought across the ocean, and, so far as they are worn at all, are made by hand, of poplar or basswood.

On the European continent, wooden shoes are very common among the peasants of the North, as well as in the greater part of France. France is perhaps entitled to be called the true home of the wooden shoe, which is there called the *sabot*. It is very skilfully, and even gracefully made, and in the province of Auvergne, in Central France, it is customary to decorate the wooden shoe with delicate carvings of flowers and with sentiments.

A pair of wooden shoes is a favorite gift of lovers to their affianced brides, or of gallants who wish to win a sweetheart. These queer lovers' gifts are decorated with carved representations of garlands of forget-me-nots or narcissus, or with a pair of doves, or with two hearts joined together. This custom has given rise to the proverb in Auvergne, uttered of some poor, unattractive girl who has no sweetheart, "Her *sabots* are ungarlanded!"

Skillful carvers of wooden shoes even decorate them with portraits of the persons they wish to present them to, or, if they are a little conceited, with their own. If the shoes are made for a wedding present, as is often the case, upon them are carved the names of the parties, the date of the wedding, and such other facts as there is room for. And on the *sabots* of some of these stalwart peasants there is room for a good deal. These gift shoes, as may be imagined, are not worn to "knock around" the barns and barn-yards with. They are kept for state occasions, and sometimes are put away as precious souvenirs. The peasants have no idea of being ashamed of their *sabots*, as the German immigrants in our Northwest often become. And the peasants, indeed, say that Queen Marie Antoinette once wore a pair of wooden shoes in the palace of the Trianon. It is not probable, however, that any queen ever wore *sabots* as a habit, or for any other purpose than to set the people an example of frugality; because they are not comfortable except to people who wear them a great deal and become accustomed to them.

The peasants of several European countries have a song, varying almost with each province, which tells the mythical story of still another queen, "with her wooden shoes." The song is legendary, and tells that a country maiden, on account of her wooden shoes, was scorned as "very plain" by all sorts of people. But at last the king himself came her way, and falling in love with her simple grace, like King Cophetua, astonished his courtiers by making her his queen. The song has a constant refrain, "With my wooden shoes," and the last stanza runs something like this:

"So I was not quite so plain
With my wooden shoes,
With my wooden shoes,
But the king from his throne
Came to take me for his own,
With my wooden shoes!"

It is said that a machine has been invented in France for making wooden shoes, and it is feared that, under its influence, the rustic artists will give up carving the *sabots* by hand, and consequently that all the picturesque side of a pretty country custom will be lost.—*Youth's Companion.*

Increase of Noxious Insects.

Noxious insects are more numerous and destructive now than they were fifty years ago. Where nature has a chance to work out her laws, all animals, from the highest to the lowest, do not increase beyond proper limits. Even man himself is no exception to this great law; but let a break occur in this great natural chain, and it is felt all along the line. Some species will increase enormously, while others almost entirely disappear. Now as insects are far more numerous than all the higher animals, it follows that if some unforeseen event takes place that favors a great increase of some noxious species, man is sure to be a great sufferer. And this state of things is exactly what is taking place to-day. The reader will naturally inquire why the beneficial ones do not increase as fast as the destructive ones. The answer is, the food plant of the latter has increased enormously, and all the surroundings have favored its rapid increase, while the other, living upon animal (imago) food, is entirely outstripped by the vegetable eating species.—*Vick's Magazine.*

EVERY-DAY LYING.

A New York Preacher's Opinion of Polite Society, Trade and Politics.

Rev. Dr. E. C. Bolles, pastor of the Third Unitarian Church on West Eleventh street, preached recently on the question "Is a Lie Ever Right?" Dr. Bolles said he presumed the people had come to hear him decide the right and wrong of lying to screen criminals, cheer the sick, suppress unnecessary scandal, shield honesty from fraud and innocence from vice. But he wasn't going to touch any such hair-splitting points. They had best be left to every man's conscience and common sense when the emergency came. Nobody would say that war is not an unmitigated wrong, and yet emergencies came in every nation's life when it was necessary to slay one's fellow men. There might be emergencies in any man's life. He would talk of the lies of every-day life.

"I denounce," said he, "the social lie, the lie of a life veneered and varnished with the politeness and fashion of the world; the lies men live and the lies men tell to make life easy, society pleasant and the wheels of existence smooth running. The lies men live are worse than those they tell. The great lie of a life is to live beyond one's means, to keep up appearances, as the phrase goes; to assume a position one does not earn; to form relationships one is not entitled to; to spread examples that are lies, and eventually to defraud creditors who would never have become creditors except for the lie that the man has lived.

"No life in the universe is so hollow as the life of polite and fashionable society. In no life is there more falseness, less honor, more polite palliations, more moral rottenness. There is more honor among thieves than in the parlors of New York, more truth among gamblers and more honesty among sharpers than among those whose pride it is to be the most polite and the most fashionable. To prevent unpleasant truths from coming up, to make things go, to lubricate the social machinery—for these reasons social lies are told and acted, and the result is that society's ideals are bad and its methods false. The truth told in a drawing-room is like a breath of pure air in an atmosphere of fevers and asthmas. Is social life ever right and healthful? one involuntarily asks. If we could have honesty there it might be.

"Another every-day lie is the commercial lie, the profitable, money-making lie. Is there ever any justification for it? The plea is made every day that in these days of competition it is impossible to get along without complying with the general custom of commercial lying. Men say they can't get to the top and be honest with their competitors. I should be sorry to think the flower of our civilization so poisonous, so noxious as that. But, if it is true, one can better afford not to get at the top than to lie. It is not necessary to be rich. It is necessary to tell the truth.

"Now comes the most provoking of all lies. It seems strange that in this Christian church, city and country—a country ruled by a religion which stands for eternal truth—we should have to speak of political lies. Men labor under strange delusions in these enlightened times. They think they can cover their personality under the flag of hall, party or committee. But they can't. Back of every slander, every lie told to pander to the lower elements, every trick, every rascality, every editorial and stump speech which does not deal in truth, there stands a man. He may think himself hidden, but he isn't. Because 'every body else lies' is no excuse. For every deed there is responsibility, and the arrows of God are surer than those of men."—*N. Y. Sun.*

Good Words from Good Books.

Poverty saves a thousand times more than it ruins.

Poverty is one of the best tests of human quality in existence.

No woman without piety in her heart is fit to be the companion of any man.

A young man is not fit for life until he is clean—clean and healthy, body and soul.

There are very few men in this world less than thirty years of age and unmarried, who can afford to be rich.

God makes men, and men make blacksmiths, tailors, farmers, horse jockeys, tradesmen of all sorts, governors, judges, etc.

A daily prayer from the heart of a pure and pious wife, for a husband engrossed in the pursuits of wealth or fame, is a chain of golden words that link his name every day with the name of God.—*J. G. Holland.*

Parchment Axle-Box Bearings.

It is said that experiments have recently been made on Prussian railways with axle-boxes fitted with bearings of vegetable parchment in place of brass. The parchment is strongly compressed before being used, and it is thoroughly dried to prevent subsequent shrinkage. An emulsion of water and oil, any of the mineral oils, is used as lubricant. The parchment soon becomes impregnated with oil, and is able to go a long time without a renewal of lubrication. It is between the body of the journal and the thin edge of the parchment segments that friction takes place. The claim is made that the compressed paper bearings make a tough material that is superior to metal. *N. Y. Post.*

—There has been an increase of nearly one million native communicants to all the Christian churches in heathen lands during the past year.

PITH AND POINT.

—It is often an educated taste and an ability to appreciate an object which makes it valuable, while ignorance can see in it.—*Youth's Companion.*

—If you want to find out a man's real disposition, take him when he's wet and hungry. If he is amiable then, dry him and fill him up, and you have an angel.

—Never be afraid of criticism or ridicule; always remember that opposition and calumny are often the brightest tribute that vice and folly can pay to virtue and wisdom.—*R. B. Hayes.*

—When his animal strikes a 2:20 gait, the turfman knows that he's on the road to wealth. But for the ordinary farmer at the county fair the road to wealth leads through the exit gate.

—Don't keep on hand too many cut and dried theories. A foot rule is a convenient thing for a carpenter to carry about with him; but a man who is always "sizing up" other people's opinions by a private rule of his own is apt to be a bore.

—It is the habitual thought that frames itself into our life. It affects us even more than our intimate, social relations do. Our confidential friends have not so much to do in shaping our lives as the thoughts have which we harbor.

—Innuendoes.—How frequently are the honesty and integrity of a man disposed of by a shrug! How many good and noble actions have been sunk into oblivion by a distrustful look, or stamped with the impression of proceeding from bad motives by a mysterious and seasonable whisper!

—Many a man seems readier to work almost anywhere else than in his own sphere. His proper and legitimate work he counts as drudgery, while there is a certain fascination to him in work which is not his appointed task. Yet, as a practical matter, the man who will not do his own work is not worth much in the doing of any body else's work.

—Some of the simplest things in life are the hardest to learn. Any man who knows how to think, realizes the fact that you can't by any possibility add two and two and make six, and yet hundreds of intelligent people work on the principle that they can secure a $1,200 living out of $900 in cash or its equivalent.

—Life consists not of a series of illustrious actions or elegant enjoyments; the greater part of our time passes in compliance with our necessities, in the performance of daily duties, in the removal of small inconveniences, in the procurement of petty pleasures, and we are well or ill at ease as the main stream of life glides on smoothly or is ruffled by small obstacles and frequent observations.

THE CORAL INDUSTRY.

Rapid Decline of a Once Lucrative Business in Italy.

The report of the British Consul at Naples that the once famous coral fishery of Torre del Greco is rapidly on the decline is a piece of intelligence which has long been expected. Year after year the end of this once lucrative industry has been approaching nearer and nearer. For the coral fisheries of Sicily and the vicinity are experiencing the fate which has overtaken our oyster beds. They have been overdredged. The oyster scalps can with care be replaced, but it is extremely doubtful whether an equally good fortune is in store for the more valuable coral banks. The oyster shell and the pink branch of the coral are composed of exactly the same substance. But, while the mollusk can gather enough of lime for its house in the course of a season or two, the delicate polyp takes a long time to collect particle after particle of calcareous matter from the waters of the Mediterranean and then by some mysterious organic process color the dense mass. It must, therefore, follow, even allowing that the fishermen intermit operations for some years, that what was once a busy occupation for thousands will for years be reduced to very small proportions. This is what the Neapolitans are expecting. During the present season only one hundred boats were equiped, and the average return was last year no more than three tons for each, and of this much was dead or broken coral, which brings a comparatively small price. In the palmy days of the trade Torre del Greco would often send out five hundred boats, each manned by ten or twelve men, the outfit representing, before a single haul was made, about £480 each, while the profit from the venture often rose as high as 20 per cent. It is not half as much now, and the gain has been further reduced because the cost of wages, tools and other expenses have rapidly increased. The result is that the boat owners are abandoning the business, hiring out their craft for ordinary fishing, employing them to transport stone for the builder, who, in new Italy, is so busy, or, when they are unfit for the purpose of the common carrier, breaking them up for firewood. As for the coral fishers, they are migrating in large numbers either to the United States or the Argentine Republic and Uruguay, which has always attracted the Italians far more than the colder regions of the north, while others are finding employment in agriculture or other trades. At Torre del Greco there was a time when fully four thousand people found employment in this industry. Barely a fourth of the number can now make a livelihood, and the chances are, as we have said, that this year will see the ranks of the coral fishers still further depleted.—*N. Y. Herald.*

FLYING WITHOUT WINGS.

The Soaring Powers of a Peculiarly-Built Antipodean Lizard.

"Just keep your eye on that fellow." The speaker had just returned from a trip across the Pacific, and his room was filled with curiosities from every part of Southern Asia and India. From a small cage he had taken a brilliant-hued lizard. He balanced it upon his hand and with a quick motion tossed it into the air. Now a horned toad or one of the common lizards of our western slope would have gone up like a rocket and came down like a rock, but the lizard was not of this kind. It rose, then it seemed to grow larger, to swell out like a balloon, and instead of dropping it sailed away at an angle and deftly alighted on the top of a plush-covered chair, where it clung, looking about in amazement.

"Yes," continued the owner, taking the pet again, "it is a flying lizard—a wingless flyer at that, one of the most remarkable of the lizard tribe."

Tossing the little creature up again, it seemed to spread, and again flew away, buoyed by some mysterious power.

"I got my pet in the island of Borneo," said the naturalist. "It was my intention merely to collect skins, but one day I was walking along through the forest, when I saw what I took for a brilliantly colored butterfly coming along. As I drew nearer I saw that it was a lizard, and, standing perfectly still, it shot by me. Having a switch in my hand I struck it down, and so secured it, and carried it to camp in my pocket. Finding that it would live I kept it, and soon saw that it was quite a pet, and if I can get it to England, shall deposit it in the London Zoological Gardens."

On the wing the bracovolans, as this little creature is called, resembles a richly tinted insect, but when at rest it can be compared to a lizard, with extraordinary protuberances on either side. These are the so-called wings, which are formed of a cutaneous growth upon either side, wing-like in shape and supported by a series of false ribs. In color the lizard is blue and gray, with tints of various kinds and shades. The tail is long, slender, and beneath the head depends a double pouch, giving the animal rather a ferocious appearance.

The wing-like organs are used merely as parachutes. When the lizard leaps into the air the upward current brings them out and enables the possessor to soar away at an angle to a greater or less distance, according to the height from which the leap was made.

The lizard can change its direction while in the air to either side; hence a casual observer might readily believe them to move the so-called wings and actually fly; but soaring is the limit of their powers, and in this way they travel long distances—several hundred yards from tree to tree.—*San Francisco Chronicle.*

A RARE CURIOSITY.

Remarkable Specimen of Coral From the Philippine Islands.

Judge E. W. Knott, deputy superintendent of the State Insurance Department, received recently from Alexander R. Webb, United States Consul at Manila, Philippine Islands, a curiosity that is exceedingly rare; a coral formation found only in the Philippine Archipelago, and is known to the natives as "flower baskets," though why such an appellation should be conferred on it is not quite clear. It is quite different from any coral that has ever been seen by those who have been fortunate enough to view the specimen which the Judge values so highly. The specimen is conical in shape, having a base of nearly two inches in diameter and rises to a height of about eight inches, growing smaller towards its top, where it ends in a tolerably sharp point. The base was formed on a smooth ledge of rock, and the architects of its construction had begun by laying cross sections of a formation resembling finest spun glass. These are laid very carefully and evenly across both ways, and are seemingly interlaced and plaited with similar formations—they could hardly be called fibers, running from top to bottom of this novel lilliputian castle. The work rises in most beautiful shape, growing gradually smaller, until within about three inches of the apex, when evidently the builders found on their hands more of the longitudinal laces than were needed in their work, and they were dropped out as the work progressed, and stand about the toy, forming a sort of tuft around the whole.

These lacings extend about one inch above the top, and contrary to usual formation of coral, they are pliable and when bent assume an upright position on being released.

It would be impossible for machine work or the work of human hands to keep up the symmetry better than these minute animalculæ have done. The work resembles the finest lace, the cross bars fashioned as beautifully as possible. In looking through the cross bars one can see the remains of some small marine animal, probably a crawfish, as a tiny claw or feeler, similar to the ones such animals are adorned with, is plainly discernible. The coral is a pure white and forms a most beautiful ornament, not a spot or blemish on any portion of it.—*St. Louis Republic.*

—Miles W. Standish, of Waldoboro, Me., is a direct descendant of Captain Miles Standish, who came over in the Mayflower in 1620, and he has a son named Miles.

The Sky Gratuitous.

Landrum (real estate agent)—This corner lot you may have for $400 a front foot.

Dingham (prospecting)—Isn't that a trifle steep?

Landrum—Steep! No! Just look at the magnificent sky over this lot that I don't change anything for!—Yenowine's News.

A Polite Boy.

Fond Mother—Little Dick is a perfect gentlemen, bless his little heart! Coming down stairs he politely stepped aside and allowed Mrs. Heavyweight to precede him; didn't you, darling?

Little Dick—Yes, mamma; I was 'fraid she might stumble.—Philadelphia Record.

Two Pictures.

THE BOORISH HUSBAND.

Wife (after putting on a new dress)—Well, John, how do you think I look in it?

Husband (without raising his eyes from his paper)—I guess it's all right.

W.—But, John, you might look at it.

H.—Oh, hang it! don't disturb me.

W. (with a little gurgle in her throat)—Well, John, it was to please you that I had it made.

H. (reading his paper)—It'll do pretty well I guess.

W.—But you haven't looked at it yet.

H.—Don't bother me. Don't you see I'm reading?

W.—But, John——

H.—Don't bother me!

W.—If you would just say——

H.—You are too vain.

W.—Oh, my!

H. (gruffly)—Yes, you are.

W. (hysterically)—And it was to please you that I had it made, and I thought——

H. (impatiently)—Oh, pshaw!

THE KIND HUSBAND.

W. (with a sweet smile on her rosy lips)—How does this dress become me, John?

H. (looking up from his paper)—Why, my pet, it fits you like a glove.

W. (with a little giggle—a happy one)—Don't it now, John?

H. (throwing his paper aside and looking at her with a world of affection in his eyes)—It sets off your beauty splendidly.

W. (with a pretty pout)—Do you think I am beautiful?

H. (emphatically)—To me you are the most beautiful woman in the world.

W. (coming over and kissing him)—Do you think so, John?

H. (effusively)—Think so? I am certain of it. You are the star of my life. My kind, my sweet little wife.

W. (delightedly) — Oh, John! — Boston Courier.

A Little Mistake.

A quiet man with a very florid face was in a crowd of hotel loungers up town the other night, and the discussion turned upon "beating" the weighing machines which respectfully request that a nickel be put into the slot. One fellow could beat it with a wire pushed into it until it touched the spring which puts the weighing machinery at work and lets the needle loose. Another made it work by inserting a knife blade, and another put in a tinfoil nickel nicely adjusted as to size and shape. The quiet young man said soberly: "Why put in anything? Blow into the slot," and jumping upon the platform he fastened his mouth over the slot and puffing out his cheeks threw a small cyclone into the works.

Sure enough the old thing worked and the needle registered his weight at 150.

"Well, I declare," said one man.

"I'll be blowed," said another, with a view of proprieties.

"Try it," said the young man, "it's easy."

So they all tried it; puffed and blew and distended their cheeks until every one of them was tired, but it didn't work.

"Blow harder."

They all blew until exhausted, and still the needle never budged.

"That's funny," and the young man stepped up, blew into the hole, and it again worked nicely.

"Why can't we do it?"

"Oh, you forgot to put a nickel in your mouth first."

The crowd fell down.—St. Paul Pioneer Press.

Potentate Personalities.

The czar of Russia found an excelsior torpedo in his terrapin on Tuesday. The chefski was immediately blown up.

Queen Victoria is preparing with her own hand a pot of pickled peppers for the German emperor.

Emperor Francis Josef is said to be quite willing to dye his whiskers blue, should the czar and Emperor William desire it.

King Milan is now striving to have Queen Nathalie's birth annulled, so that the woman will never in reality have existed.

The sultan of Morocco is financially strapped, and, to recoup his fallen fortunes, has commanded a leading subject to make a will in the sultan's favor and have it probated.

Alfonso of Spain has cut four teeth within two months, and the safety of the dynasty seems assured.—Puck.

From the "Pike Corners' Banner."

"Five dollars reward will be cheerfully paid for information which will lead to the detection of the miscreants who tampered with my old mare's feed bag while I was in Perkin's grocery store on Saturday last. Ezra Hapgood."—Scribner's Magazine.

BURIAL AT SEA.

A Navy Officer Gives a Description of the Impressive Service.

"Why are the bodies of passengers who die on ocean steamships at sea thrown overboard instead of being brought to port?" was asked of a navy officer.

"It depends upon circumstances whether it is advisable to bury a person at sea who dies on shipboard," was the answer. "If the vessel is within a day or two of the end of the voyage, there is no good reason for not bringing the body into port, although a superstition prevails among sailors that if a dead body is kept on board it means the inevitable destruction of the vessel. And it is often the case that when a body is shipped on board a vessel to cross the ocean the fact is kept from the knowledge of the sailors."

"It is contended by some that the burial of a body at sea is not attended with the solemn ceremony that it ought to be?"

"A burial at sea is a very solemn and impressive service. A death at sea casts a gloom over the whole ship, and it is natural for the officers of a vessel to avoid ostentation and display. All mariners are firm in their conviction that when a person dies at sea, unless within a few hours run of port, the body should be given up to the deep. As a rule, vessels are not provided with any place where a body may be kept, nor do the medicine chests contain any drugs or chemicals by which it can be embalmed. Some of the lines carry metallic coffins in which the bodies of those dying at sea, when the urgent request of their friends is made, may be placed until the vessel reaches port. But there is no law, as some have asserted, which makes it compulsory to bury a body at sea.

"As for the burial service, the body is usually sewed up in canvas and heavy pieces of iron, and either grate bars or shot, are fastened to it to cause it to sink. Then the body is taken to the gangway and the officers and crew are assembled by the captain, who reads the Episcopal burial service, prepared for such occasions, the ship being stopped meanwhile. The service being completed, the plank upon which the body rests is tipped up and the body slides into the ocean and sinks, being carried down by the heavy weights. Then the vessel is put on her course and goes ahead. Surely there is nothing inhuman or unbecoming in this."—*N. Y. Tribune.*

THE IROQUOIS INDIANS.

Instead of Dying Out They Are Increasing at a Natural Rate.

Rev. John W. Sanborn, of Lockport, who combines with his parochial duties the functions of chief of the Canandaigua reservation, gave a very interesting talk at Cooper Union, before the New York Academy of Anthropology, concerning the manners, traditions and growth of the Indians.

The aborigines are not dying out, said he, but have been increasing throughout the country at the rate of 600 yearly, and they now number 300,000. Their first contact with civilization was blighting, like a sudden change from hot to cold, but by little and little they are learning to appreciate the comforts it brings. Mr. Sanborn spoke more particularly of the six nations, or the Iroquis confederation. They not only dress in the manner of American citizens, but have many of their home comforts. Mr. Sanborn attired himself in the garb of a chief, worn only on state occasions, and the ladies had an opportunity to inspect the really handsome beadwork on the buckskin jerkin, sash, greaves and moccasins.

An Indian couple sang with him several hymns that had been reduced to writing. There are no labials in the language, but it abounds in grunts, gutturals and nasals, for some of which special characters had to be invented. On the table lay a very big thigh bone and tibia, a powerful jaw bone and a large and singularly perfect skull. They were the relics of an Indian chief found by Mr. Sanford in a burial mound twelve miles from Canandaigua. Evidently the chief was a man of brain as well as of muscle. Several stories were told indicating that the Indian is by no means as stolid as represented, but is bright, keen, and even witty.

Mr. Sanborn believes in Fenimore Cooper's romantic Indians, and to show the reason of his faith read a very pretty tale from the Æsop's fables of the tribe. He praised their hospitality and liberality. The women still cling somewhat to their traditional dress, but they are contented, for they enjoy the same political and social rights as the men. Courting is no longer done by proxy, and the women still have the right to pop the question when tired of waiting for a lover.—*N. Y. Times.*

—Applicant for place—"Well, I don't know, mum. You have a large family, and I'm afraid I couldn't do the work. I suppose you have great trouble keeping girls, don't you?" Sharp housekeeper—"Yes, indeed. There is a big factory full of handsome young men near here, and every one of my servant girls goes off and gets married." "O! Well, I'll try it."—*Philadelphia Record.*

—"Of all the nuisances on God's green earth," said General Sherman at the Union League Club reception the other night, "the shaking of hands by Americans is the worst." Whereupon all the members of the club formed a procession and proceeded to grasp Old Tecumseh by the hand.—*Boston Herald*

THE ARIZONA KICKER.

Its Enterprising Editor Makes Some New Departures.

We take the following from the last issue of The Arizona Kicker:

COME AND SEE US.

We beg to announce to the public that we have established a grocery in connection with The Kicker office. We have run a partition across our shanty and stocked the front end with groceries, and hereafter the two will be one and inseparable.

While we blandly acknowledge that this is not a literary move calculated to raise the public hair on end, we call your attention to the fact that we shall sell six dozen clothespins for 15 cents, and seven bars of soap for a quarter. A customer who wants New Orleans molasses at wholesale or retail will find us behind the counter smiling and affable. The citizen who wants to subscribe for The Kicker will find us in the back room willing to pocket his $2.

FOR SALE.

The editor of this paper has $100 worth of shares in the Spotted Bull Silver Mining company which he will cheap for cash or trade for an all wool undershirt. These shares were presented us with the understanding that we should help rope in eastern suckers. Either the rope is out of order or suckers are scarce. The stock has gone down to two cents on the dollar, and we propose to unload before another assessment is made. We said an all wool undershirt, but we are not going to be too particular about it. If it's half cotton, minus the buttons or flaps, or is ripped up the back, we shall probably make the exchange. Don't hesitate because you may have been told that we are proud and haughty. We know when to come down off the top rail.

A CONVICTED LIAR.

The web footed, knock kneed hyena who edits the literary cattle drive across the street charges us with trying to lord it over this community because we have occasionally appeared in a white shirt and 50 cent suspenders. Those who know us best know how humble and lowly we feel, even when having the only paper collar in the crowd which has not been turned and sandpapered.

We shall occasionally put on a white shirt—not to humiliate our fellow citizens or boost ourselves above the herd, but in order to connect us temporarily with outside civilization. Now and then we shall replace the horse hide strap around our waist with the suspenders spoken of, but it will not be in any spirit of self aggrandizement, such as might justly call for mob violence and the destruction of our office. As for the old grave robber opposite, we have already located him for an Ohio sheriff, who is expected along daily to take him away.

DO NOT FORGET.

We trust that none of our friends will forget the fact that we still continue to board ourself and cook our meals on the office stove. Contributions of vegetables, game, bread, eggs, and whatever is eatable, are always thankfully received and followed by a free puff for the contributors.—Detroit Free Press.

A Practical Education.

Clem (to Uncle Rastus)—Am yo gibbin dat boy ob yours an education, Uncle Rastus?

Uncle Rastus—Well, I dou' sen' him ter school yit, but he kin tell a Philadelfy spring chickin in de dark quicker nor I kin, dat's a practikle eddication. Tune nuff yit fur him ter git into de classicks. Wow, wow, wow.—New York Sun.

She Will Make Them Dance.

"I can only be a sister to you, George: nothing more."

"I'm afraid that won't do, Miss Clara. I have five grown sisters already, and, to tell you the truth, they are not very favorably disposed toward you; they think a match with you would be the mistake of my life."

"In that case, George," said the girl, drawing herself up with haughty grace, "you may name the day."—New York Sun.

All Tastes Suited.

Dealer (politely)—Yes, madam, we have blankets in great variety. I can show you some nice warm ones at $5, $10 or $20 a pair, depending——

Customer (astounded)—Sir, I keep a boarding house and——

"I see. John, show the lady our two for a quarter stock."—Philadelphia Record.

A Young Drowning.

Friend—I can't understand what you are driving at in this poem of yours.

Poet (confidentially) — Neither can I—that's where its merit lies.—Yankee Blade.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, FEBRUARY 9 1889

J. J. Gunn has gone to Darwin.

S. D. Thurston has gone down to Bakersfield.

There is no place like home—but whose home?

The Supervisors met last Monday, a full Board being present.

G. H. Palmer has been up from Lone Pine during the week.

Charley Summers, of Bishop Creek, was in town during the week.

See the advertisement for the G. A. R. ball at Lone Pine on the 22d.

Mr. N. G. Fairman came in from Panamint last Thursday. He left town next day for Darwin.

Louis Sammon, a Mono Lake rancher, was murdered by a Piute last week. The redskin has been captured.

Mrs. Jennie Lillard, of Davisville, arrived at Independence last Wednesday on a visit to Mrs. W. S. Enos.

The Legislature of Nevada has granted an appropriation of $10,000 for the purpose of boring artesian wells in that State.

The merchants of Los Angeles say they can sell goods under San Francisco prices. Our merchants should give them a trial, or at least ask for price-lists.

W. H. Jenkins will clear and seed about 200 acres of land below the Stevens ditch this spring. Over 100 acres have already been cleared of brush.

About 200 sacks of ore was shipped from the Flag Staff mine, near Swansea, this week. The ore assays over 200 ozs. silver per ton and $16 gold.

Pap. Walker is overrun with business now that so much travel is going by way of Mojave. He is studying plans for a big hotel and feels tired when night comes. Grant is chief architect.

W. S. Enos and C. Mulholland got back to Independence from Los Angeles last Wednesday. They respectfully ask all who are interested to meet at Mairs' Hotel on Monday evening to hear their report.

Phil. Cartier has gone to San Francisco. He has been in poor health for some time and goes down for medical advice. He will go from there to Montana, where he has relatives.

Rev. E. McEvers will preach to-morrow (Sunday) at the school house at Lone Pine at 10:30 o'clock a. m., Sunday School at 11:30 a. m. At the M. E. Church, Independence, at 7 o'clock p. m. Sunday School at 11 a. m.

During the holidays Los Angeles alone paid $40,000 for chickens and turkeys that were imported from Kansas and Iowa. Poultry raising will be a valuable industry here in Inyo when railroad connection is perfected.

Farewell.

Mr. W. A. Hampton left for Davisville, Yolo county, his former home, last Tuesday morning, going by way of Mojave. During his residence of nearly two years here Will made many friends, who regret his departure. On Monday evening a farewell party was tendered him at Mairs' Hall. Dancing was continued till midnight. The evening was passed very pleasantly, the thought of the near departure of one who has been always identified with the social interests of town being the only thing that prevent a complete enjoyment. Good-bye, Will, and luck go with you.

A War In Mono

The officials of Mono county telegraphed Governor Waterman last week that settlers in Antelope Valley are much alarmed over the gathering of Indians there on account of two Indian murderers being in jail at Bridgeport. The Sheriff asked for fifty stands of arms and ammunition immediately. Governor Waterman was at Folsom when the dispatch arrived. He telegraphed from that place to get a company of military in readiness to march at once if needed.

Meteorological Summary for January, 1889
Keeler, Cal.

Mean reduced barometer	30.070 inches.
Mean temperature	39°
Highest temperature	59°
Lowest temperature	30°
Monthly range of temperature	23°
Mean dew point, 22°	
Mean relative humidity 55 per cent.	
Prevailing direction of wind, N., S. E.	
Maximum velocity of wind, direction and date, 42 miles N. W. 25th.	
Precipitation	0.04
Number of clear days	19
Number of fair days	6
Number of cloudy days	6

D. C. GRUNOW,
Private, Signal Corps.

Board of Trade.

The meeting held on Saturday evening of last week for the purpose of organizing a local Board of Trade was called to order by A. R. Conklin Esq., Chairman pro. tem. Representatives were present from various parts of the Valley. It was moved and seconded that a permanent organization be formed. The subject being brought before the meeting it was discussed at length by number of gentlemen, and on the call of question was put and carried. The following officers were elected: A. R. Conklin, President; S. G. Sneden, 1st Vice-President; E. H. Edwards, 2d Vice-President; P. H. Mack, Secretary; O. I. Mairs, Treasurer. Directors, John E. Jones, Round Valley; A. Spencer, Lincoln; J. H. Stoutenborough and J. L. Bourland, Bishop; Geo. H. Hardy, Laws; Geo. Collins, Poleta, S. P. Roberts, Cottonwood; Jas. Crocker, A. K. Eugley, Big Pine; T. J. Goodale, Fish Springs; N. Rhine, Independence; W. L. Hunter, Georges Creek; R. S. Carrasco and A. C. Harvey, Lone Pine; Thos. Boland, Keeler; Wm. Walker, Olancha; J. F. Hawley, Cerro Gordo; John C. Eldy, Darwin; F. Fitzgerald, Kookout; H. G. Chickering, Panamint. The elective officers were designated as an Executive Committee and the Directors as a Committee on Finance. It was resolved that no connection should be formed with San Francisco at present. After discussing many subjects pertinent to the welfare of the county the meeting adjourned subject to the call of the President.

Entitled to the Best.

All are entitled to the best their money will buy, so every family should have, at once, a bottle of the best family remedy, Syrup of Figs, to cleanse the system when costive or bilious. For sale in 50c and $1 00 bottles by all leading druggists.

SPLINTERS

From a So-called Bursted Boom.

The cry has gone abroad that the Los Angeles boom is bursted and the city dead. A plain statement of facts by a disinterested observer may be of some interest, and not one syllable is written but what is true. The whole world has heard of the climate and country about the City; and people who have not been there think the beauty of both has been wildly exaggerated. The writer of this article has been over a good part of four continents and has seen most of the places renowned for beautiful scenery and fine climate, including the south of France, Italy and Greece. There is no disputing about taste; but in the opinion of the writer Los Angeles is superior to any other country he has ever seen in climate and beauty of surroundings. Every variety of beautiful and delicate flowers bloom in the gardens in January; and at that season the air is as balmy as the middle of May or beginning of June in the British Islands. This tells the story of winter weather. In the summer constant breezes blow from the ocean and prevents any discomfort from heat. The valley in which the city stands is about sixty miles in diameter one way by about fifty the other and is surrounded on all sides by mountains except where it is bounded by the ocean. The great valley is not uniformly level but is beautifully diversified by low hills and lovely smaller valleys. The soil is as fertile as any in the United States. Enough rain falls to make fine crops of grain of all kinds without irrigation. From the city to the sea at Santa Monica the distance is sixteen miles, and all the way the country is as beautiful as the well-kept grounds of the great private residences of Europe; here nature has scattered all this beauty with a lavish hand. Volumes have been written about the beauty of Los Angeles and as much more could be said without exhausting the subject. So far from exaggeration not half enough has been said on the subject. There is scarcely a township in the entire county that would not furnish material for a long and interesting article, and certainly not one but deserves being written about. But here at home we are more interested in the

PERMANENT PROSPERITY

Of Los Angeles than of its beauty. The fate of Inyo county and of Owens Valley is linked with that city. Nature has made the ties that bind us together. When people talk of a bursted boom and a dead town they speak in ignorance. There was a wild excitement and speculation in town lots all over Los Angeles county. This speculation affected nearly everybody. Ministers preached from their pulpits on Sunday on the vanity of this world and its pleasures; and on Monday morning rushed in among the crowd who were speculating in town lots and were among the most eager speculators. This craze was not building the city; but neither did it hinder the building. The craze has run its course, like whooping-cough, or measles, and the solid business and building of the city goes on with as great regularity and energy as at any former time. Throughout the length and breadth of Los Angeles there is hardly a street where new buildings are not going up. In the central part of town very many of these are great solid structures, such as would do credit to the largest cities in the world. The banks are crowded with customers every business hour of the day; and all of these institutions are doing a profitable business not equalled in other cities. Capital is flowing into the city in search of investment in greater volume than ever; and it is easy to borrow any amount of money on good city property. Last week a party of men from Chicago were in the city investing one and a quarter millions of dollars in cable railways. The work will cost about two million dollars and the remainder of the stock is owned by citizens of Los Angeles. The Company now has over three hundred men employed extending their lines and putting in machinery. The engines and other works fully equal the big machinery of the Comstock mines. None of the cable cars are yet running, all the cars in use being drawn by horses and mules. The cars now carry an average of twenty-five thousand passengers each day. Many miles of streets have already been made of granite or other hard rock crushed to the size of hens eggs and put on to a depth of eight inches. This is pressed down with a steam roller weighing fifteen tons, and then overlaid with a coating of bituminous limestone softened by steam. When the covering cools it is as hard as rock and makes a roadway as smooth as a floor. This work is done by contract and costs the city 27½ cents per square foot. This work is still going on and Los Angeles may justly claim to have the handsomest and best roadways in the world. Large public parks are being made and no expense will be spared to make them worthy of the city. The new City Hall, now very nearly finished, is an immense building. The churches, schools and other public structures are all on a scale suitable to a great city. These are but a few among many facts that might be given to show the rapid growth and unmistakeable evidences of permant prosperity in Los Angeles. Oil wells are found within a few miles of the city; these and railroads soon to be built that will supply abundance of coal, will solve the problem of cheap fuel. Then many branches of manufactures will be established. Already capital is secured to start a shoe factory that will employ three hundred hands. The reports of lively times at Los Angeles attracted swarms of mechanics there, far more than there was any possibility of employing. Many of these wandered about the streets for weeks vainly seeking work, and then wandered away to other places and reported that the town was dead. There are still too many carpenters there. Many of the leading citizens now are men who went to Los Angeles within the past five or six years. These men knew but very little about Inyo county; many of them had never heard of it before the arrival of the delegates who recently went to the city from Independence. These delegates were listened to with very

CLOSE ATTENION

And what they told of Inyo excited the deepest interest and a good deal of surprise. Many of the leading men of the city said they would strongly favor a move to issue bonds and give a subsidy to any company who would build a railroad to Owens Valley. Capitalists want new openings for investments; the whole city wants our beef and potatoes, our apples and other products; architects and builders want our marble, which will give them cheap material for the most beautiful buildings that could be constructed. Men of wealth want to get within easy reach of the grandest mountain scenery on this continent; and several said that they would never rest until a road should be built that would bring them here. It surprised these men beyond measure to learn that within their own State was a region that more than rivalled the Alps, and that might might be reached in a few hours instead of traveling weeks over two continents and an ocean to see. Los Angeles is a prosperous and rapidly growing city; direct rail connection with it is as necessary to Inyo county as connection with the heart is necessary to the hands and feet. The attention of the city has now been directed to Inyo county and we should not slack in our work one hour till we have the railroad completed.

SUPERVISORS' PROCEEDINGS.

TUESDAY, February 6th, 1889.

The Board of Supervisors met at Independence on the above date and organized by electing E. Robinson Chairman. Present, E. Robinson, J. D. Harger, S. G. Sneden, J. J. Stewart and J. C. Eddy.

The following bills were allowed and ordered paid.

Darwin Election Board	$ 30 00
Keeler " "	30 00
P. H. Mack, Sunds	10 25
A. W. Eibeshutz, mdse	110 66
H. H. Howell, Board of Education	23 50

Whereupon the Board adjourned till 2 o'clock p. m., at which hour it reassembled, all the members being present.

The following bills were allowed.

W. A. Chalfant, printing	$17 00
S. G. Gregg, Sunds $18 85 allowed	15 85
L. Wood, mdse	13 85
P. W. Forbes, Exp. as Dist. Att'y	20 00
D. Stubblefield, wood	81 00
Claims of Jauvier, Laird, Shannon, and Crough as members of Board of Education rejected.	
A. W. Eibeshutz, cutting wood	9 00
O. I. Mairs, boarding prisoners	46 00
J. J. Moore, stamps	2 30
L. Baxter, cutting wood	3 00
Ind. W. Co., water and pipe	19 50
Mrs. J. Keppler, Janitress	30 00
H. S. Crocker, blanks	2 60
H. G. Pinmley, Constable fees	41 20
Bill of Geo. W. Neill for transcribing testimony in J. P. Court rejected.	
J. W. Murphy, labor and material	65 25
I. J. Woodin, salary as Co Physic'n	150 00
Mrs. M. Lewis, care indigent sick	160 00
J. G. Dodge, conveying sick	8 00
I. P. Yaney, J. P. Fees	9 00
J. R. Eldred, Sunds. $22.46, allowed	17 46
N. Rhine, mdse. $93 87 allowed	41 32

Moved and carried to reconsider the rejection of petition for bridge at Lone Pine. Petition reconsidered and rejected by the following vote: Ayes: Harger, Sneden, Robinson and Eldy. No: Stewart.

C. Mulholland, printing	178 82

Bids were opened and examined for construction of bridges at West Bishop. At Matlick's Ford: W. Weichart, $550; C. Wonacott, $350; O. Hampton, $285 75. At Rowan's Ford. W. Weichart, $550; C. Wonacoott, $350; O. Hampton, $305 50. A proposal was received from M. S. McLeod offering to build both bridges for the sum of $425.

Whereupon the Board adjourned till 10 o'clock a. m. February 6 h.

WEDNESDAY, Feb. 6, 1889.

The Board met at 10 o'clock a. m. Minutes of preceding day read and approved. The bid of M. S. McLeod for building bridges across Bishop Creek at Matlick's and Rowan's Fords was accepted, the price to be $425 for both bridges.

The Clerk of the Board was ordered to advertise in the INDEPENDENT for building a bridge across Owens River at Alvord.

Quarterly reports of overseers of Road Districts Nos. 1, 3, 4, 5 and 6 were examined, accepted and approved.

The following claims were allowed.

Panamint Election Board	$ 30 00
H. Evans, R'd Dist. No. 1	83 75
M. S. McLeod " 3	131 09
G. H. Palmer " 6	188 75
S. J. McMcMurry " 4	30 00
W. James " 5	125 63
S. J. McMurry, conveying sick	7 00

The rates for Lone Pine Water Company were fixed at the same figures as former years.

A petition for a new road district was rejected, also petition of F. E. Russell for rebate of taxes rejected.

Ordered that 25 per cent. of the County Road Fund be transferred to the General Road Fund.

The County Auditor was ordered to transfer $100 from the unapportioned funds and $100 from the Revolving Fund to the Rebate Fund.

The Board adjourned till 10 a. m. Thursday.

THURSDAY, February 7, 1889.

The Board met at 10 o'clock a. m., all the members present. Minutes of preceding day read and approved.

Ordered that $4 be paid to A. Rossi as a rebate on taxes.

Reports of the Auditor and Treasurer were examined, accepted and approved.

The claim of H. S. Crocker for books was allowed in the sum of $35 25.

The Board rejected a proposal made by Messrs. Conklin and Laird to collect taxes on personal property and desert land.

The notice for an election to be held at Bishop Creek to decide on the issuing of school bonds was not published for such length of time as the law requires. By this defect the bonds are worthless and the Board ordered that the same be destroyed, and that all taxes collected for their redemption and interest thereon be refunded.

A list of forty Grand Jurors and eighty Trial Jurors was drawn to serve for the ensuing year.

Whereupon the Board adjourned until Friday, February 8th, at 10 o'clock a. m.

FRIDAY, February 8, 1889.

The Board met pursuant to adjournment, All the members present. Minutes of preceding day read and approved.

The following resolution was adopted:

HONS. JOHN ROTH AND CYRUS COLEMAN. *Gentlemen:*—At a regular meeting of the Board of Supervisors of Inyo county, held at Independence on the 8th day of February, 1889, the following resolution was adopted:

Resolved: That our representatives in the State Senate and Assembly be requested to use every honorable means to prevent any change in the law now in force, by which County Boards of Supervisors are given power to impose a license tax on the business of raising, grazing, herding and pasturing sheep. And the Board of Supervisors of Inyo cauuty respectfully ask that you present the same to the Senate and Assembly now in session. Signed,

E. ROBINSON,
Chairman.

The following resolution was passed:

Resolved: That P. A. Chalfant, County Assessor, be instructed not to assess or list desert land entries, homestead, pre-emption and timber culture entries where the title to the aforesaid still remains in the United States. But if there are improvements on aforesaid entries to assess said improvements. And instructed further to collect all taxes on personal property at the time of assessment when the party assessed is not the legal owner and has no title to real estate. Signed,

E. ROBINSON,
Chairman.

Ordered that A. W. Eibeshutz be authorized to make an abstract of all lands patented in the county from March 5th, 1888, to March 4th, 1889.

Petitions for roads in districts Nos. 4 and 5 rejected on the ground that right of way not being secured. Proposed roads are at Georges Creek.

The Auditor was ordered to draw a warrant in favor of A. Stecker for work on the Court House when the same shall be completed.

The following claims were allowed:

J. D. Harger, per diem & mileage	$44 10
S. G. Sneden " " "	43 80
E Robinson " " "	30 30
J. J. Stewart " " "	34 80
J. C. Eldy " " "	40 80

The Board adjourned.

The First Result.

Mairs' team has arrived from Mojave with eight tons of general merchandise for different parties in town. This shipment by team is the first result of the discussion of the question of freights and railroad extension. The whole country is thoroughly aroused on the subject. Every merchant in the county declares that he is ready to make a contract for a year or longer to have his freight hauled by way of Mojave. Every farmer in the county says railroad connection with San Francisco is a continual drain upon his resources without even the possibility of ever returning him a dollar in the way of giving him a market for anything he has to sell. It is true that without a railroad farmers cannot send produce to Los Angeles and merchants will continue to buy their goods in San Francisco; but the teams engaged in freighting will eat hay and grain and to that extent will be a benefit to farmers. The freight on this first shipment amounts to $480.

CUT THIS OUT AND SEND WITH ORDER.

OLD KAISER WILHELM.

He Was Taught Economy by His Mother and Always Practiced It.

"The Cosmopolitan's Memoirs," a new book just out in London, concludes an interesting series of anecdotes with the following one of the best he has to tell, and makes up for much in the book which is lacking alike in truth, tact and taste, while it gives a charming picture of the old Emperor, whose great love for his mother remained ever fresh to the end of his long life; "Is there not something inexpressibly touching in the following trait, almost pathetic in its homely simplicity? The Emperor, who would allow only wax candles in the White Hall, because they set off the beauty and dresses of women better than gas, burned oil lamps in his own apartments. He had been staying on a visit with his Marshal of the Court, Count Stolberg-Wernigerode, and on his return to Berlin observed to his Aide-de-Camp a la suite, Count Lehndorff, that certainly none of his lamps gave half as good light as other people's. He was told the reason of it; other people burned mineral oil and he had always refused to do so. Convinced at last, the Emperor allowed all his lamps to be fitted with new burners, and when the system of kerosene was inaugurated one winter day before dinner he expressed himself vastly pleased with the experiment. But his joy was short lived, for on returning to his usual sitting room after the meal he found it filled with a thick, pestilential smoke. Summoning his faithful old valet, Engle, he demanded what it meant. The aide-de-camps knew perfectly, but feigned ignorance. "Your Majesty," said the old man, "always turns down the lamp when he leaves the room, and these new-fangled things won't be turned low without smoking." "Well, then," said the Emperor, let the old burners be put back again. When we were very poor," he added, turning to his generals, "and I was only a little boy, my mother invariably lowered our lamp when it was not wanted. I have always done so in remembrance of her, and I never mean to do any thing else."

A GREAT ENTERPRISE.

The Proposed Railroad Between St. Petersburg and the Pacific.

From an engineering point of view, there are no serious obstacles to the building of the road, except the bridging of the large rivers of West Siberia, and the passing of the enormous swamps of that region, which would probably make the road far more costly than the Transcaspian railway. There are no steep grades that would present serious difficulties.

The distances of the several sections of the line are given as follow:

	Miles
Tyumen to Tomsk	800
Tomsk to Irkutsk	1,050
Irkutsk to Stryelka	800
Stryelka to Usuri	1,000
Usuri to Vladivostok	300
Total	3,950

The cost of construction is estimated at from five to seven hundred million rubles. The whole distance from St. Petersburg to Vladivostok is estimated at six thousand miles; and the time necessary for accomplishing this distance, at from sixteen to seventeen days. To this must be added a few days for the journey from Japan and China to Vladivostok, and from St. Petersburg to Western Europe. Thus the journey from Eastern Asia to Europe might be made in from twenty to twenty-two days instead of from thirty to thirty-five days, which it takes steamers to run from China to England.

It seems improbable that the effect of this road upon the trade of the world will be as important as that of the American Pacific roads. The political condition of Siberia is not favorable to an energetic development of its resources and to an extensive immigration; and, the length of the road being so great, it is doubtful whether it would be able to divert the carrying-trade to any great extent from the steamers using the Suez canal route.

What the Face Betrays.

A man who has made a close study of physiognomy says: "A man's occupation or condition has a good deal to do with making his facial expressions. Intellectual pursuits, like studies or the scholarly professions, when coupled with temperate and moral habits of life brighten the face and give a person a superior look. Magnanimity of nature or love of studies and arts will make a bright, glad face, but contrary to this, a man may have a face that does not please anybody, because of a love of self to the exclusion of all others, notwithstanding his learning and worldly shrewdness. Soldiers get a hard, severe look, overworked laborers constantly look tired, reporters look inquisitive, mathematicians look studious, judges become grave, even when off the bench, the man who has domestic trouble looks all broken up. An example of the ludicrous side of this subject is to see a third-class lawyer stalking around a police court looking wise as an owl. The business makes the face I say. There's the butcher's face, the saloonkeeper's face, the beggar's face, the ministerial face, the lawyer's face, the doctor's face, the hoodlum's face, all so distinct, each from the other and singly, that I seldom fail to recognize those callings showing through the faces. And what city boy can not recognize a genuine farmer on the street as a farmer the moment he sees him?"—*Atlanta Constitution.*

—An Englishman recently stated in court that he married at the age of sixteen because he was out of work.

—A city lad, on being allowed to visit the dairy the first morning of his stay at the farm, was found helping himself to the thickest of soured milk. "Why, Johnny!" cried his grandmother. "You don't like that, do you?" "No," quoth Johnny, resignedly, "not very well, but I'm pretty hungry." "But didn't you know 'twas sour?" "I knew it wan't like our milk at home," said Johnny, "but I thought maybe 'twas the only kind you had in the country."

POOR CARL DUNDER.

He Gives a Harrowing Account of His Last Sad Failure in Politics.

"He vhas no use!" sighed Carl Dunder, as he entered the Woodbridge street police station yesterday and dropped into a chair.

"To what do you refer?" queried Sergeant Bendall.

"To some politics. I shan't nefer try to onderstand him again. I vhas all busted oop und broke down."

"How?"

"Vhell, der poys came in my place two months ago und say to me: 'Oldt mans, go in und bet on Cleaflands. He vhas der man to get there. He vhill shweep der country.'

"Vhell, I like to make some money, und so I bet feefty dollar on Cleafland. It vhasn't fife days before some poys come in my place und yells out: 'Hoorny for Harrison! He vhas der poy who knocks 'em all out! Say, oldt mans, if you like to make some money, bet on Harrison. He vhas der feller to sweep dis country.'

"Vhell, I pelief dot, und I bet feefty dollar on Harrison. Pooty soon an alderman comes in my place for a glass of beer un says: 'Say, Dunder, don't you be some fools. If you haf some money oop on Cleaflands take her down right avhay. Dot election vhill knock him out like a crowbar.'

"Dat scares me like eaferytings, und I gif fife dollar to withdraw my bet. It vhasn't fife days pefore anoder alderman comes in my place to say: 'Hello! Dunder, hef you make a shackass of yourself? How? Vhy, dot Harrison vhas for der Chinese und high taxes, und we shall scoop him high und dry. He shall nefer know who hit him. Let me advise you as a friendt not to put any money on him.'

"Vhell, dot scares me again, und I gif ten dollars to withdraw my bet on him."

"I see. Go on."

"Vhell, pooty soon a feller comes aroundt mit a banner on which vhas painted, 'Chipman Headquarters,' und he says: 'Look here, Mister Dunder, I like to gif you a pointer. Chipman vhas sure to get there. Put oop dis banner und go mit der swim.'

"Vhell, I like to go und swim, und so I tell him to nail it oop. It looks pooty nice, but he vhas oop only one day pefore a feller comes along mit a banner which reads: 'Baker Headquarters—Der Poy for our Wotes,' und he says: 'Say, oldt mans, don't get left. Baker vhas going in by five thousand majorities, und if you vhasn't a Baker man you vhas a greenhorn. Put dis oop as queek as you can.'

"Vhell, I put him oop, und Baker vhas left out in der cold, so vhas I."

"It is sad," sighed the sergeant.

"You bet mit me it vhas! A feller comes in my place und looks all aroundt und whispers: 'Say, Dunder, if you like to make money bet on Mr. Youngblood. He goes in by three thousand ahead of Littlefield. I vhas inside, und I know.'

"Vhell, I make a bet of feefty dollar, but pooty soon a feller comes in, calls me into a corner, und says: 'Mister Dunder, you vhas all right mit der boys, und I like to see you ahead. Bet two to one on Littlefield. Dot vhas straight.' Dot scares me so I can't sleep nights."

"You lost your fifty?"

"Of course! I lose on more ash ten men, but vhas I to blame? Vhas I some green horns to bet? Here comes a man who says dot Governor Burt vhas shust so shure as next winter, und he likes to gif me a pointer. Next comes a man who says he vhill bet his lung dot Luce runs vhay ahead, und he likes to gif me a chance to scoop der poys. How vhas I to tell?"

"You can't."

"Und so I lose more ash two hoopered dollar und vhas all proke oop."

"You'd better let politics alone after this."

"Sergeant, see me in der left eye! If I haf some more to do mit politics in dis country I like to be sent to der crazy house! Next time I don't vote for nopody, und if some pody comes to gif me some pointers I break him in two so queek he can't holler! I vhas all mixed oop. Eaferypody vhas elected—eaferypody runs vhay ahead—eaferypody vhas sure, und nopody comes out like he oxpects—nopody but me, und I vhas wegetables!"—*Detroit Free Press.*

Wouldn't Do for Her.

Mrs. Newrich, a wealthy lady on her travels, visited Paris, and while there it occurred to her that it was the proper thing to have her portrait painted by a famous artist. Accordingly she hunted up the studio of a painter of high reputation, and rapped at the door. A pupil of the great painter opened the door to the lady.

"Will you kindly sit down and wait a few moments?" he asked, when Mrs. Newrich had stated her errand.

"Well, I'm in a hurry. Is your master busy?" she asked.

"Yes, madam, he is engaged on a study."

"On a *study!*" exclaimed Mrs. Newrich. "Well, no matter, I guess I won't wait. I shan't want him to paint *my* picture. *I* want an artist who has got all through with his studies!"—*Youth's Companion.*

Will Resort to Law.

Little three-year-old Robin had got a shoe-button in his nose, and his mother took him, in great haste, to the doctor's. The removal of the button caused the little fellow some pain.

"Well, my little man," said the physician, "are you all right now?"

"Yes, I are all right now," was the indignant response; "but I are doin' to have oo 'rested'"—*Harper's Bazar.*

—The bustle is rapidly going to join the dodo and the chestnut bell. The dodo is getting into bad company.—*Chicago News.*

—Smith says he isn't lazy. He lies abed to economize. It costs nothing to sleep, but the moment he wakes up his expenses begin.

—"My son, why is it that you are always behindhand with your studies?" "Because if I were not behindhand with them I could not pursue them."

HYPERBOREAN DAINTIES.

Queer Articles of Diet Used by the Kowak Indians of Alaska.

During the Alaskan and Arctic cruise of the United States revenue steamer Corwin in the summers of 1884 and 1885, Third Lieutenant John C. Cantwell, with a steam launch and small party, explored the Kowak river to its source. In his report of the exploration, the following account is given of the resources in the way of food among the Kowak Indians who inhabit the river banks. Fish naturally forms the staple of their living:

The fish which are not immediately eaten are cleaned and dried for winter provision. Fish are sometimes, though not commonly, buried without having been previously cleaned, and allowed to become putrid before eating. This form of diet is esteemed a luxury, but owing to the trouble of transporting it when traveling, it is not so common as the dried fish. I attempted to eat some of the buried fish, but in spite of the fact that I was very hungry at the time, I could not retain it on my stomach, and I believe that a white man would starve before his stomach could be educated up, or down, to this repulsive diet.

The tundra plains are filled with berries, and we had no difficulty in obtaining an abundance of salmon, blueberries and wild raspberries, while in places, especially on high land, the wild currant was found of excellent quality. To these articles of diet may be added the wild onion, rhubarb and parsnip, which formed an agreeable change from our daily rations. The Indians are very fond of the wild parsnip, and adopt a shrewd plan for getting a supply without the trouble of collecting it. The field-mouse is very common in this region, and before the winter sets in has constructed for himself a house, and filled it with the desirable root. Now all the Indian has to do is—to use the words of any interpreter—"Look for mouse-house; bimeby see little hill; Injun dig up little hill; ketchum plenty root; very good!"

To be fully appreciated by the native gourmand, it must be first boiled with fish or seal oil, and if molasses or sugar is obtainable, it is sweetened by the addition of one or both of these ingredients. With the native fondness of sugar, and, in fact, all saccharine substances, it is remarkable that they have never acquired the taste for salt. The river Indians do not eat salt with their food, and object to it with manifest repugnance when forced to eat such articles as bacon and ham.—*Youth's Companion.*

—"My young friend," said old Mr. Surplus to young Mr. Giddiboy, "did you not think that you were rash to ask my daughter to marry you when you are not able to support her?" "Well," said the young man, craftily, "perhaps I was. I admit my fault, and throw myself on your generosity, sir." "That's right," declared the old gentleman. "You shall not lose by it, I assure you. There, sir, is a nickel to pay your car fare home. No thanks, if you please. Good-day, Mr. Giddiboy."—*Chicago News.*

MR. ROWAN MADE RICH.

He Tells of His Recent Drawing in The Louisiana State Lottery.

One of the fortunate holders of the winning ticket that drew the capital prize of $300,000 at the last drawing of The Louisiana State Lottery was Mr. William Rowan, of 2023 South Third street, this city. His share was one-twentieth of the whole amount, or $15,000.

Mr. Rowan at the time of his good fortune was a ship charpenter employed at the St. Louis Sectional Docks, but has since retired, and is now engaged in no particular business. He said to a *Star-Sayings* reporter last night: "I have worked hard all my life, and now intend to invest my money in real estate, for myself and mother to live on."

He stated also that the money was turned over to him within six days after the drawing, and that he had no difficulty in securing it.

He added that it was several days before he learned of his good fortune, and that being away from home, every member of his family were looking for him in order to inform him of the fact of his having won part of the capital prize.

Mr. Rowan added that he has been buying lottery tickets ever since The Louisiana State Lottery has been in existence, which has been since 1868, when the capital prize was $9,000, and single tickets cost $2. He has had varying luck since he began patronizing the lottery, winning at rare intervals. His last winning was $15, which he received last Christmas.

He stated that he will continue to buy tickets as same as usual, in the hopes of striking the capital prize again, and added that he always buys tickets numbering between 15,000 and 60,000.

Mr. Rowan is one of 50 who always club together in buying tickets, thus securing 55 tickets for $50. The man who sends on for them gets the extra five, all taking turns in sending. No division of the prize is made, however, when one man of the 50 wins.—*St. Louis* (Mo.) *Star-Sayings*, Dec. 2.

THE LARGEST THEATRE IN AMERICA.

The "Orpheum" of San Francisco comes under this head, seating 2,500, with accommodations for 1,000 more. With attractive plays, handsome stars, fine music, magnificent scenery, new songs and all the latest theatrical features the "Orpheum" is nightly filled with interested auditors, who are more than pleased to get such a programme at low prices. Our readers must not fail to visit the "Orpheum" when in "Frisco."

In any case of seminal weakness, arising from any cause, Dujardin's Life Essence is a sure cure. It acts very quickly, and permanently cures. Two or three bottles have been often sufficient to cure even cases of long standing. Price, $1.50 a bottle. All druggists.

—The points of an oyster are first, the shape, which should resemble the petal of a rose leaf. Next, the thickness of the shell; a thoroughbred should have a shell like thin china. It should also possess an almost metallic ring and peculiar opalescent luster on the inner side. The hollow for the animal should resemble an egg cup.

—The following receipt for the cementing of wood and glass is said to have the advantage over many others in that it does not injure the most brightly polished hardwoods: Mix together some finely pulverized, well-dried zinc-white with clear copal varnish in such quantities as to produce a half-liquid preparation, spread this over the parts to be cemented, and it will be found that they will be joined firmly together.

—Fruit Biscuit.—One quart flour, three tablespoonfuls baking-powder, butter the size of an egg; mix with milk very soft and bake quickly; split in two or three parts; butter one of these parts; put on a layer of strawberries that have been a little crushed, with sugar; add a few spoonfuls of cream; lay on the other part butter and add another layer of strawberries. If the cake is in three parts make three layers of the berries. This is a good rule for any fruit cake.—*Albany Journal.*

—The feet can be kept warmer in cold weather by wearing a shoe with a light sole than a thick one. With the former the foot has a chance to work, thereby keeping up a circulation. This of course applies only when the weather is dry. But when it is wet and rubbers are necessary, it is better to wear a single-soled shoe inside. In the summer the thick sole should be worn, for it keeps the heat from striking through to the foot. This is all so contrary to the preconceived opinions of the public that it is doubtful whether it will receive much credence, but it is the fact all the same.—*Shoe and Leather Reporter.*

—"I tell you," said a traveling man to companion on the train, "you'll never catch me playing seven-up again with Bill Scriven." "Why not?" "Because I saw him turn up a jack off the bottom of the deck." "Well, I'd rather play with him than I would with Jerry Spader." "Why?" "Because when Jerry turns a jack off the bottom you can't see him do it."

ARE WE TO HAVE ANOTHER WAR?

Some political prophets aver that we shall. Be that as it may, the battle waged by medical science against disease will never cease until we arrive at that utopian epoch when the human family shall cease to be afflicted with bodily ailments. One of the most potent weapons which the armory of medicine furnishes, is Hostetter's Stomach Bitters, which is a special utility as a family remedy, as it is adapted to the immediate relief and ultimate cure of those disorders of the stomach, liver and bowels which are of the commonest occurrence. Indigestion, biliousness and constipation are inseparable companions, and these ailments are completely eradicated by the Bitters. But the remedial scope of this superlatively wholesome and genial medicine takes in also nervous ailments, rheumatism and kidney troubles; its action in these, as in the other complaints, being characterized by unequaled thoroughness.

Whether the play is bright or flat,
To him it is never known
Who stares at the back of a lady's hat,
And groans as the acts go on.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLane's Celebrated Liver Pills, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

Jarvis—How true the proverb is that a man is what his wife makes him. Jarvis—And how true it is, too, that a man does what his wife makes him.

A MODEST, SENSITIVE WOMAN

Often shrinks from consulting a physician about functional derangement, and prefers to suffer in silence. This may be a mistaken feeling, but it is one which is largely prevalent. To all such women we would say that one of the most skillful physicians of the day, who has had a vast experience in curing diseases peculiar to women, has prepared a remedy which is of inestimable aid to them. We refer to Dr. Pierce's Favorite Prescription. This is the only remedy for woman's peculiar weaknesses and ailments, sold by druggists, under a positive guarantee from the manufacturers, that it will give satisfaction in every case or money refunded. See guarantee printed on bottle wrapper.

An example of retributive justice has just come to notice. A girl who recited "Beautiful Snow" was hit behind the ear with a large, solid ice-ball.

Try Germea for Breakfast.

SELF-PLAYING MUSICAL INSTRUMENT. Plays Classical, Sacred, Dance, and all popular music correctly. Price, $8 to $275. Write KOHLER & CHASE, San Francisco, for catalogue.

PISO'S CURE FOR CONSUMPTION

New York city has just determined a walking match and Washington will have one March 4th.

With groans and sighs, and dizzied eyes,
He sacks the couch and down he lies;
Nausea and faintness in him rise,
Brow-racking pains assail him.
Sick headache! But ere long comes ease,
His stomach settles into peace,
Within his head the throbbings cease—
Pierce's Pellets never fail him!

Nor will they fail anyone in such a dire predicament. To the dyspeptic, the bilious, and the constipated, they are alike "a friend in need and a friend indeed."

Mrs. B. M. Corsett of Baltimore has been appointed to a $900 clerkship in the Pension Office. The bustle must go, but the Corsett may stay.

A Sore Throat, Cough, or Cold, if suffered to progress, results in serious pulmonary affections, oftentimes incurable. "*Brown's Bronchial Troches*" reach directly the seat of the disease, and give instant relief.

There is no real objection, after all, to having men go out between acts at the theater. The objection is to having them come back.

Don't hawk, hawk, blow, spit, and disgust everybody with your offensive breath, but use Dr. Sage's Catarrh Remedy and end it.

First lady—What an imperious, dictatorial, arrogant man that Mr. Pompus is! Second lady—Yes; you know, he has never been married.

417 Sansome Street, San Francisco, Cal.

CUTTING DOWN.

At this season of the year every successful merchant overhauls his stock to find out the amount of his gains or losses, and, learning where he is overstocked, tries to reduce it by reducing prices, forcing sales, even at a loss sometimes. This has to be done, and we do it cheerfully. We are offering Ladies' Vests, in size 30, 32 and 34 only, 44c each; worth fully 75c, and some $1. Children's Stockings, up to 7 or 8 inch, very fine quality, at 20 to 25 cents; worth double the money. Men's Cotton Half-Hose at 8c a dozen; you would call them cheap at $1.25; extra fine at 25c; good value at 50c; we have too many. Wool Half-Hose from 20c a pair up. Handkerchiefs for children at 20c and 25c per dozen; for ladies, 4c, 5c and 7c per dozen; with border and nice, fine embroidered at 10c, 12c and 25c, that you would call cheap at twice the price. Silk handkerchiefs for boys or girls, men or women; white or figured, at 25c to $1.25. In wall-paper we sell at 12½ to 20c what would surprise you; new designs and good quality. A few nice books for little children, sold at 25c before Christmas now offered at 15c. In the fruit room we offer tons of French Prunes at 5c for which we used to get 10c; peaches at 5c that brought 12c and 15c last year. Our January list is ready, and we will send it to you a whole year for $1. Sample copies for nothing. Ask for it if you have not had it lately. Smith's Cash Store, No. 418 Front Street, San Francisco, Cal.

DR. PIERCE'S NEW BELT AND SUSPENSORY.

(Pat. Oct. 11, '87) cures all Nervous and Chronic Diseases of both sexes. Price $6 and upward. Send 2c for sealed pamphlet No. 2. RUPTURE. If ruptured send stamp for Pamphlet No. 1. PILES. New Invention Send 2c stamp for Pamphlet No. 3. Address: M. L. T. Co., 704 Sacramento St., San Francisco, Cal.

OVER 6,000,000 people believe that we pays best to buy Seeds of the largest and most reliable house, and they use

Ferry's Seeds

Earliest Cauliflower in existence.

D. M. FERRY & CO. are acknowledged to be the *Largest Seedsmen* in the world. D. M. Ferry & Co's Illustrated, Descriptive and Priced SEED ANNUAL For 1889 Will be mailed FREE to all applicants, and to last year's customers without ordering it. *Invaluable to all.* Every person using Garden, Field or Flower Seeds should send for it. Address

D. M. FERRY & CO., Detroit, Mich.

The BUYERS' GUIDE is issued March and Sept., each year. It is an encyclopedia of useful information for all who purchase the luxuries or the necessities of life. We can clothe you and furnish you with all the necessary and unnecessary appliances to ride, walk, dance, sleep, eat, fish, hunt, work, go to church, or stay at home, and in various sizes, styles and quantities. Just figure out what is required to do all these things COMFORTABLY, and you can make a fair estimate of the value of the BUYERS' GUIDE, which will be sent upon receipt of 10 cents to pay postage. MONTGOMERY WARD & CO. 111-114 Michigan Avenue, Chicago, Ill.

The OLDEST MEDICINE in the WORLD is Probably Dr. Isaac Thompson's CELEBRATED EYE WATER

This article is a carefully prepared physician's prescription, and has been in constant use for nearly a century, and notwithstanding the many other preparations that have been introduced into the market, the sale of this article is constantly increasing. If the directions are followed it will never fail. We particularly invite the attention of physicians to its merits. Jas. I. Thompson Sons & Co., TROY, N. Y.

ARM & HAMMER BRAND

To Housekeepers and Farmers.—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons, which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole raising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba, etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK

ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound packages full 12 ounces net, Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

SODA OR SALERATUS

THE ONLY DYES Brilliant Durable Economical

Are Diamond Dyes. They excel all others in Strength, Purity and Fastness. None others are just as good. Beware of imitations—they are made of cheap and inferior materials and give poor, weak, crocky colors.

36 colors; 10 cents each.

Send postal for Dye Book, Sample Card, directions for coloring Photos., making the finest Ink or Bluing (10 cts. a quart), etc. Sold by Druggists or by

WELLS, RICHARDSON & CO., Burlington, Vt.

For Gilding or Bronzing Fancy Articles, USE DIAMOND PAINTS. Gold, Silver, Bronze, Copper. Only 10 Cents.

Be sure that there is a picture of a *Cow* on your package and you will have the best Soda made.

THE COW BRAND.

BEHOLD

I am the Spirit of Health,

And my message is to the Sick. I crown with a fadeless wreath, those who obey my laws and avail themselves of my counsels. The flowers that I give do not wither, and the fragrance of my roses is perpetual. I bring BLOOM to the cheek—STRENGTH to the BODY—JOY to the HEART. The TALISMAN with which I work never fails. Vast numbers have felt its power, and testified to its virtues. It is

DUJARDIN'S

LIFE ESSENCE!

This wonder of modern chemistry is pronounced to be unequaled for its power of replenishing the vitality of the body, by supplying all the essential constituents of the Blood, Brain and Nerve Substance. After taking the Life Essence the nervous symptoms disappear, as well as the functional derangement. Sleep becomes calm and refreshing. At the same time the patent gains flesh, the features presenting a striking improvement; the face becomes fuller, the lips red, the eyes brighter, and the skin clear and healthy. The hair of the head and beard grows and acquires strength, as also the nails, showing the importance of the action of the medicine on the organs of nutrition. It gives back to the human structure in a suitable form, the lively, animating element of life which has been wasted, and exerts an important influence directly on the brain, spinal marrow and nervous system of a nutritive, tonic and invigorating character, thereby checking all wasting of the vital fluid and the more exhausting processes of life, maintaining that buoyant energy of the brain and muscular system which renders the mind happy, cheerful, brilliant and energetic; entirely overcoming that dull, inactive and sluggish disposition which many persons experience in all their action. Price $1.50 per bottle. For sale by all druggists.

LITTLE JOHNTS' CHRISMUS.

We got it up a-purpose, jes' fer Little Johnts, you know;
His mother was so pore and all, and had to manage so—
Jes' bein' a war widder, and her pension mighty slim,
She'd take in weavin', er work out, er anything fer him.

And little Johnts was puny like—but law! the nerve he had!
You'd want to kind o' pity him, but couldn't, very bad—
His pants o' army blanket and his coat o' faded blue
Kep' hintin' of his father like, and pity wouldn't do!

So we collogued together one't, one wintertime, 'at we—
Jes' me and mother and the girls, and Wilse, John Jack and Free—
Would jine and get up little Johnts, by time 'at Chrismus come,
Some sort o' doin's, don't you know, 'at would su'prise him some!

And so, all on the quiet, mother she turns in and gits
Some blue janes—cuts and makes a suit; and then sets down and knits
A pair o' little galluses to go 'long with the rest—
And puts in a red flannen-back and buckle on the vest.

The little feller be'n so much around our house, you see,
And be'n such a he'p to her and all, and handy as could be,
'At mother couldn't do too much fer little Johnts—No, sir!
She ust to jes' declare 'at "he was meat and drink to her!"

And Piney, Lide and Madaline, they watched their chance and rid
To Fountaintown with Liddjey's folks; and bought a book, they did,
O' fairy tales, with pictur's in; and got a little pair
O' red top boots 'at John-Jack said he'd be'n a pricen there.

And Lide got him a little sword, and Madaline, a drum;
And shootin' crackers—lawzy-day! and they're so dangersome!
And Piney, ever' time the rest would buy some other toy,
She'd take and turn in then and buy more candy fer the boy!

Well, thinks-says-I, when they got back, your pocket books is dry!—
But little Johnts was there hisse'f that afternoon, so I—
Well, all of us kep' mighty mum tel we got him away
By tellin' him be shore and come to-morry—Chrismus day—

And fetch his mother 'long with him! And how he scud acrost
The fields—his tow head, in the dusk, jes' like a streak o' frost!—
His comfert flutterin as he run—and old Tige, don't you know,
A-jumpin' high fer rabbits and a-plowin' up the snow!

It must a be'n most ten that night afore we got to bed—
With Wilse and John-Jack he'ppin' us; and Free man in the shed,
And Lide out with the lantern while he trimmed a Chrismus tree
Out of a little scruboak top 'at suited to a t!

All night I dreamp' o' hearin' things a-skulkin round the place—
And "Old Kriss," with his whiskers off and freckles on his face—
And reindeers, shaped like shavin' hosses at the cooper shop,
A-stickin' down the chimbly, with their heels out at the top!

By time 'at mother got me up 'twas plum day light and more—
The front yard full o' neighbors, all a-crowdin' round the door,
With Johnts' mother leadin'; yes, and little Johnts hisse'f,
Set up on Freeman's shoulder, like a jug up on the shelf!

Of course I can't describe it when they all got into where
We'd conjered up the Christmas tree and all the fixin's there—
Fer all the shouts o' laughture—clappin' hands and crackin' jokes,
Was heap o' kissin' goin' on amongst the women folks:

Fer lo-behold-ye! there they had that young un—And his chin
A-wobblin' like; and, shore enough, at last he started in—
And—sich another bellerin', in all my mortal days
I never heerd, er 'spect to hear, in woe's app'inted ways!

And mother grabs him up and says: "It's more'n he can bear—
It's all too sudden for the child, and too su'pris in'l—There!"
"Oh, no it ain't"—sobbed little Johnts—"I ain't

su'prised—but I'm
A-cryin 'cause I watched you all and knowed it all the time!"

—James Whitcomb Riley in Christmas Book Buyer

The Wrong Name.

One road leading out of Burlington has four milkmen living on it, and The Free Press of that city says there is some talk of changing the name of it to the milky way It is rather remarkable that the road aforesaid has not already been christened a water route.—Norristown Herald.

Hadn't on His Company Manners.

"Bobby," cautioned his mother (they were guests at dinner), "is it possible you are eating with your knife?"

"Yes, ma," responded Bobby, with a look of intense chagrin, "but I forgot I was visitin'."—Harper's Bazar.

OF GENERAL INTEREST.

—A thread has been made from the fiber of the common nettle so fine that sixty miles of it only weighed two pounds and a half.

—Those born in spring are generally of a more robust constitution than others. Births are more frequently by night than by day, also deaths.

—A man at Laramie laughed at an Indian who slipped down on the street five years ago, and the other day the red man came around and stabbed him in the back as a reward.

—A Tampa, Florida, orange grower experimented in a small way with packing oranges in dry sand, and finds that some thus treated have kept as fresh as if just picked for a year.

—A workingwoman's society in Detroit, formed ten years ago to take care of girls unemployed, and get them work, has so thrived that it recently dedicated a fine building for its purposes.

—Under the laws of Canada if you are renting a house and it burns down you are holden to the owner for its full value. If it is blown down by the wind or carried away by a freshet he must pay you full damages.

—Southern Michigan folks who yearn for cheap living may slip over the Indiana line and find a restaurant at South Bend where the "corn bread" is made of basswood sawdust and corn starch. "It is fillin', but not fattenin'," as the old Irish lady said of the water she fed the pig an hour before she sold him.

—A resident of Hartford, Conn., was on his bicycle the other day spinning along a country road, when a red squirrel darted from the woods and attempted to cross the road in front of him. The little fellow was just in time to get caught by the big wheel, which, curiously enough, took him up into the slot under the seat and crushed the life out of him.

—A small boy recently found a fine topaz on the Bald Face mountain in Chatham, N. H., and sold it for a small sum to a man who realized $60 for it after it had been cut and polished. Several others of less value have been found in the region, and they are mostly white. So close is the resemblance to diamonds, it is said, that only an expert can tell the difference.

—Down in Maryland the other day when Dr. Fulton married Miss White the ring used was made of a gold button that was on the wedding gown of the bridegroom's mother, and a marvelously tattered shoe was sent by an old darkey, along with the information that it was one of the last pair that "master," the bride's father, bought for him in slavery times, and so he wanted it flung after young mistress to insure her good luck.

—A well-known fish culturist, has been making some very interesting experiments with the microscope which prove that there are 9,000,000 eggs in an eel. How and when these eggs are hatched has always been, and still is, a mystery. All that is known definitely is that the eels run down to salt water in October, and that in the spring swarms of young ones, the size of a darning-needle and about two inches long, ascend the rivers.

—A colored man was arrested in Memphis the other day who might well be called a peripatetic junk shop. When he was searched at the station house something more than a peck of odds and ends were found in his pockets. He had a razor and full shaving outfit, several combs, a looking-glass, four pocket-handkerchiefs, a gimlet, a brad awl, two pocket knives, a copy of the "Biblical Reason Why," two pipes, a jewsharp, three fiddle strings, a chunk of rosin, two lumps of beeswax, three red flannel rags, a plug of navy tobacco and divers other articles.

—The Melburne *Argus* relates that a year ago an English laborer, unable to find employment, decided to emigrate to Australia, leaving his wife at home. Finding a girl whom he loved, and who returned his attachment, he was honest enough to confess that he had a wife at home. The girl wrote to her rival offering to buy her husband from her. The wife consented to sell him for $100. After a few months the money with a paper arrived by which she was to renounce all her rights in her husband to the girl. The paper was duly signed and sent back. After its arrival the happy couple in Australia were married.

Extremely Suspicious.

Mr. Larkie is always full of extraordinary good nature when he has been drinking. Even his wife has noticed this. The other evening he had been out late with some friends, and the cup that cheers had gotten in some pretty effective work. As he stood under an illuminated sign, a very battered looking man came up to him and said:

"Mister, would you mind giving a fellow a quarter?"

"Whaffor?" asked Larkie.

"Well, to be dead honest with you, I want it to get a drink with."

"G'way," said Larkie; "I doan believe ye."

"You don't believe me!"

"Nosshir. Jes as shoon's ye git (hic) the money you'll go round the corner an' waste it fur bread."—*Merchant Traveler.*

—The electrician is somewhat slower in his conquests in Europe than in America. Electric lights have but lately been supplied along Berlin's famous street, Under den Linden, and the young Emperor finds much delight in watching the weird shadows under the lime trees.

PHILOSOPHER DUNDER.

He Gives His Reasons for Deciding Not to Become a Great Man.

"Shildrens, let me told you somethings. I vhas an oldt mans, und I knows petter ash you. If you want to haf some fun und be happy doan' try to be great. I don' pelief dot vhay when I vhas a poy, und so I lay oop sorrow for myself.

"You haf all heard of Napoleon Bonaparte. He vhas a great Sheneral. He can lick all Europe mit one hand tied behind his back. He vhas der greatest man for a hundred years. Some peoples was so afraid of him dot dey shump in der rifer, und some like him so dot dey sit oop nights to hurrah. Maype dot looks awfully nice to you, but how vhas she. Dot Bonaparte can ne er go in a tobacco store and play sheckers mit a fireman. He doan' haf no time to go on a picnic. He nefer sees a game of base-ball. He doan' haf some fun mit der boys at ward caucus. All he does vhas to plan some fights und knock eafery body into der middle of two weeks ago. Take him for ten years und he doan laugh once. He vhas great, but does dot pay? Where vhas der fun—der benefits?

"Some poys cry pecause dey vhas not Sheorge Washington. Maype it looks awful nice to be President und a Sheneral, und to swell around und boss eafery body, und to haf your name in der papers, but you hold on. Do you pelief Sheorge Washingtons eafer haf some fun mit der poys? Does he eafer steal some apples, carry off somepody's gate, or hook sugar from der pantry, und nopody dares slap him on der back und call him oldt mans, und nobody dares ask him to shlip his ticket. He must shust be a big gun und keep quiet und comb his hair tife times a day.

"Maype some of der little gals vas mad pecause dey won't nefer be Queen of Spain. A Queen has nice dresses, und she haf some quails on toast eafery day, und if she says she wants this or that she can haf him. When she rides out eafery pody shmiles und bows und cheers, und if she was seek der papers come out eafery hour. Dot looks nice, but hold on a little while. If you vhas Queen you can't play tag mit der poys, you can't eat some peanuts nor chew gum, you can't put on an old dress nor wear some old shoes, und if you go to a picnic you can't eafen fall oafer a log and skin you nose. How it would look for a Queen to stand out by her gate und gossip mit Mrs. Blank about dot new neighbor and her nine cats! If her husband comes home late she can't say one word und if she goes by der kitchen der hired girls bounce her out. She must sit oop very straight, und look very solemn, and if she looks out of der window und a poy falls down she can't eafen shmile. If you want some comforts in dis world doan' you be some Queens.

"I shust like to be as I am und like I vhas. If some man calls at my house he takes off his hat und says my wife vhas looking petter ash she vhas, und dot we vhas hating sooch bad weather as he nefer sees pefore. Vhen a man comes in my place of peesness he says: 'Hello! Dunder, vhas he cold enough for her? How vhas your left lung today anyhow?' I can laugh at him, or I can poke him in der ribs, or I can tell him to go by Halifax. Dot makes me happy, und I grow fat some more. If I vhas sooch a great man dot I haf to hold my legs stiff as crowbars und my backbone like a gate post, und say 'um!' und 'ha!' und go py der barber once a day, I vhas so seek und tired dot I run away from myself. When I vhas who I vhas I can wake oop in der morning und box Shake's ears, keek my dog out doors, shmile on my wife, und go down town und feel dot I like to stay in Detroit ten hoonered years."—*Detroit Free Press.*

ABUSING HORSES.

Offenses of Which Only Fools or Tyrants Are Guilty.

It seems to be natural for some men to always be thumping and abusing the horses which they handle. In fact, such work is practiced by some to such an extent that their horses think there is something wrong if they are not slashed or jerked around all the time, and scarcely know what to do with themselves when they are placed in the hands of men who know how to manage horses that have been properly trained without abusing them. To say the least, these abusive methods are shameful and needless, and are only practiced by those who know but little or nothing about horsemanship. The idea prevails among this ignorant class of men that without this rough treatment they could not manage their horses. This is one of the greatest errors that men who handle horses can fall into. If a horse has any habits that make him unpleasant to handle they should be thoroughly broken up at once, after which there will be no cause for further trouble. An hour's work well directed will remedy the worst fault in the training of almost any horse, and it is better to take the time, should it require a whole day, to break up habits that are annoying than to let them run along during the whole life of the animal. Whenever you see a man who is continually fighting his team you can set him down as a fool or a tyrant. If he is the first he hasn't sense enough to know how to treat his horses. If he is the second he is abusive because he has the power to show his evil disposition and the poor brutes can not resist him.—*National Stockman and Farmer.*

—What color is a field of grass when covered with snow? Invisible green.

A CLEVER SWINDLE.

How a Russian Confidence Man Victimized Two Tradesmen.

An ingenious stroke of business has been done by a swindler who is now being sought for by the Moscow police. A young man of respectable appearance recently entered a jeweler's shop, selected 4,000 roubles' worth of trinkets, paid down a sum of 500 roubles on account, took the jewelry and explained that if an assistant would accompany him to the neighboring office of a well-known wholesale baker the balance of the sum due would be at once handed over. The baker in question was in the habit of contracting for supplying large establishments with bread; and as he was notoriously a wealthy man, an assistant was allowed to accompany the adventurer to his house. Of course the swindler had already visited the baker and made him an innocent accomplice. On entering the office the adventurer said to the baker in an off-hand way: "This man will take the 3,500 that you have arranged to let me have. He has had 500 roubles from me. Please take his receipt and oblige me by attending to him quickly. I must be off. Good day!" The baker's reply was a respectful "Certainly, sir; good day." He told the assistant to sit down a few minutes, and in the meantime the swindler vanished. When at last the baker, after listening at various tubes and making his replies, announced: "The bread is ready for you now. How many carts have you to carry it in?" for the first time it dawned upon the victim that in certain circumstances "3,500" might allude not to roubles, but to loaves. The swindler had, in fact, pretended to be the director of an orphanage, and had intimated that twice a week until further notice he should require 3,500 loaves, and that the man who would periodically call for them would also pay for them in ready money.—*Chicago Journal.*

THE ROUTINE WAY.

Small Essentials That Are Very Necessary to Home Comfort.

It is very easy to take care of the picturesque part of housework—to arrange the flowers and the pictures in the parlor and the china in the dining-room and the bright tins in the kitchen. But it is a vastly more laborious matter to attend to the daily routine of the household in those matters that do not appeal to the taste or the imagination—to watch servants, and yet not appear to watch them, or to guard against the sources of contamination and uncleanliness which are forever cropping up even in the most carefully cared for household. The secret of perfect housekeeping lies chiefly in routine and system, and they mean drudgery. It has been said of old that new civilizations are less governed by routine methods than old established nations. Law and order in pioneer colonies are apt to be under mob sway, and from the housekeeping of a government the family housekeeping takes its pattern. As a rule, American households are hardly yet amenable to the strict routine system of the British household. This is due in part to the servant question, but again, the difficulties of the servant question in this country are due to the want of system in the matter of references, given and received. For the comfort of every individual in the household, it is necessary that the hours of rising and for meals should be regular. It is one of the small essentials very necessary to universal comfort. Servants should have their certain duties to perform at certain hours, and should be made to understand that they should be performed at the time given and not at another time. The washing should have its set day as is the common rule, and the ironing should be done and folded by a certain time in the week, making allowance in the time given for delays caused by stormy weather so that no excuse of storms or other hindrance should set it back beyond the limit given. This can easily be done. Two regular baking days should be set apart in the week, as also regular sweeping days and days for cleaning windows and brushing blinds, and for scrubbing kitchen closets and floors and cellar. Housekeepers should arrange that the table is cleared and the dining-room dusted after each meal and before a certain hour. If it is clearly understood by the maid of all work or the kitchen maid that the dining-room must be swept, cleared and dusted before nine o'clock in the morning, she will easily drift into this order and hardly realize that she is working under routine. An immense amount of work is lost by a servant's flying from one object to another or beginning one piece of work before another is accomplished. Thorough system will abolish this and servants themselves will early find that they have more leisure on their hands by doing their work in an orderly manner. As a rule, in families where such a system is instituted, servants remain a longer time and in greater content than in an easy-going household where matters slide in a slipshod way.—*N. Y. Tribune.*

—There was a man at the Central Market yesterday showing off a new-fangled wagon-jack, and a colored man who was there with his horse and wagon seemed much pleased with it until he found that the price was a dollar. "Dat settles me," he said, as he climbed into his vehicle. "But it's worth the money," persisted the agent. "I's got a cheaper thing, sah." "What is it?" "Why, my ole woman kin hold up to eand of dis wagin while I grease de axes, an' it doan' cost me a cent extra."—*Detroit Free Press.*

EDUCATED FARMERS.

The Value of a Business Training to the Agriculturist of To-day.

"Where are you going to school this winter?"

"To some good business college."

"O, then you are going to fit yourself for a position in some business office?"

"Not at all; I have no desire to enter into business."

"What *do* you intend to do, then?"

"I intend to stay on the farm!"

"But what good is your business education going to do you there?"

"It's going to make a better farmer of me."

This conversation took place between two bright young farmer boys, and as their subject of conversation is a matter of interest to all other farmer boys, we will report the rest of the interview.

"I don't see how you make that out," was the response to the last observation.

"It is very clear to my mind," came the ready answer. "It seems to me that if any business on earth requires the thorough knowledge and practice of good business principles, that business is farming. Agriculture is not what it used to be. When farmers went to the blacksmith shop to have their plows made; when they raised nearly all they ate, and ate nearly all they raised; when they made their own clothes from wool that was grown on their sheep's back; when they manufactured their own farm machinery, and their greatest social event was to go to the circus once a year, there was then not so much need of a business education except as a stepping stone to getting into some other employment. But now things have radically changed. Every successful farmer is, to a certain extent, a merchant. He has much buying to do in order to equip his farm with the tools and machinery necessary for successful farming. Then he must sell his products and he must know how to sell to the best advantage. He must know what kind of farming is the most profitable, and to know this he must have an exact system of accounts. He must know how to protect himself against the tricks and traps of sharpers by a familiarity with all kinds of business forms and commercial papers, and a fair understanding of the laws of business will come very handy. He ought to be a ready penman and a good correspondent, quick and accurate in business calculations, and even a knowledge of short-hand won't do him any harm.

"You see now my ambition. I want to be a business farmer. I am going to try to make the farm profitable by giving it as close attention as the merchant does to his business. I shall try to increase the profit account by decreasing the waste account, and all my business transactions with the outside world will be recorded under a clear system of debit and credit."

"I believe you are right—in fact, I know you are, and when you select your school let me know so that I can go with you. Perhaps when you get your farm well under way I'll start a competing establishment, and we'll see who is the best business man and consequently the best farmer."—*Western Plowman.*

JAPANESE FARMERS.

Skilled Manipulators of Ivory and Wood Working for a Mere Pittance.

An ivory carver sat in his little room, open to his little garden, chiselling upon a magnificent tusk from which the form of a graceful female figure was just emerging. The ivory he held between his knees, while his tools were all spread out by his side. "How long will this take you?" asked the correspondent. "About four months," he replied. And what is the proportion between the value of the material and the value of the labor in such a work as this when completed?" "I paid $140 for this piece of ivory, and four months' work at $50 a month is $200. Total cost about $350."

Fancy one of the most skillful and original artificers in the world—for this man's ivories are admired everywhere—simply estimating his own labor at fifty silver dollars a month, while at home our great painters do not hesitate to ask a thousand guineas for a picture covering a few square feet! Is there doubt which is the true temperament of the artist? "Are you not very sorry sometimes to part with one of those works that has been your companion and part of your life for so long?" He looked up for a moment at a big white lily nodding above him in the garden and then gently shook his head. "No," he said; "Condo no watto migoto no tsumori de gozaimasu—I expect the next will be more beautiful."

The wood carver, seated with a dozen apprentices among his fragrant litter, knew that we were coming, and presented us each with a large sugar-figured cake in a pretty box. Yet "I am very poor," he said with a smile, "for wood carving is out of the fashion now. Nobody builds beautiful Japanese houses any more." He had just been so fortunate, however, as to get a commission for a number of pierced ventilating friezes for the new palace, the one of these he showed to us nearly completed—an exquisitely graceful design of flowers and flying storks. If rich English and Americans only knew for what trifling sums such a man as this would produce for them carved woodwork for their mansions, far more beautiful than they could get elsewhere for ten times—yes fifty times the cost—he would not be poor long.—*Tokio Cor. Philadelphia News.*

MISCELLANEOUS.

—Poverty is like a love affair—a good joke after it is over.—*Merchant Traveler.*

—It is a matter of economy as well as mercy to properly mate horses that have to work side by side.

—According to a Chicago wagon-maker, white oak requires eighty years to mature; shellbark hickory, from thirty to fifty years; white ash, fifty years; tulip trees, sixty or more years, and red or Norway pine, at least sixty years.

—A Kalamazoo girl was engaged in a public gum chewing contest at Minneapolis, and after an exhibition of rapid chewing her jaws "set." She become almost frantic and rushed off to a physician, who discovered that some of the muscles of her jaws were paralyzed. In a short time the trouble passed away, but she declares she has no further use for gum.

—A regulation has been adopted in the Michigan State prison by which hereafter convicts may earn the right to wear plain gray suits instead of the prison stripes. Men who obey the prison rules for six months may discard the stripes; but if after that period they become unruly again they must once more don the objectionable clothing.

—The law does not apply.—"I just think the authorities ought to send that Persian Minister back, so I do," remarked Mrs. Snaggs. "What's the matter now?" asked her husband. "Why, not long ago they fined a London minister $1,000 for coming to this country, and here they let a Persian Minister come in without saying a word. I expect he's not orthodox, either."—*Pittsburgh Chronicle-Telegraph.*

—Tom (to borrower)—"I say, Dick, I've made a bet with Harry and you are the only one who can keep it. Once upon a time, you know, Douglas Jerrold was asked by an acquaintance if he had the courage to lend him a guinea, and Jerrold replied that he had the courage but he hadn't the guinea. Now, I have always believed that you would give me a different answer if I should ask you the same question, wouldn't you?" Dick—"Yes, I would." Tom—"So, I've won the bet. Can you accommodate me with the loan of a five?" Dick—"My dear boy, I've got the money, but I haven't the courage. O yes, Jerrold and I differ."—*Yankee Blade.*

—The Western papers speak of a man taking his private car and skipping for a journey of two or three hundred miles, as though it were a matter of every day occurrence. Such, indeed, is the fact. Private cars in Chicago are almost as common as yachts in New York. Every man, from the attorney of a railroad down through the boundless ramifications of its management until the clerks are reached, controls the movements of a private car to a greater or less degree. A Chicago railroad attorney will step into his own car and take a run down to Milwaukee in the most matter-of-fact manner in the world. It never occurs to him that he is doing an unusual thing, and yet to a New Yorker the performance seems based upon wealth in unrivalled magnitude.

—Misapplied Mythology.—"My dear, I have been reading up within the past week, and I think I have a name for our baby," said Mrs. Greening, as her liege lord emerged from his bath this morning. "You have, eh? What is it?" "I read that Phoebus, the god of day, comes up bright and beautiful in the morning; that he lights the world that without him ——" "Now, look here, madam; let's have no foolishness here. You can't call that child by any such name! Did Phoebus of history yell from 11 p. m. to 3 a. m. and intermittently from 3 to 7? I myself am doing the god-of-day business in the matter of getting up, and I'm not dividing honors. If you want a mythological prenomen for that destroyer of rest, I have it,' "What is it?' asked Mrs. Greening, with considerable asperity. "Aurora!" brutally yelled Elisha. Then he left the house.—*Detroit Journal.*

QUEER LOVE MAKING.

A Description of Courtship Among the Remote Tribes of the Kafirstan.

A Kafir, having fixed his affections upon some female, acquaints his parents with his intentions. They apply to the girl's parents, and if the latter do not consent to the union a fight is inevitable. If the parties agree the next proceeding is to appoint two expert female negotiators, who obtain access by strategem to the house with the object of broaching the subject to the young lady. They carefully avoid any sudden or abrupt mention of the awful subject of their mission, but launch out in praises of the man who seeks her hand. They speak of his possessions, his courage and accomplishments. The girl, pretending to be affronted even at these remote hints, grows refractory and runs away, tearing the ringlets of her hair as she retires. The female embassadors, having got the consent of the parents, drag her from her concealment and carry her by force to the house of her destined husband, and there leave her. She is compelled to live here several days, silent and dejected, refusing food till at last, if kind entreaties do not prevail, she is made to submit by blows to the union. The Kafir who has the reputation of having committed a number of murders of Mohammedans enjoys exceptional privileges; he is respected by all the neighborhood, and experiences little or no difficulties in procuring a wife. The Kafir woman is doomed to a life of toil and drudgery and the husband can discard her when ever he feels so disposed.—*Calcutta Gazette.*

BIRDS AS JUDGES.

Singular Spectacles Witnessed in England and Switzerland.

Rev. Dr. J. Edmund Cox has given the particulars of a trial by rooks which he witnessed between fifty and sixty years ago. He was riding along a quiet road in the vicinity of Norwich, England, when he was startled by sounds of an extraordinary commotion among the inhabitants of an adjacent rookery, Securing his horse to a gate, he cautiously crawled for a hundred feet or so, to a gap in the hedge of a grass field, to investigate proceedings. A trial by jury was seemingly going on. The criminal rook at first appeared very perky and jaunty, although encircled by about forty or fifty of an evidently indignant sable fraternity, and assailed by the incessantly vehement cawing of an outer ring, consisting of many hundreds, each and all showing even greater indignation than was manifested by the more select number. Even the scouts, although hovering about in all directions, were so deeply absorbed in the proceeding that they failed to notice their uninvited spectator. After a short time the manner of the accused was seen suddenly and completely to change; his head bowed, his wings drooped, and he cawed faintly, as if imploring mercy. The inner circle closed in upon him and pecked him to pieces in a few minutes, leaving nothing but a mangled carcass. The whole assembly then set up a tremendous screaming and dispersed; some seeking the adjacent rookery, but the greater number flying away across the fields. It is commonly known that rooks are addicted to pilfering, and that if the robber is detected the offender is punished. It has been noticed that young rooks will often pilfer twigs and other useful materials from the nests of their elders, with which to build their own domiciles quickly, and, although they are too cunning to be caught in the act, only committing their thefts when both the owners of the nest are absent, the robbery seems always to be known. When the crime has been discovered and proved eight or ten rooks are apparently deputed to act on behalf of the whole community; they proceed to the convicts' nest and in a few moments scatter it to the winds.

An Alpine tourist relates that during an excursion in the Swiss mountains he accidentally came upon a small secluded glen, which was surrounded by trees, and became the unexpected witness of a singular spectacle, About sixty or seventy ravens were ranged in a ring about one of their fellows, evidently reputed a culprit, and with much clatter of tongues and wings, were engaged in discussing his alleged delinquencies. At intervals they paused in order to permit the accused to reply, which he did most vociferously and with intense energy; but all his expostulations were speedily drowned in a deafening chorus of dissent. Eventually the court appears to have arrived at the unanimous conclusion that the felon had utterly failed to exculpate himself and they suddenly flew at him from all sides and tore him to pieces with their powerful beaks. Having executed their sentence, they speedily disappeared.—*Popular Science.*

TWO GREAT GERMANS.

General Sheridan's Meeting with Bismarck and Von Moltke.

I found him (Bismarck) wrapped in a shabby old dressing-gown hard at work. He was established in a very small room, whose only furnishings consisted of a table—at which he was writing—a couple of rough chairs, and the universal feather-bed, this time made on the floor in one corner of the room. On my remarking on the limited character of his quarters, the Count replied, with great good humor, that they were all right, and that he should get along well enough. Even the tramp of his clerks in the attic and the clanking of his orderlies' sabers below did not disturb him much; he said, in fact, that he would have no grievance at all, were it not for a guard of Bavarian soldiers stationed about the house, for his safety, he presumed, the sentinels from which insisted on protecting and saluting the Chancellor of the North German Confederation in and out of season, a proceeding that led to embarrassment sometimes, as he was much troubled with a severe dysentery. Notwithstanding his trials, however, and in the midst of the correspondence on which he was so intently engaged, he graciously took time to explain that the sudden movement northward from Bar-le-Duc was the result of information that Marshal MacMahon was endeavoring to relieve Metz by marching along the Belgian frontier.

Whenever anybody arrived with tidings of the fight we clustered around to hear the news, General von Moltke unfolding a map meanwhile and explaining the situation. This done, the Chief of Staff (Moltke) while awaiting the next report, would either return to a seat that had been made for him with some knapsacks, or would occupy the time walking about, kicking clods of dirt or small stones here and there, his hands clasped behind his back, his face pale and thoughtful. He was then nearly seventy years old, but because of his emaciated figure, the deep wrinkles in his face, and crow's feet about his eyes, he looked even older, his appearance being suggestive of the practice of church asceticisms rather than of his well-known ardent devotion to the military profession.—*General P. H. Sheridan in Scribner's.*

INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL.

SATURDAY FEBRUARY 16 1889

The eleventh volume of Alden's Cyclopedia of Universal Literature well sustains the high reputation the work has secured. Among the eminent authors of all ages and all nations contained in this volume are: William Henry Herbert, American naturalist and novelist. Herder, German poet; Herodotus, Greek historian; James Hogg, the Scottish "Ettrick Shepherd;" Holberg, Danish dramatist; Oliver Wendell Holmes, American poet and novelist; Houssaye, the French essayist, etc. These names simply illustrate the comprehensive character and general interest of the work, and are but a few of names included—for instance, besides these, Homer occupies over 50 pages, Thomas Hood, 15 pages, Wm. D. Howells, 13 pages, etc. The work is a veritable mine of literary riches, and there are very few published so well worthy of place in every home library. The price, so marvelously low, places it within popular reach—50 cents for cloth binding, 60 cents for half Morocco; postage 10c. A specimen copy can be ordered and returned if not wanted. JOHN B ALDEN, Publisher, New York, Atlanta, Chicago and San Francisco.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, FEBRUARY 16 1889

MAR RIED.

SCHALTEN—UHLEMEYER—At Big Pine, on February 6, 1889, by Rev. A., Clark. Mr. C. Joseph Schalten and Miss Emma Uhlemeyer.

BORN.

DEARBORN—At Lone Pine, February 12 1889, to Mr. and Mrs. H. L. Dearborn a daughter.

DIED.

GOODBURN—At Bishop, February 7, 1889, Carroll Goodburn, son of James and Martha Goodburn, aged 5 years, 6 mos and 4 days.

O. I. Mairs went to Bishop on Wednesday.

A $2,000,000 fire occurred in Buffalo, N Y., last week.

J. M. Horton, of Bishop, was in town this week.

Don't forget the G. A. R. Ball at Lone Pine next Friday.

J. J. Gunn and wife have returned from a visit to Darwin.

John Keegan was sick last Monday. He says it don't agree with him.

Snow is falling in the high Sierras. An excellent water season is now assured.

R. E. Barnes started for Mojave last Tuesday. He intends returning in a short time.

Arab, the fast trotting horse has been sold for $8,000 and will be taken to Massachusetts.

Thanks are due Mr. C. S. Swan for some fine Navel oranges which he brought up from Mojave

A Truckee man has been sent to the Stockton Asylum incurably insane from playing solitaire.

Mr. and Mrs. Ernest Hall were on Mondays train returning to Keeler from a visit to Virginia City.

Timothy grass with heads eighteen inches long is the kind that grows on Cashbaugh's place, at Bishop Creek.

Quite a number of town people are planning to go to Lone Pine for the 22d if the weather clerk is propitious.

A telegram was received from C. Mulholland Thursday afternoon, he having arrived at Mojave without delay.

The Rawson Ford ditch east of Bishop has been completed. It will irrigate several thousand acres of land.

The January pay-roll on the Comstock amounted to $233,374; this amount only including wages paid to operatives.

R. W. Scott, the Bishop jeweler, is in town with a stock of jewelry and watches. Give him a call at Blair's Drug Store.

Last Saturday Henry Melone shipped a carload of ore from the Montezuma mine, near Alvord. The ore is of good quality.

A lyceum has been regularly established at the M. E. church and good programmes are rendered every Friday evening. All are welcome.

H. M. Yerington will be in Los Angeles about the 6th of March on business connected with the extension of the C. & C. railroad to that city.

William Noonan, of Lone Pine, has gone to San Francisco. Billy has been sick for some time and has gone down for medical treatment.

Dr. S. A. Chapman, surgical dentist, is at the Norman House. Mr. Chapman is permanently located at Bishop and he will make occasional visits to Independence.

Miss Potter, of Boston, is visiting with the family of Geo. M. Gill. The lady is a sister to Mrs. Paul M. Bennet, of Stockton, formerly a resident of Independence.

The Silver Cornet Band has reorganized. Mr. John Rosewarne, under whose able instruction the boys formerly made good progress, has been re-engaged to teach them.

Harry Jiggens and C. S. Swan started on their second trip to Mojave with a big team. They were loaded with hides and hay. There will be over eight tons of merchandise awaiting them at Mojave.

Mr. W. O. Meroney is putting up a large and handsome building at Bishop Creek. The ground floor will be occupied as a store room. The second story will be fitted up as lodge rooms for the Masonic, Odd Fellows and other orders.

The land contest case between Wils. W. Yandell and Mary E. Sabine has been decided in the Interior Department in favor of the former. Patents have been issued for Homestead applications Nos. 166 and 169 (Indian).

Rev. E. McEvers will preach to-morrow (Sunday) at the school house at Lone Pine at 10:30 o'clock a. m., Sunday School at 11:30 a. m. At the M. E. Church, Independence, a 7 o'clock p. m. Sunday School at 11 a. m.

In a recent letter from Mr. Luce, at Swansea, he says: "Everything is opening fine. We have now uncovered blocks of marble that will measure about 4,000 cubic feet and how much still remains uncovered it is impossible to tell. These quarries will prove all I have ever claimed for them."

While on his way to Mojave last Tuesday Mr. C. Mulholland stopped at Cottonwood to water his team when the animals became frightened and lit out, leaving the wagon deposited against a tree. Mr. Mulholland secured a saddle horse and continued his journey. The horses came back to Lone Pine and were caught there.

At Big Pine on the 22d there will be a quarter-mile dash for two-year-olds, the following entries having been made: J. Counts names Owens Maid; V. G. Smith names Fox; James Lane names Billy the Kid; James Jones names Glasseo; R. P. Hessian names Big Pine. A match is proposed between Dandy Pat, Jesse James and Queen, a half mile. A grand ball will be given at Crocker's Hotel in the evening.

ENTHUSIASTIC MEETING.

A large and enthusiastic meeting was held at Bishop last Saturday. The subject of putting on teams to haul freight from Mojave was discussed at length. The meeting determined to organize a freighting company. It was evident that a very steady purpose filled the minds of all the people to persist in this movement. Resolutions were passed as follows:

WHEREAS, feeling that the time has come when some general and radical effort should be made by the people of Inyo county to counteract as far as possible the depressing influences now bearing down our every business interest, and

WHEREAS, the Carson & Colorado Railroad Company is now carrying grain from Sacramento to Keeler for twelve dollars per ton, while the product of Owens Valley is more than sufficient to supply the local demand, and at the same time for articles consumed by the farmers, and not produced in this county, impose a tariff of $60 per ton, thus threatening ruin to the most important business interests of the Valley, and bankruptcy to the entire community.

Resolved, that the time has now come when it is imperatively necessary for the community to combine for mutual protection and co-operation, that the threatened disaster may, at least, in a measure be arrested. Wherefore, be it further

Resolved, that we will, each and all, use our very best endeavors to procure the establishment of a daily mail and stage route between Bishop and Mojave via Big Pine, Independence, Lone Pine and all intermediate points, and to patronize the same exclusively.

Second—to establish and exclusively patronize a freight line consisting of teams between Bishop and Mojave and all intermediate points.

Third—That a freighting association shall be formed, which association shall contract to deliver, with dispatch, all freight offered at either terminus, or at any way point on said route, for a period of two years from date of contract, at a freight rate not in excess of the schedule rates hereafter to be agreed upon; and in all respects in strict accordance with the laws governing common carriers.

Fourth—That all importers and exporters of Inyo county freight, becoming parties to said agreement, shall oblige themselves to ship all their freight on this route ONLY, and to pay schedule rates for the same.

Fifth—That all users and consumers of goods, wares and merchandise who may become parties to this agreement, shall also in like manner obligate themselves to purchase all their imported goods from parties patronizing exclusively said freight and stage line, and to purchase only such goods as shall be brought into this county by such freight or stage line.

Sixth—That the said freighting company and stage line shall obligate themselves to purchase all necessary provender for their teams from residents of this county, and who are also parties to this agreement, provided that said stage line or freight line shall not be bound to purchase such provender from said parties when prices for same shall exceed the schedule rate hereafter to be agreed upon. And be it further

Resolved, that the penalty for a violation of said agreement shall not be more than fifty dollars in addition to double the value of the goods so shipped or purchased in violation of said agreement. Wherefore, be it further

Resolved, that in order to consummate these several objects in the most speedy and effectual manner a committee consisting of seven persons shall be appointed which committee shall be, and is hereby authorized to prepare articles of agreement in accordance with the foregoing; to fix schedules of freight and prices of provender, as part of said agreement; to procure all necessary signatures to the same and to assess and collect from the persons signing said agreement a sum sufficient to reimburse them, or any of them, for any expenditure of money necessary in the performance of the duties imposed upon them by these resolutions. Further, to confer with other parties or committees authorized to act in the furtherance of these several objects.

Resolved, that it is the sense of this meeting that the several interests shall be fairly represented on any committee or board of management to be hereafter appointed for the furtherance of these objects or for the general management of the interests of the parties.

Fine Grape Country.

Along the line of the new canal from the lakes west of Bishop a great deal of vineyard will be set out this spring. There is very little doubt that there will be a region where wines of the very finest sort will be produced. Already the canal is so far advanced as to make sure of carrying water to many hundreds of acres of fine vineyard land as soon as settlers are ready to use it. Many thousands of cuttings of the finest varieties of wine grapes are ordered for immediate setting out and still more will be ordered as fast as ground can be prepared.

Poisoning.

The dog fiend is again at work. Some contemptible coward has again been putting out poison, an imported hound belonging to W. S. Enos being found dead this morning. The dog was imported from England when a pup and is the last of a number brought to the county by Mr. Enos two years ago. The dog has been around Mairs' butcher shop for some time past and bothered nobody. The person who did it should be treated to a dose of San Quentin. If dogs are a nuisance notify the owners or shoot them. Don't be a coward and put out poison where anything may get it.

Pest Exterminators.

The State Inspector of Fruit Pests gives the following recipe for disinfecting grape cuttings: Bisulphide of carbon vapor. Get a perfectly tight tin lined box; put the cuttings in; place in the box a foot higher than the cuttings a saucer filled with the bisulphide; close the box and leave them in twenty minutes. The vapor being much heavier than air will sink down. For young trees use dipping in whale oil soap from the Arctic Soap Works, California St., S. F., 1 lb. to gallon of water.

Inyoites Aroused.

A mass meeting of citizens of Inyo county was called to meet yesterday at Bishop. The people are determined to find a way out of their valley by way of Mojave. Experimental trips have already been made with stages and freight wagons. They now propose to unite and form permanent lines. The distance to Mojave from Keeler is only 121 miles.—*Enterprise*

Entitled to the Best.

All are entitled to the best their money will buy, so every family should have, at once, a bottle of the best family remedy, Syrup of Figs, to cleanse the system when costive or bilious. For sale in 50c and $1 00 bottles by all leading druggists.

A letter received from Mr. W. McClelland, of Honey Lake, states that he will soon be in the valley with a carload of apples.

Continuing the Work.

The people of Bishop Creek, at a public meeting, resolved to have a membership in the Southern California Chamber of Commerce. They selected as their representative Mr. C. Mulholland, of Independence. He started for Los Angeles last Monday afternoon, going as far as Lone Pine that day and next day continuing his journey to Mojave by wagon. Everybody in Owens Valley now clearly understands that in Los Angeles is the proper place to make known the resources of the country and to look for settlers who want to get cheap land and make homes in a fine climate. The recent visit of Messrs. Enos and Mulholland to Los Angeles as delegates from Inyo county was very successful in drawing attention to the country. A knowledge of this fact led the people of Bishop to send Mr. Mulholland back to Los Angeles to continue the work. The new Chamber of Commerce now being organized at Los Angeles will be a powerful means to promote the welfare of all the counties interested, including San Diego, Los Angeles, Santa Barbara, Ventura, Kern, Inyo and San Bernardino. These counties will now be joined in a league that will secure concert of action on all matters pertaining to commerce, transportation, colonization and other subjects in which we all are interested. If wisely conducted such an organization is certain to be of as much benefit to the people of all these counties as are the various Trusts, Corporations, and other combinations made by capitalists for the promotion of their interests. This league is formed for the good of all and in this differs very widely from the Trusts etc., which are only formed for the benefit of the few at the expense of the many.

Mr. Hugh McCrum, of the firm of Stoufe & McCrum, the oldest wholesale liquor dealing establishment on the Coast, has visiting through the valley during the week. Mr. McCrum is a wealthy man and his trip here was for the purpose of seeking investment.

A comic valentine was received at this office Thursday morning bearing the Lone Pine post-mark with a $5 greenback enclosed in the same envelope. This may have been intended to take the "cuss" off, but if you've got any more of the same kind, boys, send 'em right along.

NEW ADVERTISEMENTS.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

LOCATION OF PRINCIPAL PLACE OF business, San Francisco, California.

Location of works, Keeler, Inyo County California.

Notice is hereby given, that at a meeting of the Board of Directors, held on the 1st day of February, 1889, an assessment of five cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the company, 205 Front St, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on Friday, the 15th day of March 1889, will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on MONDAY, the 8th day of April, 1889, to pay the delinquent assessment, together with cost of advertising and expenses of sale. By order of the Board of Directors.

G. W. LUCE, Secretary.

Office—205 Front Street, San Francisco, California.

TWO LIVES.

Bill Nye Shows How Two Paths May Run Wide Apart.

I once knew a boy quite well who went to school with me, and in other ways had every opportunity for refinement. He was a boy with good intentions, and wore in summer a chip hat faced with blue gingham. Each of us had a stone bruise on the same foot, and our feet cracked open on the back in the same manner, so that at night, when we went out to the well, and reluctantly bathed them in rain water, with soft soap, and wiped them tenderly on the grass before we went to bed, we could be heard wailing at the same moment by the practiced ear.

But he did not aspire as I did. While I was grinding scissors during the summer months, in order to go to college in winter, he loitered about the depot watching the incoming and outgoing trains, and carefully observing the brakemen as they coupled the freight cars together, hoping, too, that some day he might see an accident of some kind. In this way he obtained a great deal of crude information about the movement of trains, and how to unscrew the hose of an air brake so as to make it pop.

He did not care very much for literature, science or the arts. He preferred exercise in the open air and fruit. While I was struggling with Xenophon and Sallust, he was standing in with Shorty Hughitt on second seven, and trading maverick watermelons with him for a ride up to McCordsville and back.

When I was sent abroad to complete my studies at a large and popular female seminary in Munich, Jasper L. Paintbottom was running extra over the hill on second six, under old Flatwheel George. Every one felt sorry for Jasper, but each and all pointed to me with pride, and the general joy when I went away to complete my education under a maestro, and it was admitted by one and all that I might not come back, was great and gratifying.

I was absent for many years, traveling through the Orient and doing the continent on foot wherever the fare was too high, until at last, sunburned and bilious, but haughty and refined, I came back and sought to astonish my old neighbors. I reached the adjoining state, and there my money gave out. This did not surprise me, because it had happened before. I grieved over it for a little time, and then, instead of taking to drink, as so many others would have done, I went to the president of the road, who lived there.

I found the building first. You always have to first find the building in which a railroad president has his office. Do not attempt to look up a railroad president without having first learned what building his office is in.

I then went up the stairs. It was a half holiday, and so I could not ride in the elevator because the elevator man was away acquiring much needed rest. But I heard that the president was at work.

First I went to a large office and waited a few weeks, thinking that was the ante-room to the president's office, but it turned out to be the room where old claims against the company were stored away, awaiting the day when the heavens will roll together as a scroll and each be required to give an account of himself, from the agent at Hanging Rock up to the receiver of the road, for the deeds done in the body.

Then I was shown to a small waiting room, or ante-room, with a hard, hot chair in it, and a small fence around it. It was quiet, painfully quiet, save the short, crisp notes of a caligraph in the next room, and a few stenographic notes lying on a roll top desk.

They told me that the president was busy, also that he was away. I said I trusted them most implicitly, and hoped they would not mislead me. Once a big, red faced man, with side whiskers, brushed by me and went into the president's room, where he remained till I was sure he must be the president himself, but afterward I learned that he was just down there to loan some money to the road, and which was to be used for paying dividends.

Finally the president's hour for going home arrived, and so he went home by another door. When the janitor swept out the building and locked up I decided to go away and call again on the following day. I was shown to the same room; I often wonder what a room thinks when a man is shown to it. For a few hours I sat and listened to the guinea hen song of the caligraph, and then I was told that the president would see me.

I came in with that sinuous movement peculiar to a man who desires a pass, and leaned my wet umbrella up against the hot radiator. Behind the desk sat a man with red hair. It was Jasper L. Paintbottom, as the keen far sighted reader has already guessed. I was poor and passless. He rich, pampered, feted, sued, replevined, toasted, enjoined and courted all the way from the justice of the peace office to the court of last resort. He sat in an easy attitude, with his feet in the upper drawer of his escritoire. His head was thrown back in a half defiant manner, and near him was a blank book of trip passes, void if detached. I knew that they had dark red conditions on the back, holding the company perfectly blameless and pure in case it should by an oversight lose my baggage or lubricate its roadbed with my digestive economy. But I did not care for that. I knew that the road would not take advantage of me if I signed the conditions.

Mr. Paintbottom recognized me as soon as I told him who I was, and told me to draw my chair up closer, where I could see out of the window and so down the fire escape. He was real cordial. He wished his wife was at home so that I could come up to the house and dine with them.

But she was away. She had gone to Tuxedo Park to stay a few weeks with the Lorillards. He was sorry—I could see that—but how long was I going to be in town?

I said I had nothing special to keep me there more than a day or two. I had intended to go right on that day, but had been detained by some delay in my transportation.

Oh, that was it. What seems to be the matter?

Well, I said, my passport had not arrived, and I had called to see him about giving the conductor something in the way of a note of introduction, so that I would be perfectly safe. Then he took a blank pass and filled it out, made it good for thirty days, marked it "issued on account of charity," signed it with a manner that made his old signature, whittled on the back of our school house, look positively beautiful, told me to receipt for it and sign the conditions, rang the bell and told his office boy to show in Mr. Plunkhead, who was waiting, wrung my hand, as he would have toyed with a felon on his own hand, and I passed gradually out.

I did not blame him at all. I blamed myself. But as I looked at his signature on the pass, I could not help contrasting it with his old one, and fancying that it had changed just as his manner had changed, and so I give them here to show how naturally we drift into these things, and do what other people do unconsciously.

Jasper L. Paintbottom

Signature of Jasper L. Paintbottom while braking extra on second six, under Flatwheel George (taken from a time check).

Signature of Jasper L. Paintbottom after becoming president of the road (taken from bottom of pass).—Bill Nye in Once a Week.

A London Hotel.

They have American pensions (pronounced pon-say-ongs) in Paris, Berlin and Vienna, which lure many of my fellow countrymen and women to destruction, and of which I hope to be able to tell you something later; but, with all their faults, I think they have some claim upon the consideration of tourists which lay over the English hotel conducted on the American plan.

You are driven up to the hotel in a carriage, and you expect to alight at the ladies' entrance, as you would, under similar circumstances, at the Palmer or Grand Pacific. But you don't do anything of the kind.

The driver descends, and, approaching a large iron gate, pulls a bell knob, which pull is responded to by the hammer of a gong such as pilots signal to the engineers with on American steamboats. The driver then resumes his seat.

In the course of the morning, or afternoon, or night, as the case may be, the gate is opened and a warty faced man with a snub nose and a white apron approaches the carriage. He is in no hurry whatever.

"Do you wish to hingage apartments?"

"We do."

"'Ave you brought your luggage?"

"We 'ave not."

"Ware is it?"

"At the Euston Station."

"'As it been hexamined?"

"We presume so."

"'Ave ye the checks?"

"We 'ave."

The warty faced man grunts, passes through the gateway, locks the gate after him, and returns in the course of an hour. This time he swings the gate wide open and invites the driver to come in. We are now in an open court yard. We alight. We enter an office that looks like a railroad baggage room. The "lift" isn't running, but it will be in a few minutes. We wait half an hour. We climb the stairs. We are taken to a handsome suite of rooms. We are tired and cross.

Enter another white aproned man. Would like your names. Gets them. Bows and retires. Enter another white aproned man, with nose like a lobster claw. Hands us bill of fare. We order breakfast.

"When can we have it?"

"Himmejiately."

"All right."

"What, sir?"

"I say, all right."

"Yes, sir; 'twill be all right, sir."

It comes in the course of the day. We hint to the waiter that we understood that this hotel was conducted on the American plan.

"So it is," he replies, and he says it so firmly and conclusively that it would be useless to contradict him.

We rest, take a nap, read the papers, kill time as best we can until the afternoon is well advanced. We ring for waiter. Waiter comes. This time his nose has the color of a blue bottle fly.

"How about dinner?"

"Tabledote or sarved?"

"Tabledote, of course."

"Tabledote over, sir."

"Why were we not called?"

"Got no orders, sir."

"Well, then, let us have it sarved."

We learn later that guests are not invited to table d'hote unless they leave orders to this effect, and that it is served only for one hour. Our dinner must be cooked completely, and the day is almost spent before it arrives.

"Papa," suggests Ned, "let us go out and find an American hotel that is conducted on the English plan."—Chicago News.

Ed.

Ed was a man that played for keeps, 'nd when he tuk the notion
You cudn't stop him any more'n a dam 'ud stop the ocean;
For when he tackled to a thing 'nd set his mind plum to it,
You bet yer boots he done that thing, though it broke the bank to do it!
So all us boys, uz knowed him best, allowed he wusn't jokin'
When on a Sunday he remarked uz how he'd gin up smokin'.

Now this remark that Ed let fall, fell, ez I say, on Sunday—
Which is the reason we wus shocked to see him sail in Monday
A-puffin' at a pipe that sizzled like a Chinese cracker,
An' smelt fur all the world like rags instead uv like terbacker.
Recoverin' from our first surprise, us fellows fell to pokin'
A heap uv fun at "folks uz said how they had gin up smokin'."

But Ed—sez he: "I found my work cud not be done without it—
Jes' try the scheme yourselves, my friends, ef any uv you doubt it—
It's hard, I know, upon one's health, but there's a certain beauty
In making sackerfices to the stern demands uv duty!
So, wholly in a sperrit uv denial 'nd concession,
I mortify the flesh 'nd smoke fur the sake uv my profession."

—Chicago News.

An Intelligent Mule.

"Say, Uncle Rastus," remarked a citizen, "isn't that a very light load for so big a mule?"

"Yes, sah, but he kicked ha'f the load off hisself jest below the hill. It's s'prisin', sah, the 'mount of intelligence dat animile has got. He knows when he's got a load mighty sight better'n I do."—New York Sun.

The Force of Example.

Young Mamma—Children, why are you nodding and smiling at all the policemen we pass?

Children (who are in the habit of taking their morning walks with the nursemaid)—Oh, because Mary always does, mamma.—Cartoon.

Suggestions About Lamps.

All who have experience in mineral oil lamps must, sooner or later, learn that the condition demanded for their burning without smell is that the wick shall be turned up so as to obtain a full-sized flame without actual smoking. It is commonly supposed at first that by keeping the flame low all objectionable odor is prevented, but the contrary is the case. Something more may be learned by first charging a lamp with a measured quantity of oil, burning it with the flame at full size for a given time and ascertaining the loss of oil, then making a second experiment with the same lamp, same quantity of oil, burning the same length of time, but with the wick turned down so as to have but a fraction of the amount of light supplied during the first experiment. On measuring the loss of oil this time it will be found but little less than in the first case. Therefore, in turning down such lamp flames we obtain no saving of material as in turning down a gas flame. The reason is that with a low flame a considerable quantity of the products of incomplete combustion are making their escape into the air, and these are not only offensive to the sense of smell, but are also injurious to the health.—*Brooklyn Standard Union.*

FASHIONS FOR WOMEN.

Some of the Latest Popular Fancies in Dress and Garnitures.

Pale almond-colored or apricot brocade, laces, bonnets, stockings, dinner-gowns, and other entire costumes, made up in conjunction with golden brown or mahogany velvet, is a late French fancy in dress and garniture.

White toilets are likely to be more than ever the rage in the fashionable world this winter. Of white dress fabrics there is an elegant and almost endless variety—brocade, velvet both plain and striped, watered silk, bengaline, Ottoman silk, faille, Irish poplin, velvet, embossed satin, India cashmere, Henrietta cloth, tailor cloths of various grades, French and English vailings, China crepe-lisse, tulle and gold-embroidered white India silk muslins being equally in vogue.

A bewitching Spanish opera-cloak, made by Worth, is of white and gold brocade lined with pink plush and adorned with pink marabout bands. Another wrap included in a trousseau is of blue and gold brocatelle on a pale-gray satin ground. This is lined with pale-blue plush, and has gray feather-bands powdered with gold. A Bulgarian hood is added to this cloak, which is in Irish peasant style, the hoodband of gold-beaded velvet with drapery of gold and blue crepe de Chine. The ends of this drapery are in fichu points, and are long enough to be wound around the throat, falling from under the chin over the chest to the waist. Among other expensive wraps are those of cream-white soldier's cloth, in palisse and redingote shapes, trimmed with fine gold galloons and bordered with white Persian lambskin. The wraps are fastened with large gold buttons and gold cord brandebourgs.

Following the very popular method of applying black to colors, we see all sorts of black fur used on cloaks, jackets, redingotes, tea-gowns, and bonnets of Roman red, moss green, reseda, terracotta, dark blue, and mahogany cloth. Astrakhan, black fox, black bear, monkey, black martin, and the darkest wolverine furs are each and all used for this purpose.

The new bordered fabrics permit some novel features in simple gowns.

Worth once said that a blonde can wear yellow just as well as she can sit in the sunlight.

A pretty way to make an afternoon dress is to form the overskirt of three widths of cashmere, this as long as the under skirt. Shirr or plait this to a belt, but open it the entire length of the front, and wear a petticoat beneath, of watered silk. Let most of the fullness of the overdress be massed at the back. Make a Russian jacket of the cashmere, or for more dressy use, velvet, this open over a vest or blouse of the moire.—*N. Y. Post.*

Origin of Visiting Cards.

As is the case in many other instances we owe the invention of cards to the Chinese. So long ago as the period of the Tong dynasty (618-907), visiting cards were known to be in common use in China, and that is also the date of the introduction of the "red silken cords" which figure so conspicuously on the engagement cards of the country. From very ancient times to the present day the Chinese have observed the strictest ceremony with regard to the paying of visits. The cards which they use for this purpose are very large, and usually of a bright red color. When a Chinaman desires to marry, his parents intimate that fact to the professional "matchmaker" who thereupon runs through the list of her visiting acqnaintances, and selects one whom she considers a fitting bride for the young man; and then she calls upon the young woman's parents, armed with the bridegroom's card, on which are inscribed his ancestral name and the eight symbols which denote the date of his birth. If the answer is an acceptance of his suit, the bride's card is sent in return; and should the oracles prophesy good concerning the union, the particulars of the engagements are written on two large cards, and these are tied together with the red cords.—*Toronto Times.*

War Without Bloodshed.

It is well-known that the nitrite of amyl possesses the power of causing insensibility very quickly in a human being breathing its fumes. The effect is equivalent, temporarily, to a paralytic stroke. It is very cheap and plentiful, and Mr. Edward Weston, the electrician, proposes to use shells filled with this chemical instead of gunpowder. He argues that a few gallons of this nitrite dashed on the deck of a warship would soon render the crew helpless. The most powerful ironclads would be even more vulnerable than the light cruisers, for they would be sucking down great draughts of air through their artificial ventilators, and the odor would thus rapidly permeate the whole ship. The whole crew being rendered helpless for an hour or two the ship could, of course, be towed into a safe port, while the captors ventilated her and removed the insensible men.—*N. Y. Mercury.*

—Prof. Starr (of the planet Mars, looking through his new Flick telescope)—"There's one thing on that ten-thousandth rate planet that's always troubled me. I see now that Boston is in the United States and not the United States in Boston."—*Judge.*

The sooner the corn-fodder is put under shelter the brighter it will remain during the winter. To leave it in the fields only induces loss of quality as well as waste of material.

—The Bismarck of to-day is thin and bony, and the doctor has it is well known, disincumbered him of the unhealthy fat merely by preventing him drinking at his meals. He is looking remarkably well; his gait is swift and denotes real vigor, his complexion is clear and almost pink. The features are softened down; you scan them in vain to discover that harshness, not to say ferocity, which is so apparent in his photographs.

—Jeff (a railroad passenger)—"I say, Clem, wha—what am de ax an' saw hangin' up dar fo'?" Clem—"When yo' arsk foolish questions, Jeff, don't shout so's you kin be heered all de way from de cowketcher to de larst station. Dey's fo' cuttin' railroad san'wiches. I'se 'sprised at yo' ignorance.—*N. Y. Sun.*

—Judge Stacy, who died recently at Tecumseh, was one of the best known lawyers in Southern Michigan. It is a peculiarity of the Stacy family that many of its male members are born with only three fingers on each hand, and the dead jurist was so marked.

—A singular coincidence occurred in Bangor the other Sunday. Rev. G. W. Field and Rev. C. H. Cutler exchanged pulpits. Neither knew what was to be the subject of the other's sermon, yet singular enough, both took the same text.

—Litetop (who had a reputation for loquacity)—"Gus, I'm going to learn to play upon some sort of a musical instrument. What kind do you suggest?" Gus—"A mouth instrument of some sort."—*Yankee Blade.*

THREE BIG LOTTERY PRIZES.

New Yorkers Who Were Lucky at the Last Drawing in the Crescent City.

When a man strikes a winner in a 40 to 1 shot at a horse race all his friends think he has had phenomenal luck. If these very same people were asked what they thought of a 15,000 to 1 shot they would laugh at the idea of such a thing. Yet two people at least in this city have received convincing proof of it during the past week, when their investments of $1 each in the last drawing of the Louisiana State Lottery Company brought each in $15,000 in cold cash.

The lucky people are respectively Mrs. M. Ansel, who keeps a French restaurant at 76 West Houston street, and a poor woman who also lives on the west side, and who received her money through Agent Blake of the Canal street office of the Adams Express Company. The holder of the latter ticket has any number of poor relations and for that reason does not care to have her name made public lest they should swarm around her and devour it all.

One of the strangest features of this piece of good luck is that neither woman never before invested in lottery tickets and at their first venture struck it rich enough to make even a millionaire's mouth water.

Mrs. Ansel, who is a stout, jolly-looking French woman, was busily engaged looking after the wants of her guests when the reporter called to ask her about the matter. "Oh, yes," she said "it is all true, but I can scarcely believe it sometimes when I think of it. It all came about in such a funny way, too."

"You see I have a brother in New Orleans, and he sent me a present of the ticket, which was one-twentieth part of No. 56,621, that drew the capital prize of $300,000. I had never seen one of the tickets before and did not think much about it. When I heard it had won $15,000, however, you may be sure I took good care of it until I expressed it to New Orleans for collection. No, I won't retire from business. I'm making a good living at it and will invest the money I won."

Agent Blake said that the woman who held the other twentieth of ticket No. 56,621 was a poor working-woman, who had never dreamed of owning so much money. She told him that she had never bought a ticket before, and would not have done it but for the fact that several friends of hers in Philadelphia, who had also won large sums at different times, fairly talked her into doing so. The one-twentieth of ticket No. 99,391, which drew the $100,000 prize was also held in this city, and the money was paid to Benjamin Kahn of 113 Bleecker st., who said he was merely acting in the matter as the agent for a friend.—*New York Daily News*, Dec. 4.

"THE LOUVRE," SAN FRANCISCO.

The best imported beers, yet! Only five cents a glass. A restaurant with all the delicacies of the season at popular prices—these are among the "Louvre" attractions. No wonder all of our people should spend an hour of their "Frisco" time there.

ORPHEUM OPERA HOUSE, SAN FRANCISCO.

The managers of this popular pleasure resort have, with their accustomed enterprise, secured a most meritorious series of attractions for the present year. Visitors to San Francisco should not fail to visit the Orpheum, the largest theater in the city, giving an entertainment which is usually better than those given by other houses charging two or three times the admission price.

The cure of the opium habit may be found in Dujardin's Life Essence. Without any opiate, the iron and protagon will furnish the nervous system all that it needs. It has never failed when faithfully used. Price, $1.50 a bottle. All druggists.

How to Cure Skin & Scalp Diseases with the Cuticura Remedies.

THE MOST DISTRESSING FORMS OF SKIN and scalp diseases, with loss of hair, from infancy to old age, are speedily, economically and permanently cured by the CUTICURA REMEDIES, when all other remedies and methods failed.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by the POTTER DRUG AND CHEMICAL CO., Boston, Mass.

Send for "How to Cure Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Relief in one minute, for all pains and weakness, in CUTICURA ANTI-PAIN PLASTER, the only pain-killing Plaster. 25c.

S. F. N. U. No. 343. New Series No. 2.

—It was nearly midnight, and she was gazing dreamily into the fire. "A penny for your thoughts, Miss Clara," he said, airily. "I was thinking, Mr. Sampson," she replied, "how very much annoyed papa was to-day over the amount of last month's gas-bill." And then presently he left without giving her the penny.

—Jink's little olive branch made a great outcry when his mother attempted to give him a sea bath. Jinks became provoked at the youngster, and at last exclaimed: "I don't see why the obstinate little fool is frightened at water!" Whereupon Mrs. Jinks cast a withering glance at her liege lord's ruddy nose, and retorted: "Inherited, I suppose. His father objected to water before him." Jinks failed to pursue the colloquy further, and turned slowly and reflectively from the scene.

—Stewed Oysters in White Sauce.—Put three dozen in their shells in a large iron pot. Pour over them from the teapot about a pint of boiling water. Cover them tightly for a few minutes. At the end of this time the shells will have begun to open and the process may be easily finished with a knife, the oyster and the juice being slipped out of the shell into a bowl. Make a rich cream sauce, using abundance of butter. Season it thoroughly, slip the steamed oysters in, let them boil up once and serve. This is not the regular steamed oyster, but it is a good way to serve this most delicious of shell-fish.—*N. Y. Tribune.*

ARE WE TO HAVE ANOTHER WAR?

Some political prophets aver that we shall. Be that as it may, the battle waged by medical science against disease will never cease until we arrive at that utopian epoch when the human family shall cease to be afflicted with bodily ailments. One of the most potent weapons which the armory of medicine furnishes, is Hostetter's Stomach Bitters, which is a special utility as a family remedy, as it is adapted to the immediate relief and ultimate cure of those disorders of the stomach, liver and bowels which are of the commonest occurrence. Indigestion, biliousness and constipation are inseparable companions, and these ailments are completely eradicated by the Bitters. But the remedial scope of this superlatively wholesome and genial medicine takes in also nervous ailments, rheumatism and kidney troubles; its action in these, as in the other complaints, being characterized by unequaled thoroughness.

I have now abundant material for another book. I think I will find myself.—*Stanley.*

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

The weeds of wo may be said to be the cigars you get in a country grocery.

"GIVE HIM $2, AND LET HIM GUESS."

We once heard a man complain of feeling badly, and wondered what ailed him. A humorous friend said, "Give a doctor $2, and let him guess." It was a cutting satire on some doctors, who don't always guess right. You need not guess what ails you when your food don't digest, when your bowels and stomach are inactive, and when your head aches every day, and you are languid and easily fatigued. You are bilious, and Dr. Pierce's Pleasant Purgative Pellets will bring you out all right. Small, sugar-coated, easy to take. Of druggists.

Frenchman—Yes, Miss Bostonia, in the Mediterranean I sailed through schools of sardines. Miss Bostonia—Nonsense! How could they swim in those heavy tin boxes?

CONSUMPTION CURED.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 *Power's Block, Rochester, N. Y.*

The latest thing in church entertainments is a butter tea. A sort of oleo performance, as it were.

A TREMENDOUS SENSATION

Would have been created one hundred years ago by the sight of one of our modern express trains whizzing along at the rate of sixty miles an hour. Just think how our grandfathers would have stared at such a spectacle! It takes a good deal to astonish people now-a-days, but some of the marvelous cures of consumption, wrought by Dr. Pierce's Golden Medical Discovery, have created wide-spread amazement. Consumption is at last acknowledged curable. The "Golden Medical Discovery" is the only known remedy for it. If taken at the right time—which, bear in mind, is not when the lungs are nearly gone—it will go right to the seat of the disease and accomplish its work as nothing else in the world can.

"Have a smoke, Simson?" said his friend, as he passed out a fragrant Havana. "No, thank you; I've sworn off." "Well, put one in your pocket to smoke to-morrow."

DELICATE CHILDREN, NURSING

Mothers, Overworked Men, and for all diseases where the tissues are wasting away from the inability to digest ordinary food, or from overwork of the brain or body, all such should take SCOTT'S EMULSION of Pure Cod Liver Oil with Hypophosphites. "I used the Emulsion on a lady who was delicate, and threatened with Bronchitis. It put her in such good health and flesh, that I must say it is the best Emulsion I ever used."—L. P. WADDELL, M. D., Hugh's Mills, S. C.

Out of Little Mouths—Belle was asked where her little brothers, aged four and two were. She replied: "They are sitting on the doorstep talking about old times."

"HAD BEEN WORRIED EIGHTEEN YEARS."

It should have read "married," but the proof-reader observed that it amounted to about the same thing, and so did not draw his blue pencil through the error. Unfortunately there was considerable truth in his observation. Thousands of husbands are constantly worried almost to despair by the ill health that afflicts their wives, and often robs life of comfort and happiness. There is but one safe and sure way to change all this for the better. The ladies should use Dr. Pierce's Favorite Prescription.

Costly Consideration—Cole—Hello; I'm in a hurry! I was just going to dinner. Cole—I won't detain you, then; I will go with you.

HAWKEYE GRUB & STUMP MACHINE.

Works on either STANDING TIMBER or STUMPS. Will pull an ordinary Grub in 15 minutes.

Makes a clean sweep of two acres at a sitting. A man, a boy and a horse can operate it. No heavy chains or rods to handle. The crop on a few acres the first year will pay for the Machine. It will only cost you a postal card to send for an Illustrated Catalogue, giving price, terms and testimonials. Address the Manufacturers,

JAMES MILNE & SON, Scotch Grove, Iowa.

Cures in 1 TO 5 DAYS. Guaranteed not to cause Stricture. Made only by the Evans Chem. Co. Cincinnati, Ohio. Trade Mark

I prescribe and fully endorse Big G as the only specific for the certain cure of this disease. G. H. INGRAHAM, M. D., Amsterdam, N. Y.

We have sold Big G for many years, and it has given the best of satisfaction. D. R. DYCHE & CO., Chicago, Ill.

$1.00. Sold by Druggists.

ASTHMA CURED

German Asthma Cure never fails to give immediate relief in the worst cases, insures comfortable sleep, effects cures where all others fail. A trial convinces the most skeptical. Price 50c. and $1.00. Druggists or by mail. Sample FREE for stamp. Dr. R. SCHIFFMANN, St. Paul, Minn.

CALIFORNIA ROSES!

STRONG, WELL-ROOTED PLANTS, ALL Labeled, Assorted, 10 for $1.00. Geraniums, Fuchsias, Heliotrope, Begonias, Verbenas and Chrysanthemums in large variety. Good Healthy Plants, all Labeled, 12 for $1.00. All plants sent free by mail, and safe arrival guaranteed for Cash with order. Address, W. A. T. STRATTON, Florist, Petaluma, Cala.

PIANOS. 1st Premiums. 25,000 in use 20 years Established. New patented Steel Tuning Device, in use in no other Pianos, by which our Pianos stand in tune 20 years, good for 100; not affected by climate. No wood to split, break, swell, shrink, crack, decay, or wear out; we guarantee it. Elegant Rosewood Cases, 3 strings, double repeating action; finest ivory keys; the Famous ANTISELL Call or write for Catalogue, free. T. M. ANTISELL PIANO CO., Manufacturers, Odd Fellows' Hall, Market and Seventh Streets, San Francisco.

BY MAIL

Shopping by mail is quite a practice, and our experience has proven it satisfactory to buyer and seller. We offer to send postpaid—School Handkerchiefs, border, each, 3c, 4c, 5c; Ladies' Handkerchiefs, border, each, 4c, 5c, 6c, 10c; Ladies' Hdks., border, each, 15c, 20c, 25c; Ladies' Hdkfs., scalloped, each, 10c, 15c, 25c; Ladies' Hdkfs, embroidered, each, 12c, 15c, 25c, 50c; Ladies' Hdkfs, fine linen, 15c, 20c, 25c; Ladies' Hdkfs, hemstitched, 25c, 50c; Silk Hdkfs, figured, 25c, 50c, 75c, $1, 1.25; Silk Hdkfs, plain, white or red, 45c, 75c, $1; Bandanas, two sizes, 7c, 10c; Men's White Hdkfs, 5c, 15c, 25c, 50c; small reduction in ½ doz. and doz. lots. Men's Neckties, light, 12c, 15c, 25c; Men's Neckties, dark, 15c, 25c, 50c; Men's Kid Gloves, $1, $1.25, $1.50, $2; Men's Kid Gloves, fur top, $1, $1.25, $1.50; Men's Buck Gloves, $1, $1.25, $1.40; Men's Buck Gauntlets, $1.25, $1.50; Men's Working Gloves, 50c, 75c, $1; Men's Woolen Gloves, 50c; Ladies' Warm Mittens, 25c; Ladies' Wool Hose, extra, 45c, 50c; Infants' Wool Hose, extra, 20c, 25c; Misses' Wool Hose, 5 to 8½, 30c to 45c; Men's Cotton Half Hose, 8c, 10c, 15c, 20c; Men's Fancy Cotton Hose, 25c, 35c, 50c; Men's Wool Half Hose, 25c, 35c, 40c; Garden Seeds, 25 papers assorted for $1; Rogers' Plated Teaspoons, 6 doz., $1.15; Rogers' Plated Butter Knives, each, 50c, 65; White, Undervests, ladies', 48c, 68c, $1, $1.30; Red Undervests, ladies', 75c, $1, $1.30, $1.50; Combination Suits, wool, red or white, each, $2.25; Corsets, 50c, 60c, $1, $1.25, $1.50, $1.75, $2. If to be registered, add 10c to above prices. Send stamps, P. O. or express order. Underwear of all kinds, Shoes, Rubber Goods, Notions and many other goods by mail at a trifle above list prices. Write for complete list of 300 articles at Wholesale prices, in any quantity, to Smith's Cash Store, No. 418 Front St., San Francisco, Cal.

DR. PIERCE'S NEW BELT AND SUSPENSORY.

(Pat. Oct. 11, '87) cures all Nervous and Chronic Diseases of both sexes. Price $6 and upward. Send 2c. for sealed pamphlet No. 2. RUPTURE. Ruptured cured. Stamp for Pamphlet No. 1. PILES. New Invention. Send 2c. stamp for Pamphlet No. 3. Address, M. E. T. Co., 704 Sacramento St., San Francisco, Cal.

OVER 5,000,000 people believe that we pays best to buy Seeds of the largest and most reliable house, and they use

Ferry's Seeds

D. M. FERRY & CO. are acknowledged to be the Largest Seedsmen in the world. D. M. FERRY & Co's Illustrated, Descriptive and Priced SEED ANNUAL For 1889 Will be mailed FREE to all applicants, and to last year's customers without ordering it, if sufficiently valuable to all. Every person using Garden, Field or Flower Seeds should send for it. Address

D. M. FERRY & CO., Detroit, Mich.

Earliest Cauliflower in existence.

The BUYERS' GUIDE is issued March and Sept., each year. It is an encyclopedia of useful information for all who purchase the luxuries or the necessities of life. We can clothe you and furnish you with all the necessary and unnecessary appliances to ride, walk, dance, sleep, eat, fish, hunt, work, go to church, or stay at home, and in various sizes, styles and quantities. Just figure out what is required to do all these things COMFORTABLY, and you can make a fair estimate of the value of the BUYERS' GUIDE, which will be sent upon receipt of 10 cents to pay postage. MONTGOMERY WARD & CO. 111-114 Michigan Avenue, Chicago, Ill.

CARVING AND TURNING.

An Interesting Description of a Pleasant and Well-Paid Occupation.

There are few trades requiring more skill than those of carving and turning in wood and ivory. The "kit" of these mechanics comprises chisels and gouges of various sizes, and what is called a "V" tool. In carving heads, images or designs of different kinds of wood the block is first brought into rough shape with the gouges, and, when this is done, the other tools are used alternately down to the finishing, which is done with the finer chisels. The carving of woodwork of this description, which does not apply to furniture, is done out and out by the workmen, and for a day of ten hours they receive $2.50 to $3. The work is fairly steady the year round, and child labor or convict labor have no terrors for wood carvers.

As a rule the business of ivory-carving is combined with that of wood carving, the same work being done in most of the places, and at the same time a few of them do what they call tortoise-shell work. There are three kinds of ivory used in the manufacture of various articles made from this material. The best is imported from Africa, and at times tusks are had as much as six feet in length and weighing nearly one hundred pounds.

The price of these tusks ranges from $2.50 to $3 a pound, according to quality. There is a smaller tusk from the same place, which in most cases will measure from eighteen inches to three feet in length, and the price of these ranges from $1 to $2 a pound. These tusks are known by the name of "Scrivelloes." This trade is controlled entirely by an importing firm whose headquarters are in Hamburg. Another species of ivory used in the trade is "Walrus." It is much cheaper than the above, but the one vital objection to it is because of the "pitti" running through the center of it, which materially interferes with its usefulness. The remaining species, but one that is little used, is that of the hippopotamus. Although occasionally utilized, it is of little value, the objection to it being because of its crookedness, which prevents its use for any but small articles. The articles made from these materials consist principally of keys for musical instruments, handles for parasols and breastpins.

The tortoise-shell business comprises the carving and ornamentation of ladies combs. In doing this work the teeth are first made, and then four or five of the shells are riveted together, the desired pattern is pasted on the top shell, and with a highly-tempered and fine jig-saw the design is cut out. The combs are then given to the carvers, who finish the work.

In the ivory branch the work is divided into two branches, turners and carvers. The wages of the former range from $10 to $14 a week, and of the latter from $12 to $18 for the same period. Like the wood-carvers, their hours are ten a day. For some years there has been no material change in the wages of either branch, each man being paid in accordance with the ability he possesses. The wages paid in this city compare favorably with those paid in other places. The busy seasons in the trade are in the spring and fall of each year, but it may be said of the business that it is fairly steady. The machinery used in the places where this work is done are circular and jig saws of the finest texture, lathes for turning and presses for drilling holes. —*N. Y. Mail and Express.*

PULMONARY DISEASES.

How Climate is Made the Scapegoat of Personal Imprudence.

"Pulmonary disease is the scourge of our climate," says the medical faculty, in its sententious way. This has long been said, and the phrase will probably continue to be repeated while grass grows and water runs. Yet it is little better than a libel on the elements, for all that.

Climate is made the scapegoat of personal imprudence. If people *will* overheat their houses and places of business in winter, if they choose to sit, for an hour at a time, overcoated, shawled, hatted and India-rubbered, in one another's oven-like offices, and to plunge thence, bathed in perspiration, into an open-air temperature below the freezing point, what right have they to charge the climate with their coughs, influenzas, sore throats and consumptions? Nobody could be pitched out of the tropic of Capricorn into the frigid zone two or three times a day without damage to his breathing apparatus, we take it.

Practically, so far as difference of temperature is concerned, thousands of us pass through this sort of ordeal almost every winter's day. And yet sufferers from diphtheria, pneumonia, bronchitis, asthma, etc., generated by their own insane neglect of the most obvious sanitary rules, are taught to believe that they are the victims of climatic influences.

Keep the thermometer down to sixty-five degrees in your stores, counting-houses and domicils from November till April; never sit in rooms heated even to that moderate degree in your beaver cloths, furs and promenade headgear; warm yourselves with exercise instead of immoderate artificial heat; and don't be afraid to let the outside air brush the inside of your dwellings, etc., with its healthful wings, at least twice every twenty-four hours. Do this, all ye who are "subject" to coughs and colds that keep you barking and snuffling the winter through, with a deadly-like glimpse of consumption in prospective, and we venture to say you will think better of this "terrible climate" next spring than you do at present.—*N. Y. Ledger.*

OF GENERAL INTEREST.

—Down in Brazil the emancipation of slaves was mainly due to an editor who kept his paper red-hot with abolition arguments. He did not have much success until he printed a translation of "Uncle Tom's Cabin." Then the people waked up. They cried over the story, and raised such a protest against slavery that the Government was forced to abolish it.

—A Greenville (Mich.) woman who asked for a divorce the other day told the court that a little, measly, one-armed cuss had licked her husband. "My marriage contract calls for a lord and protector," she said, "but when a man is so easy to get away with he can't be much of a lord to a woman and protect her." The court allowed that she had all the logic on her side.

—King Mwanga, who rules over the black Province of Uganda, is not a pleasant man for a next-door neighbor. He rules over 10,000,000 subjects, and is as ferocious as he is powerful. He has 1,500 wives, and kills five of them every day for his amusement. He is the largest slave-trader in Central Africa, supplying the Mohammedan dealers annually with about 150,000 slaves.

—A passenger on a west-bound train from Chicago hid his money in one of his shoes, on retiring for the night, and then placed the shoe and its mate in the aisle, near his berth. A porter, having subsequently blackened the shoes and found the "hidden treasure," returned it to the owner, who is said to have demanded a light, so that he could count the money and see if the finder had taken any.

—A writer in a recent book about traveling in the East, telling of the slow pace and multitude of animals required in caravan traveling, makes the calculation that the Israelites, when they went from Egypt under Moses, must have had a caravan at least two hundred leagues long and must have employed six million camels. What a parade for the youthful Egyptian as he saw it pass.

—Jefferson's Island, in Louisiana, the sometime winter home of the genial actor of Rip Van Winkle, is a superb hill crowned with great forest trees, lying on a trembling prairie or semi-marsh, and with a fine lake, called Lake Peynier, for its outer margin. On this island, which contains 2,000 acres of land, was formerly an orchard of fine oranges. Here Mr. Jefferson plays at raising fine cattle. He has something over two thousand head and a few blooded horses.

—Extraordinary stories are told of the healing properties of a new oil, which is easily made from the yelks of hen's eggs. The eggs are first boiled hard, and the yelks are then removed, crushed and placed over a fire, where they are stirred until the whole substance is just on the point of catching fire, when the oil separates and may be poured off. One yelk will yield nearly two teaspoonfuls of oil. It is in general use in South Russia as a means of curing cuts, bruises and scratches.

—Julius Eichberg, the well-known Boston musician, tells this story of an early experience: One day a lady, somewhat advanced in years, came to make arrangements for taking private lessons in singing. At the end of the second lesson the teacher felt constrained to tell her that her ear was not true. She received the remark very coolly, and at the next lesson sang as badly as before. "I am afraid," said Mr. Eichberg, "that you can never learn to sing in tune." "Oh, it doesn't matter," was the surprising answer. "Doesn't matter!" said the astonished teacher "No," said the pupil, "I don't care any thing about music, but my doctor said that singing would be the best thing for my dyspepsia, and so I decided to take lessons."

Force of Sea Waves.

Some idea of the tremendous force possessed or exerted by sea waves may be formed by the fact that an iron column, twenty-three feet long and weighing some 6,000 pounds—part of a new lighthouse being built—was, in the course of operations, landed at Bishop Rock, England, and, a storm coming up, was left lashed by a half-inch chain at each end to strong eye-bolts. Three days afterward it was found, on examination, that the great column had been tossed up by the waves a distance of some twenty feet to the top of the rock, where it was swaying about like a piece of timber. Two days afterward, when the workmen were able to land, it was found that a blacksmith's anvil, weighing 150 pounds, which had been left in a hole three and one-half feet deep and two and one-half feet in diameter, had also been washed by the waves completely out.—*Science.*

An Intemperate Conclusion.

Two ladies met in a street car the other day, when one remarked to the other that she had a bad cold, and asked her if she was doing any thing for it.

"Oh, yes," she said, "I have been advised to take a good hot dose of gin—"

"Why, Mrs. ——," said her friend, "it can't be possible that you would set such an example as that in your responsible situation. It would be moral suicide."

"You interrupted me," said the other, coolly, "I was going to say a good hot dose of ginger tea taken every night was a sure cure for a cold."

"Oh!"—*Detroit Free Press.*

OF GENERAL INTEREST.

—A man at Tatnall, Ga., has twenty-seven brothers and sisters living.

—A gentleman in Portland, Ore., has succeeded in training a young elk to drive in harness.

—The annual value of the wool crop is from $75,000,000 to $90,000,000, varying with the market value.

—One of the most prosperous farmers of Cuthbert, Ga., is a Hebrew. He began business there as a baker, then became a merchant, and finally took to agriculture, which is very unusual for a Jew.

—Aunt Til Ruley, a colored woman who lives in Marion County, Ky., is said to be one hundred and twenty-one years old. She never nursed George Washington, but she recently walked from her home to Lebanon and back, twenty-eight miles, to attend a circus.

—In Cuba a woman never loses her maiden name. When married her husband's name is added to her own, but she is always called by her Christian and maiden names. Children take the name of both parents, but place the mother's name after the father's.

—The telephone was put to a novel use in Toronto. A citizen who had been summoned to appear at the police court for breach of a by-law, finding that he would be unable to appear in person, telephoned the facts to headquarters, admitting his guilt, and was fined one dollar and costs through the same medium.

—William Watson, an old settler living eight miles northwest of Windsor, Ill., died at his residence, at the age of seventy-six years, and was buried in a coffin that he made sixteen years ago for himself. It is of walnut wood and he has kept it in his house ever since, and two weeks before his death had it brought into his room and placed at the foot of his bed.

—A hen in Canada scratched up $400 in old coins a few days ago, and about the same time an Ohio hen was dissected and found to have dug up somewhere in her wanderings and swallowed a quantity of gold dust. These facts indicate that a new career of usefulness and honorable distinction is opening up before the humble barnyard fowl. Long may she scratch.

—The room where the Court of Appeals sits in the capitol at Albany is described as the most gorgeous in its appointments of all the court rooms in the country. The wood work is beautifully carved and panels are of mahogany and onyx. The carpet was woven to order across the water. Portraits of all the judges that have ever sat in the court are placed in panels about the room.

—According to the census of 1880-81, the last one taken, there were at that time 20,980,626 widows in India, of whom 669,000 were under nineteen years of age and 278,900 under fourteen years. According to the native custom, none of these widows are at liberty to marry again. The same census gave the total female population at 99,700,000, and of these only 200,000 were able to read.

—A physician giving a bit of his own personal experience, and having a constitutional tendency to sleeplessness, says that nothing has ever given such decided relief as eating heartily just before going to bed. He objects to the use of the customary night-cap as a remedy against sleeplessness, both because alcohol is injurious to an empty stomach, and because it does not induce a natural sleep. But he thinks that adults should be like babies, who sleep best with a full stomach, without night-mare, or other unpleasant results.

—A Turkish police court in Constantinople was investigating the cause of the death of a young and beautiful Circassian slave, found floating in the Bosphorus, with her hands and feet firmly bound with thongs. The court had the body identified as that of a girl who belonged to a wealthy Turk. Then it rendered the decision that the deceased came to her death by drowning, she having cast herself into the sea with the purpose of taking her own life. The firmness of this purpose was shown by the solidity with which she had bound her own hands and feet before throwing herself into the water.

An Anecdote of Greeley.

Horace Greeley was always sensitive to error in his proofs, and sometimes broke loose in his wrath. An inverted comma stung him like a mosquito. A mistake in a table of election returns set him into such fury as the red flag of the picador kindles in the Catalonian bull. "Henderson," he once said to the compiler of those sterile statistics, who had made an error of two votes in the returns from the Molly-muck-a-chuck district in the Mooseluemaguntic region of Northeastern Maine, "I discharge you; I don't want to see your face around here any more." But Henderson was at his post as usual the next morning. "How is this, Henderson?" said George Ripley, as he came into the office at his customary hour, "I thought Mr. Greeley discharged you yesterday." "Yes, he did," said Henderson, "but I didn't put any confidence in what he said." One day Mr. Greeley wrote that if a man were to shoot haphazard out of a window he would be morally responsible for any harm he might do. In print the "haphazard" became "half a yard," a rhetorical conversion that so depressed Mr. Greeley's spirits that he had no strength to discharge anybody, not even Henderson, which was his constant resource in great emotional crises.—*San Francisco Argonaut.*

A HUSBAND'S RIGHTS.

They Are Clearly Defined by a Progressive Legal Decision.

A peculiar, though perhaps just, decision has just been rendered by the Supreme Court of North Carolina. Last May, Horatio J. Mickle took up his residence near Guilford Courthouse, and, shortly afterward, became acquainted with Widow Sanders, who kept a boarding-house. This acquaintance soon ripened into love, as the novelists say, or at least it seemed so, for Mickle called upon the widow one evening and declared that if she did not promise to marry him, his body, sadly mutilated, should be soon laid away in the unsympathetic soil. The widow was tender-hearted and generous. She had never caused the death of any one, and, at her time of life, did not feel disposed to begin a course of such cruelty. She was married to Mr. Mickle. He brought his valise over to her boarding-horse, lighted a cob pipe which he found in a cigar-box on the mantlepiece, and at once began to make himself thoroughly comfortable. At dinner time he paid a high compliment to the widow's cooking by eating in an unrestrained manner. This pleased the widow, undoubtedly, for it was the highest praise which any one could bestow upon her art, but as the days passed—as the perfumed dew began to fall from the roses in the garden of the honeymoon—she became less joyous, for her bills had materially increased. One day she hinted to Mickle that it was time he were doing something. This deeply wounded his sensitive heart, and, turning to his wife, he said:

"Polly, must I conclude, with other thinkers, that marriage is a failure? Are you going to shut out the sunlight and let dark shadows convince me that the holy ordinance of matrimony has accomplished its mission and is therefore without that Divine force given to it by our ancestors?"

She was moved. "Forgive me, dear Horatio," she replied. "It was only a momentary fret. It shall not occur again."

"Polly, please see that it does not."

A few weeks passed. The dew was all gone from the roses. In truth, the roses were withering. Another largely-increased bill had been sent in. Polly spoke to Horatio. Tears shone in his eyes.

"Polly," said he, "am I to understand that the bright star of marriage has forever set?"

"Yours has unless you get something to do; I'll give you a pointer on that."

"What would you have me do, sweet creature?"

"Hustle; get out and hustle."

"Hustle!" he exclaimed. "Why, did I not drive up the cows yesterday evening? Mermaid of the ocean of my soul, how would you have me hustle?"

"I'd have you chop cord-wood—do something to lessen my bills."

"Why, do you not know that chopping cord-wood would greatly increase my appetite?"

"But it would bring in more money."

"Yes, but not enough to make up the difference. I know myself better than you do, Polly."

"Then you must be disgusted."

"Alas, you will drive me insane."

"No, but I am going to drive you away from here."

She did. He sued her, not for a divorce, but for board. The lower court decided against him. He took an appeal. The Supreme Court decided in his favor. The following is an extract from the decision rendered by the Chief Justice.

"The court holds that when a widow is fool enough to marry a loafer, that, in case she keeps a boarding-house, she must at least grant him table-board, and that when she finds herself unable to do this, he shall, if so inclined, be granted a divorce."—*Arkansaw Traveler.*

ORNAMENTS FROM FUNGI.

A Newspaper Man Explains How They May Be Made.

"What do you propose doing with that rubbish?" asked a lady of a friend who had just returned from the country.

The rubbish alluded to was a basketful of fungi, which are usually found on the trunks of old trees and stumps, and out of which many very pretty and curious ornaments are made. Occasionally the fungi grow to be sixteen inches in diameter, and, these large specimens made odd little shelves for bric-a-bac by straightening one side and fastening them to the wall by screw eyes. The small sizes are really prettier for ornaments, and form, when decorated, charming little souvenirs of the woods, and serve to refresh the memory of many happy times spent in the country.

The fungi are generally of a light gray tint, beneath which is dark brown, and by carefully removing parts of this surface with a sharp-pointed instrument, the brown is exposed in beautiful contrast to the natural surface. The better sort of fungi to collect are those showing a surface of four or five inches. Sketch on each with a soft lead pencil any pleasing design suitable for a little etching, owls on a branch, a bit of landscape, the head of a dog or a horse, all are easily done and are very pretty. This done, then go over the pencil lines with a darning needle or a sharp-pointed penknife, scratching off the surface in the fine lines to give the etched effect and show the dark, rich brown beneath. When it becomes necessary to shade, make the scratches broader or closer together to produce a darker effect: This pleasant and profitable enjoyment is easily done, and it is very fascinating.—*N. Y. Telegram.*

QUEER OCCUPATIONS.

A Fashionable Pawn-Shop—How Duplicate Presents Are Disposed of.

In my rambles around this great metropolis I have been surprised at the many methods of making a living. Certainly if one-half the world do not know how the other half live, they just as little know how the other half of the world make their living. There is on Fourteenth street a place which gets its patronage from the very swellest and most exclusive circles of society. The place has no sign, nothing to give it away as a pawnbroker's shop, but such it is, notwithstanding its handsome entrance and liveried door tender, who ushers the visitors or patrons into an elegantly furnished drawing-room, decorated with rare bric-a-brac and choice paintings. The woman who keeps it, for the proprietor is a woman, is dressed in the latest style and receives her customer as if a guest. It is not until after the usual exchange of morning salutations that she asks:

"What can I do for Madame this morning?"

Then Madame displays a set of jewelry, diamonds, perhaps, or bric-a-brac, on which she wishes a loan. Sometimes a note is given at the rate of fifteen or twenty per cent. These notes, however, seldom go to protest, for the givers do not care to have these transactions known to their husbands; but, apart from that, they care but little, as it is generally understood that a rich woman frequently exceeds her allowance and makes it up on the next, while the obliging broker makes a good profit from the necessities of fashionable women.

The "duplicate gift" woman who calls at the handsome "brown front" house just after a fashionable wedding, is known to the neighbors, who see her descend from a carriage or barouche, only as a caller, but she makes quite a living buying up the duplicate gifts. Every one knows that the wedding gifts of a season run in grooves, and that most brides, on looking over their possessions find a large proportion of their gifts duplicated. The bride who wept herself ill on finding that she had seven butter dishes, every one alike, with a cow on the cover, had not the advantage of the bride of to-day, who calls to her aid the buyer of such duplicates.

One of the popular brides of last season found among her 700 wedding presents 15 silver-plated candlesticks, 3 bronze busts of Shakespeare, 4 etchings of Millet's "Angelus," 10 silver hand mirrors, 3 engravings of one picture, 8 fish knives, 23 pickle and olive forks, 16 fans, 14 jewel boxes, 8 bon-bon boxes and 7 table crumb knives. What did she do with them? The exchange woman came to her aid and took most of the duplicates off her hands. Of course they were disposed of at a sacrifice and the young bride worried for weeks for fear the transaction would leak out, but what could she do? She could not litter up her room with duplicates. I think it would be a good idea, when one is sending out invitations for a fashionable wedding, to add to each what one is desired to present, or else to do away with gifts by saying: "Gifts not desired." I am sure either method would save any amount of annoyance to both giver and receiver.—*N. Y. Cor. Detroit Tribune.*

Eight Short Fashion Notes.

Large velvet collars are a conspicuous feature of the winter wraps.

But few of the corsages of the present time show a visible fastening.

Handsome cloth costumes are made with a Directoire redingote of one color opening over a skirt of another.

Quaint Gretchen cloaks for little girls are in fashion.

Favorite designs in the new brocades are leaves of every possible shape conveniently arranged.

Persian cashmere silk with an imitation astrachan border is converted into novelties.

Dainty little caps of embroidered silk are taking the place of the lawn caps worn by the babies during the summer. Wide strings of hemmed and embroidered surah replace those of lawn.

Some of the most elegant of the winter cloaks are very long, and are made of the new cloths—matelasse velvet or plush—*N. Y. World.*

—There is a story now circulating to the effect that a good man living not a hundred miles from Belfast attempted some missionary work Sunday on a few wicked horsemen who were speeding their trotters on the track. He drove out to the race course and found these Sabbath breakers engaged in trotting one of the liveliest heats he had ever seen. He was interested in the race, but his zeal in saving these lost sheep was unshaken, and he drove on to the track to expostulate and plead with them. As they didn't evince any desire to stop and talk when they came round he started in pursuit, and, having a good nag, came into the finish a close second. We have been unable to get a summary of the subsequent races, but, according to a Belfast horseman, the good man proved himself a cool driver and an opponent to be dreaded in a horse race. —*Bangor Commercial.*

—Magistrate (to prisoner)—"It's some time since I saw you here, Uncle Rastus." Uncle Rastus (virtuously)—"Yes, sah, I'se been quiet an' law-abidin' since de larst time I was up befo' yo', an' dat were more'n six months ago, yo' honnah." Magistrate—"Ah, yes, I remember; I gave you six months for stealing a ham. It's a year this time, uncle."

EVAPORATING FRUIT.

An Expert Gives Some Suggestions as to the Best Methods.

S. W. Lovell, of New York, an expert in evaporating fruit, gives some excellent suggestions. He says our grafted varieties of apples will yield six to eight pounds of evaporated fruit to a bushel of green apples weighing fifty pounds. A paring machine is essential, and he prefers one that pares, cores and slices at the same time. There are several good ones. Two girls with a machine will prepare thirty bushels in ten hours. Machines must be kept in perfect order. Bleaching with sulphur should be discouraged, he says, but bleaching of some kind will be practiced for some time yet. Apples and peaches must be put into the bleacher as soon as pared. To keep the color of fruit until it can be bleached, run it from the parer into a vat of brackish water—not too salty, as the dried fruit would then gather moisture and damage it.

"Spread the fruit for drying on trays made of No. 5 galvanized wire cloth. Care must be taken not to leave the fruit in the evaporator so long as to turn it brown. I take out the fruit rather early and spread it about ten inches deep on a curing floor, where it lies for ten days or two weeks, and is shoveled over once or twice before packing. In this way one can take fruit from the dryer while it is still quite damp, saving fuel and increasing the working capacity of the machine. We also get a more marketable quality of fruit, for the color will be better.

"Evaporated apples in ring slices are packed for Eastern markets in boxes holding fifty pounds. Two pieces of paper placed in the boxes next the cover, and laid so that they will fold back each way from the center, lapping down on the side of the box, and then the ring slices are laid in rows on the paper, with one-half lapping so as to make a nice facing; then the box is filled from the bottom, and if the fruit is thoroughly dried a press is necessary to get fifty pounds into the boxes commonly used. Ripe peaches must be prepared by hand; spread on trays with the flat sides next the wire, and bleached like apples. They are packed in twenty-five pound boxes. I do not fully dry berries, but finish in the curing room, shoveling them over a few times. Four pounds of black raspberries will make a pound of dried fruit. A bushel of peaches will make eight to ten pounds."

Mr. Lovell says the waste can be made into vinegar worth $3 a barrel. He does not speak encouragingly of "cook-stove evaporators" for market purposes, but thinks a well-organized establishment, properly managed, is profitable. Western New York markets, at the writing, were offering 6 cents for prime apples, equal to 8 cents in New York City.—*St. Paul Globe.*

TO CURE DIPHTHERIA.

Turpentine Said to Be Almost a Specific to the Disease.

We have on several occasions referred to the use of turpentine in diphtheria. Recommended originally in Germany and claimed to be almost a specific, it was there, also, that the employment of the drug was subjected to the most severe criticism. Some recent publications have again drawn attention to the alleged value of this substance, and most remarkable among these is an article which appeared in the *Therapeutische Monatshefte.* The author asserts that he has employed turpentine in diphtheria for the last four years. In that time he lost only five cases out of sixty that came under treatment. Two of the fatal cases concerned infants, who appeared moribund when first taken, and died a few hours later. The other fatal cases were also unusually severe from the start, two dying in thirty-six hours, and one surviving five days. This is certainly a noteworthy record, as diphtheria statistics go. The oil of turpentine was administered in dram doses three times a day. Sweet spirits of niter was used as a corrective, in the proportion of one part of the spirits to fifteen of turpentine. Symptoms of intoxication were never observed by the author. In addition to the turpentine, a 2 per cent solution of sodium salycilate was given every two hours in tablespoon doses. A gargle of chlorate of potash solution was likewise employed whenever possible. Under this plan of treatment rapid amelioration of local signs and constitutional symptoms was observed. Usually improvement began at once, and it was rarely necessary to push the drug beyond five or eight doses. It should be remarked in this connection, however, that a very generous and stimulating fluid diet (strong broth, port wine, milk) formed a feature of Dr. Roese's plan of treatment. Those who are inclined to be skeptical in regard to the utility of medicines in the severer forms of diphtheria (and the profession contains many such) will scarcely accept the author's figures without a challenge. On the other hand, for the very reason that violent diphtheria ordinarily justifies so gloomy a prognosis, we are ever ready to employ any means which may possibly reduce its frightful mortality. There is no reason, therefore, why the turpentine treatment of this disease should not be given a fair trial.—*Medical Record.*

—A wonderful real estate dealer does business at Gladstone, Mich. He won't sell a lot unless the buyer signs a forfeiture contract not to allow whisky selling on the premises.

—In Boston the neck of a chicken is called Napoleon, beause it is the bony part.—*Albany Union.*

PRIVATE HOSPITALS.

The Latest Freak for Wealthy Patients and Scicentific Explorations.

The latest professional fad in this city is the private hospital idea, which threatens to become a craze. Almost every eminent surgeon has one or more private houses turned into hospitals for the reception and treatment of patients who can afford to pay extensive prices. These houses, which are usually elegant dwelling houses situated on Fifth, Madison or Lexington avenues, are furnished in the most luxurious style. The doctor has his office in the library. The parlor is made into an elegant reception room. The chambers and all other available rooms are fitted for patients of wealth. One room is set apart for the use of the doctor's assistants, usually young medical graduates who are glad to give their time for their living and the experience obtained. The most important part of the establishment is the patient, who must of course have plenty of money, and may be male or female. The complaints of both sexes are treated, though not usually in the same house. And these surgical retreats offer the inducement of perfect privacy to all their patrons, which is one secret of their success. As may be surmised from what has been said, many of the patients are people of means who do not wish their friends to know of their illness, and who have strong reasons for secrecy.

The first private hospital started in this city was that of a well-known gynecologist and obstetrican. In this establishment the diseases of women are exclusively treated, and the cost to each patient is about $1,000 a month. There are often thirty or forty inmates, seldom less than ten or fifteen. So it will be seen this first venture was a success. If all the private hospitals for the treatment of women were of the same order, it would be a matter for public congratulation, but of the hundreds that have been opened by many doctors of doubtful schools of characters the majority are not above suspicion. Some of these private affairs are really the laboratories of human vivisectionists. More than one famous surgeon who has a hospital at his command sends the best of the hospital's cases to his own establishment, where he can experiment undeterred by the supervision of human lay-trustees and other hospital officers.

A certain surgeon desired to obtain a large number of cases of abdominal section, a few years ago, and resolved to perform laparatomy whenever he could obtain a patient on whom there was the smallest excuse for this, the most difficult and deadly of all operations. He was one of the surgeons-in-chief of one of our largest hospitals, and proceeded to operate on the institution's charity patients on the slightest provocation. Before long the number of deaths from abdominal section in the hospital engaged the attention of the trustees, and the surgeon was summoned—privately, of course—before the board. After a long hearing they failed to agree as to whether or not he had abused his powers; but they agreed to forbid him in future to perform a capital operation without all the surgeons of the hospital concurred and were present. He had not yet obtained the scientific data that he desired, so resorted to the private hospital idea. He purchased a large house on Thirty-fourth street and fitted it up for a private hospital. Here he could, untrammeled, cut up his victims and obtain his scientific data. Here he sent all patients whom he could feel justified in operating on. Here he has slain his hundreds, and will slay his thousands before he gets done; then he will publish a book on abdominal surgery that will make him famous. As he is a wealthy man and can spend any amount of money to attain his ends, and works strictly within the letter of the law, nothing can stop him in his death-dealing career.

This is but one instance. There are many others. It is in these laboratories of science that most of the surgical sensations that appear in the public press originate.

There is one advantage gained by them, however: that is they are the best possible schools for the advancement of surgical science. "Talk about cutting up dogs and cats! Why, we cut up men—the worthiest animal for vivisection!" Such were the words, perhaps over enthusiastic, which the writer heard one of these students of anatomy utter.—*N. Y. Cor. St. Louis Globe-Democrat.*

In the Dry-Goods Store.

A lady and her little daughter were shopping. The child sat on a counter-stool and watched the people coming and going. Presently she saw a lady elegantly dressed, who stopped at their counter and handed a waterproof and ambrella to the young girl in charge.

"Take care of these things until I call for them," she said in an autocratic tone. Then she sailed away.

The bright eyes of the child followed her. The little face wore a look of distress.

"Why, mamma," she whispered, "she didn't even say please."

Sooner than she expected to, the lady returned.

"I will take my things," she said.

There was some little delay in finding them.

"I hope you haven't lost or misplaced them," she said in a severe tone to the young girl.

No. Here they were. Madame took them cooly and without a word walked off.

This was more than the child could stand. Leaning over so that her sweet young face come close to that of the girl clerk she said, sweetly; "Thank you!"—*Detroit Free Press.*

Public Notice

Is hereby given that unless the foregoing taxes and costs are paid I will on

Tuesday, The 26th Day Of February, 1889,

Between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m., commence to sell the foregoing described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day, according to adjournments, until the whole real property described in the foregoing, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 21 day of February, A. D. 1889.

J. R. ELDRED,
Tax Collector of Inyo county, California.

DESERT LAND FINAL PROOF.

D E No. 755.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., January 31, 1889.

Notice is hereby given that Frederick Albers, of Independence, Inyo county, California, has filed notice of intention to make proof on his desert land claim No. 255, for the N W ¼ of N W ¼ of Sec. 23 Tp. 14 S., R 35 E. M D M, before the Register and Receiver of this office at Independence, on Monday, the 11th day of March, 1889.

He names the following witnesses to prove the complete irrigation and reclamation of said land: John Meyer, William Meyer, John Kesperi and Fritz Zweimeier, all of Independence Inyo County, California.

JOHN W. P. LAIRD,
o j26 Register.

FINAL PRE-EMPT. ON PROOF.

D. S. No. 1383.

LAND OFFICE AT INDEPENDENCE, CAL. JANUARY 14, 1889.

Notice is hereby given that the following named settler has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before the Register and Receiver of this office at Independence, on February 25, 1889, viz: CHARLES A. SKINNER, Pre emption D. S. No. 1383, for the S E ¼ of S W ¼ of Sec 13, N E ¼ of N W ¼ of Sec 24, tp 14 S, R 35 E, M D M.

He names the following witnesses to prove his continuous residence upon and cultivation of said land, viz: William H. Jenkins, Thomas B. Scovil, Hiram C. Hamilton and Augustus C. Stevens, all of Independence, Inyo Co., Cal.

JOHN W. P. LAIRD, Register.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

SATURDAY, FEBRUARY 23 1889

MARRIED.

MOORE—PARKER—At the residence of the bride's parents, at Porterville, Feb. 12, 1889, by Rev. Mr. Belknap, Fred T. Moore, of Stockton, and Miss Effie A. Parker, formerly of Inyo county.

BORN.

COLLINS—At Polets, Feb. 17, 1889, to Mr. and Mrs. George Collins, a son.

DIED.

MUSGROVE—In Carson City, February 17, W. R. Musgrove, a native of Carson, aged 24 years, 10 months and 10 days.

Bar silver is quoted at 93.

Mountain Harry is in town.

Mr. B. F. Leete, of Reno, was in town this week.

See the card of Dr. F. E. Bunting, of Lone Pine.

It takes two to tell a lie—one to speak and one to listen.

The Board of Education has been session during the week.

Explorer Stanley is again reported to have been killed.

A patent has been issued to Jim Vaughan for a homestead at Round Valley.

Charley Medbury came up from Keeler on Thursday returning next day.

The G. A. R. Department Headquarters will be removed from San Francisco.

J. C. Irwin and wife have gone to Big Pine to attend the celebration there.

Miss May Shepherd has been visiting in town with her sister, Mrs. J. J. Gunn.

It is wise not to seek a secret and honest not to reveal it.—*Burmese Proverb.*

T. C. Boland is having considerable fencing done on his ranch near Lone Pine.

The case of the People vs. S. A. Middleton will come up for trial next Thursday, the 28th.

D. Gill is having a house built on his place near the Lewis ranch, at Camp Independence.

Politeness is like an air cushion. If there be nothing in it, it eases our jolts wonderfully.

Messrs. H. M. Yerington and R. J. Laws were in Independence at the end of last week.

Dick Whittaker came in from the Maxim on Thursday to attend the G. A. R. Ball at Lone Pine.

Mrs. W. K. Miller and Mrs. S. Decker, of Lone Pine, were visiting at Independence during the week.

Messrs. W. S. Enos and John Baxter went to Lone Pine on Wednesday evening to attend the public meeting there.

J. G. Dodge is putting up a new building near his livery stable, at Lone Pine, to be used as a blacksmith shop.

Henry Cartier returned on Wednesday from a visit through the lower country. He says Inyo is good enough for him.

Serious charges are preferred against Warden McComb, of the State Prison, at San Quentin. A complete investigation will be held.

The proposed lottery scheme has been defeated in the Nevada Legislature. The bill was iniquitous and an outrage on modern civilization.

Independence is quite a deserted camp, so many of the townspeople having gone to Lone Pine and Big Pine to attend the celebrations at the two places.

During the last fiscal year the sum of $8,509,363 54 was paid into the State Treasury, being an increase of nearly $2,000,000 on the year before.

Wonder if John Barnes, of Keeler, will give a 17th of Ireland ball this year? Finnigan's wake wasn't a marker to the good time enjoyed at Keeler last year.

The Garfield mines, during the month of December produced $10,000. Three hundred and eighteen tons of ore were crushed and the operating expenses were $8,400.

Mr. S. A. Densmore has purchased the Captain's Quarters at the Post and will remove the building to town. He has bought two lots on Edwards street and will erect a handsome residence.

Gus. Stecker has been at work during the week making alterations in the Court House. The room formerly occupied by the Assessor has been connected with the District Attorney's office. The Assessor and Surveyor will occupy the same office.

Rev. E. McEvers will preach to-morrow (Sunday) at the school house at Lone Pine at 10:30 o'clock a. m., Sunday School at 11:30 a. m. At the M. E. Church, Independence, a 7 o'clock p. m. Sunday School at 11 a. m.

McTigue, who was tried in Esmeralda county, Nevada, last week for the murder of Charles Lenaman, a clerk in the post-office at Silver Peak, was convicted of manslaughter and sentenced by Judge Rising to ten years in the State Prison.

Henry Z Osborne, of the Los Angeles *Express* and former editor of the *Free Press*, of Bodie, is prominently spoken of as a candidate for the appointment to the office of U. S. Printer. He is every way qualified for the position.

Henry Harris arrived from San Francisco on Wednesday's train on a visit to his uncle, Mr. L. Wood. It has been nearly five years since he left here and the place has changed very much since then. He will remain about a month.

John Dunlap will make a visit to Independence next week from Bishop, and all persons desiring harness work done will have an opportunity to do so without sending away. Mr. Dunlap is a good workman and his charges are reasonable.

PUBLIC MEETING AT LONE PINE.

A public meeting was held at Lone Pine on Wednesday evening for the purpose of discussing the present condition of the county and to consider the resolutions passed at the Bishop Creek meeting. The leading citizens of the vicinity were present and also a deputation from Independence. The meeting was called to order by G. H. Palmer, R. C. Spear acting as secretary. It was moved and seconded that the resolutions passed at Bishop should be endorsed. The question being open for debate it was then discussed at length by a number of gentlemen present. In regard to the establishment of a stage and mail line the feeling was strong and unanimous in favor of the proposition. In regard to a freight line it was argued that much inconvenience and perhaps financial loss would result from the signing of agreements by which merchants should be compelled to patronize such freight line exclusively. That the railroad would practice retaliation and raise the rates on ore, thus seriously crippling if not destroying utterly our leading industry. In reply to this it was argued that the move now made on the part of the people of Inyo county is not made through a spirit of perversity or bitterness. That this united action on the part of our citizens is not of our own seeking but has been inevitably forced upon us. That, as in all revolutions, the causes giving rise thereto are not of sudden growth, but have been gradually drawing their chains of oppression tighter around us. The general uprising is not a fight, not antagonistic to the railroad, but a forced struggle for self preservation. Our people are generous and willing, nay eager to give the railroad managers due credit for every favor received. We grant that the road does ship ores at a rate that renders practicable the working of many mines that otherwise would be shut down. But it is impossible to point to a single miner in the county who is acquiring a fortune, or even earning a competence. When the road was built it was solely for the development of the mines. The agricultural interests of the great valley were given no consideration whatever. It was constructed where there were no settlements, entirely through unoccupied lands, and from three to seven miles from our towns. From the time the road was built to the present day whenever produce could be shipped in at a small margin of profit freight rates were cut to the lowest notch; while at the same time necessary articles were charged an exorbitant rate. We grant that this was necessary in order to pay running expenses; but is the farmer entitled to no consideration? The fear of increased rates on ore is groundless. The tariff now charged is all the ore will stand, and the policy pursued throughout has been that of "get all we can." Every miner in the county is the bond-servant of the railroad company. The tariff is so regulated that a sufficient margin alone is left to buy the necessaries of life and the means of continuing operations. It is needless to state that the sole aim of this move is to force a southern outlet. The railroad managers, through their mouth-piece, have said that they will not extend, implying that we are powerless and must continue as we have heretofore, to struggle along a precarious hand-to-mouth existence. There are four elements that enter into this question: The merchant, who will be benefited by an increase of population and of business; the farmer, who will secure a market for his produce; the teamster, who obtains work for his stock, and the miner more than all, will be enabled, by a reduced freight rate and cost of refining his ore, to make something more than a bare living. The hired organ of the railroad company recognizes the fact that a great struggle is now in progress and implies a doubt as to who will succeed. There is no question. Natural causes backed up by the persistent effort of the entire people will accomplish the desired end. Again let it be repeated that this is not an aggressive fight. We wish the railroad every success and sincerely hope that they may receive good returns from their enterprise, but to attain that end we will not, cannot, be longer ground beneath their juggernaut wheels of oppression. The motion was thereupon put and carried. It was also resolved to request the Inyo County Board of Trade to hold a meeting on the 28th inst. and circulate a petition for a daily mail from Mojave to Olancha, from which point there is no connection with Los Angeles. After some further discussion relative to the general interest of the county, the meeting adjourned.

Board of Education.

The Board of Education met in regular session at Independence on Tuesday last. There being no applicants for examination the Board finished up their business the next day. The following were granted certificates on credentials: Annie Kohler, Normal School diploma; Wm. Kermode, life diploma; W. A. Brooks, Primary grade, certificate from Sacramento county; G. H. Hardy, Normal School diploma; Lewis Goble, life diploma; C. W. Rathbun, life diploma. Ordered that the State list of library books be added to the list of library books of Inyo county. Charges were preferred against C. Hampton and he was cited to appear at next regular meeting to show cause why his certificate should not be revoked. No further business appearing the Board adjourned.

Smallpox in Carson.

The smallpox has broken out in Carson, Nev., in the Ormsby House, the family of the proprietor, D. Keyser, having been taken with what was thought to be chicken-pox, but proved to be smallpox of the worst type. Two of Mr. Keyser's daughters, one a beautiful girl of 21, have died. It is feared the scattering of the boarders will spread it over the town, and great excitement prevails. Schools and places of amusement have been closed; the legislators have sent their families home, and the Indians have fled from the town.

Pete Musgrove Dead.

Peter Musgrove, the well-known young athlete of Carson, died in Carson Sunday of pneumonia. Pete was a splendid specimen of physical development. He was wiry, strong, active and swift of foot, and always joyful and kind to all.

Entitled to the Best.

All are entitled to the best their money will buy, so every family should have, at once, a bottle of the best family remedy, Syrup of Figs, to cleanse the system when costive or bilious. For sale in 50c and $1 00 bottles by all leading druggists.

A new picture gallery has been started in the Norman House. Some very fine specimens of artistic skill are well hung for observation.

Some very fine specimens of gold ore from the Hope mine can be seen at Rhine's store.

CORRESPONDENCE.

ED. INDEPENDENT.—The funny man of the Virginia City *Enterprise* (a very appropriate name?) attempts to ridicule my article against annexing the Eastern Slope counties by drawing attention away from the arguments advanced—that is, of interest to farmers and business men on this side of the mountains, viz, the question of taxation. About a year and a half ago, on my way to the valley beyond the mountains I was introduced to a lady from Virginia City who told me that she had bought three houses in that city for forty dollars, but that she had sold them again for the same money for the reason that she could not afford to hold them and pay the taxes. The property for which she paid forty dollars was assessed at three hundred dollars, and the tax, of five per cent. amounted to fifteen dollars, which was more than one-third of the entire investment. She also told me of property that had cost $27,000 being sold for one thousand dollars. I was also told that the International hotel had been offered for five thousand dollars; I do not vouch for its truth. With these facts in view is it any wonder that men who have anything to lose should hesitate to accept the invitation to "Walk into my parlor," etc.? Or is it wonderful that Nevada does not attract, as does the Golden State, for permanent homes? While many people of the former State believe it would be better to throw off her Statehood on account of sparseness of population and means of resource. And the latter State, or a portion of it, is considering the question of two States, with population and revenue ample for both. I do not deny my pride of being a Californian, or of Inyo county, with her immense natural resources the equal of any county in the State except in capital and population. Whose hidden treasures in minerals, soda, marble, and farming and grazing lands are just becoming known. And which will in the near future place her side by side with her sister counties and still enjoy the "glorious climate" of California. Then she will become an important factor in directing California's progress; which she could never do as a part of Nevada, for the elements of progress are not in that State. With the exception of Carson Valley, Reno and one or two smaller localities I do not believe that there is one in ten (to put it very mild) who contemplate making Nevada their permanent home, or who will stay any longer than to accumulate enough to live somewhere else. The evidence of this is that nearly all the wealth is owned out of the State and the many who have smaller means are compelled to shoulder the expense of the "elephant" and have to grin and bear it. Again, those who have money keep it where it will not be eaten up in a few years by taxation; and where they can live better and enjoy more at a much less expense. For me, whether in Inyo or Sacramento, Shasta or Los Angeles, the "glorious climate" and the glorious future of California are good enough for me and for my children. So mote it be.

Young or middle aged, married or single, sick or well, it will benefit you. Address, PEABODY MEDICAL INSTITUTE, WHITTIER, Cal.

THE LAND OF LAKES.

An English Traveler's Impression of the Province of Finland.

Finland is, in the language of the country, Suomesimaa, "the land of lakes," and this is really the truth, as no less than one-third is under water. Much of this is, however, marsh land, though the lakes Saima, Lodoga, Enare, etc., cover some thousands of square miles. The surface of the country is flat, with a chain of low hills about the center, the highest of these being the mountain "Aavasaksa." The coasts are deeply indented and picturesque, with bold granite cliffs standing clear out against the deep blue sky, and many islands belonging to the Archipelago of Aland dot the surface of its western waters. Inland there are dense forests of pine, fir and birch, which have a strange and enthralling influence upon the imagination. Notwithstanding their usually somber aspect, there are innumerable pleasant glades in the recesses of these woods, where the tall white-stemmed birch and great boulders covered with lichen crop up from the grass and form a pleasant picture; besides this the lakes have a beauty—solemn and romantic—which can scarcely be found elsewhere. The landscape, too, dotted with numerous windmills, and the church towers, built apart from the places of worship, present strange pictures. From these towers the night watchmen sound their horns or play upon triangles as an alarm of fire. Often in the dead of night a great blaze on the horizon will tell of some forest fire. These are mainly owing to the carelessness of the peasantry, and, combined with the great exportation of timber and its lavish use for firewood and for building purposes, have caused a great rise in its value within the last few years. Traveling in the country, though cheap, is not always pleasant. Many of the roads are what would be described as "corduroy"—that is, having rough logs laid across, over which one's vehicle bumps and jumps in a manner calculated to make the bones sore for a considerable time after a journey. The velocity with which the natives send the carriage down hills is also likely to try the nerves of any not to the manner born. Most persons posting through Finland have their own vehicles—wheeled ones for the summer and sledges for the winter—and they change horses at each stage of about fifteen versts (ten English miles). Should you have to trust to the post-house for a conveyance you are more likely than not condemned to travel in a cart without springs and a hard seat with no back to it or an ordinary work sledge. The charge for posting is little enough, being ten Finnish pennies (1d English) per verst, and the driver is required by law to take you at the rate of one Sweedish or seven English miles per hour.—*Cornhill Magazine.*

THE HANDSOME MAN.

What Constitutes One According to Fanny Fern's Critical Mind.

Well—in the first place, there must be enough of him; or, failing in that—but, come to think of it, he mustn't fail in that, because there can be no beauty without health, at least according to my way of thinking. In the second place, he must have a beard; whiskers—if the gods please, but a beard I insist upon, else one might as well look at a girl. Let his voice have a dash of Niagara, with the music of a baby's laugh in it. Let his smile be like the breaking forth of the sunshine on a spring morning. As to his figure, it should be strong enough to contend with a man, and slight enough to tremble in the presence of the woman he loves. Of course, if he is a well-made man, it follows that he must be graceful, on the principle that perfect machinery always moves harmoniously; therefore you and himself and the milk pitcher are safe elbow neighbors at the tea table.

This style of handsome man would no more think of carrying a cane than he would use a parasol to keep the sun out of his eyes. He can wear gloves, or warm his hands in his coat pockets, as he pleases. He can even commit the suicidal gaunty-act of turning his outside coat collar up over his neck of a stormy day with perfect impunity. The tailor didn't make him, and as to his hatter, if he depended on this handsome man's patronage of the "latest spring style," I fear he would die of hope deferred; and yet—by Apollo! what a bow he makes, and what an expressive adieu he can wave with his hand! For all this he is not conceited—for he hath brains.

Put your conventional handsome man of the barber's window-wax-figure-head pattern; with a pet lock in the middle of his forehead, an apple-sized head, and a raspberry mustache with six hairs in it; a pink spot on its cheek, and a little dot of a goatee on its cunning little chin; with pretty blinking little studs in its shirt-bosom, and a neck-tie that looks as if he would faint were it tumbled, I'd as lief look at a poodle. I always feel a desire to nip it up with a pair of sugar-tongs, drop it gently into a bowl of cream, and strew pink rose-leaves over its little remains.

Finally, my readers when soul magnetizes soul, the question of beauty is a dead letter. The person one loves is always handsome, the world's arbitrary rules notwithstanding; therefore when you say, "what can the handsome Mr. Smith see to admire in that stick of a Miss Jones?" or "what can pretty Miss T see in that homely Mr. Johns?" you simply talk nonsense, as you generally do talk on such subjects. Still, the parson gets his fees, and the census goes on all the same.—*Fanny Fern, in the N. Y. Ledger.*

BEST TIMES TO PLOW.

Rules Applicable to Various Portions of the United States.

No general rule can be given on this matter that will be applicable to all parts of the country and to all kinds of land. It is generally agreed that the proper time to break prairie sod is in the early part of the summer. The roots of wild grass can be cut the easiest at that time and the sod rots more quickly than if turned in the fall or spring. Most farmers of long experience advocate fall breaking for land that was seeded to timothy and clover and has produced a crop of hay for several years. They hold that many of the grass roots are dead and that their decay will be hastened if the sod is inverted and the green grass be mixed with them. By turning such a sod in the fall it will become warm before planting time in the spring. If the soil is largely composed of clay the alternate freezing and thawing will greatly benefit it. It is best to plow such lands before heavy frosts occur that will kill the grass. If the land is to be planted to corn it will be necessary to pulverize the surface with a harrow, but the soil which is a few inches below will be in a loose condition on account of the roots and foliage of grass which it contains.

If the sod is tender, however, being composed chiefly of the roots of clover and timothy, it will be best to defer plowing till a few days before planting corn. A sod of this kind rots very rapidly and the clover and grass, which will be several inches high, will be of great value in producing a crop of corn. The plowing must be so well done as to cover every stick and leaf and thus insure their decay. It is better to plow hill-sides in the spring, as washing during the winter is prevented. In the East, where the farms are generally small, the plowing can all be done at the time that experience shows to be the best for insuring the largest crop. In the West, however, most farmers find that they must employ most of their time in plowing from the close of the harvest till the season of planting, stopping only while the frost renders work impossible. If they do but little plowing in the fall they will have but a few acres to plant and sow, as the springs are generally unfavorable for working the soil.—*Chicago Times.*

HINTS ON VENTILATION.

Several Methods of Securing Good Air in Sleeping Rooms.

In ventilating—say a bed-room—by means of the window, what you principally want is an upward-blowing current. Well, there are several methods of securing this without danger of a draught:

1. Holes may be bored in the lower part of the upper sash of the window, admitting the outside air.

2. Right across the foot of the lower sash, but attached to the immovable frame of the window, may be hung or tacked a piece of strong Willesden paper—prettily painted with flowers and birds if you please. The window may then be raised to the extent of the breadth of the paper, and the air rushes upward between the two sashes.

3. The same effect is got from simply having a board six inches wide and the exact size of the sash's breadth. Use this to hold the window up.

4. This same board may have two bent or elbow tubes in it, opening upwards and into the room, so that the air coming through does not blow directly in. The inside openings may be protected by valves, and thus the amount of incoming current can be regulated. We thus get a circulating movement of the air, as, the window being raised, there is an opening between the sashes.

5. In the summer a frame half as big as the lower sash may be made of perforated zinc or wire gauze and placed in so as to keep the window up. There is no draught; and if kept in position all night, then, as a rule, the inmate will enjoy refreshing sleep.

6. In addition to these plans, the door of every bed room should possess at the top thereof a ventilating panel, the simplest of all being that formed of wire gauze.

In conclusion, let me again beg of you to value fresh air as you value life and health itself; and, while taking care not to sleep in an appreciable draft, to abjure curtains all round the bed. A curtained bed is only a stable for nightmares and a hotel for a hundred wandering ills and ailments.—*The Family Doctor, in Cassell's Family Magazine.*

The Power of Kindness.

Elihu Burritt, speaking of the power of kindness, says: There is no power of love so hard to get and keep as a kind voice. A kind hand is deaf and dumb. It may be rough in flesh and blood, yet do the work of a soft heart and do it with a soft touch. But there is no one thing that love so much needs as a sweet voice to tell what it means and feels; and it is hard to get and keep in the right tone. One must start in youth, and be on the watch night and day, at work and play, to get and keep a voice that shall speak at all times the thoughts of a kind heart. It is often in youth that one gets a voice or tone that is sharp, and it sticks to him through life, and stirs up ill-will and grief, and falls like a drop of gall upon the sweet joys of home. Watch it day by day as a pearl of great price, for it will be worth more to you in days to come that the best pearl hid in the sea. A kind voice is to the heart what light is to the eye. It is a light that sings as well as shines.

—How lonely the mother feels when for the first time her boy shows that he feels too big to be kissed! As they begin to feel like little men, too many boys thing that any show of affection on their part is babyish; they are afraid of being called "girl-boys" or milksops. Just as if a man is ever more manly than when he loves and protects the mother who loved and protected him through so many helpless years. Such a boy is sure to grow into the man who takes such good care of his wife.—*Rural New Yorker.*

—The young men and women who can look poverty fairly and squarely in the face, are too few. We want more of the young men who can wear old clothes till they can pay cash for new ones, or who are willing to walk till they can afford to ride. We want more of the young women who are willing to do their own work till they can afford to pay somebody to do it and who will live uncomplainingly in one room till they can afford to furnish two

NATURE OF FOODS.

The Difference Between Nitrogenous and Carbonaceous Articles of Diet.

Foods that supply material for growth and repair are called nitrogenous foods. They are also called proteids, from a Greek word meaning "first," because in the living cells which are the first principle or form of life there is always nitrogen. A common name is albuminous foods. Albuminous substances exist in many forms, and are called by different names in different things. They are found largely in meat, fish, milk, peas, beans and grains. The albumen and fibrin in the juices and flesh of meat and fish, and in the juices and membranes of some vegetables and fruits, the casein in milk, the vegetable casein in peas and beans, and the gluten of grains, are all forms of nitrogenous substances, or proteids.

The carbonaceous foods are fats, including butter, the fat of meat or fish, oils, eggs, and some kinds of cheese. A small amount of fat is necessary in digestion, and indispensable to perfect nutrition. Starch and sugar as found in vegetables and fruits are also fat producing. Fats from the principal material of certain tissues giving rotundity and beauty to the form and being non-conductors of heat, keep the body warm. An undue accumulation of fat is a species of disease and is often dangerous.

Thus we see that the solid part of the flesh and blood is largely fibrin and albumen, substances similar to the fibers and juices of meat and fish, and that eggs, milk, peas, beans and grains also contain fibrin and albumen, and it is from these nitrogenous foods that the bodily substance is chiefly built up.

Age, occupation, climate and our finances should influence our choice of food. Persons whose occupations tax their muscular strength often think that they require a great deal of meat, when there are many foods that contain as much as, or more, proteid matter than meat, such as peas, beans, cheese and grains.

Animal food is better diet for cold weather than for hot. Fat is not digested easily unless exercise is taken. Fruits, vegetables and grains eaten with milk, butter or oil, furnish the carbohydrates needed in summer.

Those who labor or exercise in the open air need a large quantity of wholesome food, and it need not be the most digestible, as they require food that will stay by them.

Persons engaged in sedentary occupations or who take little exercise and live in close, confined rooms, can not digest as much or as easily as those who labor out-of-doors. Those who tax their brain severely should avoid fat. People who consume much starch or sugar are liable to grow fat. As a rule the majority of people eat too much, and between forty and fifty years of age an excess of albuminates is liable to develop heart, liver and kidney troubles, which are more or less akin to dyspepsia. An excess of starchy food or of sugar or fat, causes obesity, not only of the body, but an accumulation of fat about the heart and other internal organs which is liable to prove very dangerous.—*Building News.*

TREAT STOCK GENTLY.

Why It Is Wrong to Worry Animals by Rough Words and Ways.

I have known a great many free-going horses of nervous temperament kept in a continual worry by the rough ways and words of their drivers. They would fret and sweat and grow poor doing the work they would thrive while doing under mild-mannered, considerate control. I have seen a great many heifers and cows in a tremor of excitement while some ignorant or brutal fellow was milking them. I never knew them to be made quiet and willing to be milked by scolding, kicking or pounding; but they might have been made docile by early and gentle handling. It is safe to say that rough usage of cows often occassions the loss of half their milk. They refuse to "give down," and that dries them up rapidly. Boys, dogs and heedless men worry them when driving from the field. Irregular feeding and milking, and every thing out of the regular order, disturbs, and therefore damages them. Change of residence frequently causes cows to shrink their milk for a whole year. A noted Holstein butter cow, taken to the fair to test her butter-making qualities, made only a pound of butter from forty-four pounds of milk, while in the quiet of her home she made a pound of butter from twenty-one pounds and three ounces of milk. Likely she was extra nervous, but all cows have nerves enough to require that their treatment be gentle and regular.—*Hugh T. Brooks, in N. Y. Tribune.*

—In one respect rye is a cheap crop because it requires no land for its growth, to a certain extent. That is, if the seed is sown in the fall on land intended for corn in the spring, and the rye turned in before planting the corn, the rye simply holds the land that would otherwise be unoccupied during the winter. It is also excellent on the land intended for potatoes, and, as it assists in keeping down the weeds, it saves much labor in that respect.

WIT AND WISDOM.

—"One man's conduct may lead a host into a snare; beware how you follow man; the prudent man looketh well to his going."

—Why is it that, whenever you are looking for any thing, you always find it in the last place you look? The reason is because you always stop looking when you find it.

—Young man, don't break in two in the middle if the world goes against you. Brace up and go against the world awhile, and see how quick you can knock it out.—*Washington Critic.*

—The faults and weaknesses of others, instead of being woven into gossip, scandal and useless criticism, should be used as danger signals, to warn us away from the paths which have led to them.

—If the right is not used as a weapon of offense, it is not so likely to need to spend itself in its own defense. And if the wrong is busy neither with its own defense nor with the direct offense against the right, it is more fairly open to see the right as exhibited in the right. It is better to draw one into the right than even to drive him out of the wrong.—*S. S. Times.*

—Hardly any one can step out of his own door without finding something that can be benefited by his good offices. If he sees it aright, and give his heart and hand to it, he will, then and there, be making a contribution to the world's improvement. The talk we hear sometimes about the want of a "field" is proof either of insincerity or poor judgment.—*United Presbyterian.*

—If the problems of the time are properly dealt with, it would be found, at least in our own favored land, that "Poverty and Progress" would not be used as correlative terms by any political economists. Thrift and economy among the laboring classes would go far toward the reduction of waste improvidence and criminal carelessness in regard to provision for sickness and old age; and go far also toward solving the labor problem.—*Mrs. M. J. Gorton.*

Casper Weaver.

Casper Weaver is a German. He was born in Hessen, Germany, in 1832, landed at New York in 1856, lived in Pennsylvania and New Jersey 5 years. From thence he moved to Georgetown, Ky., where he subsequently joined the Confederate army, and became a tried and true soldier of that famous chieftain, Gen. John Morgan, serving through that distinguished revolution which put at rest the question of secession. After the close of hostilities he came with other friends to Waverly, Lafayette County, Missouri, U. S. A., where he still resides, a peaceful, law abiding citizen and good neighbor. A few weeks since he was induced by the solicitation of his friends to join them in pooling chances in the November drawing of the Louisiana State Lottery, by which he has as one of four in the club, come in possession of one-fourth of one-twentieth of the capital prize of $300,000, being the comfortable sum of $3,750. Three others have also received their money which was collected by the Middleton Bank of Waverly, Mo. Their names are Albert Goodwin, William Israel and a colored man named Robert Stewart, all of whom live in this City, and are all well known to our people. They will doubtless in the future as they have in the past continue to be warm friends of that institution which has so wonderfully surprised them all. For the average man, though hopeful is generally disappointed if successful.—*Waverly* (Mo.) *Times*, Dec. 6.

THE "LOUVRE"—SAN FRANCISCO.

Many of our readers are already patrons of this popular resort when in "Frisco" and all lovers of fine restaurant and bar "fixin's" readily become habitues.

ORPHEUM OPERA HOUSE SAN FRANCISCO.

Our readers should not fail to see the great "bill" at this favorite theater on their next "Frisco" visit. A big list of attractions at popular prices.

Silence is golden, and Benjamin Harrison, President-elect of the United States, knows exactly how to manage his surplus.

DOES THE EARTH REALLY MOVE?

Science says that it does, but we cannot help wondering sometimes if there isn't some mistake about it, when we see how stubbornly certain old fogies cling to their musty and antiquated ideas. It was believed once that consumption was incurable, and although it has been clearly demonstrated that it is not, thousands of old-time physicians close their eyes and put their hands to their ears and refuse to abandon the theory. But for all that the world moves on, and Dr. Pierce's Golden Medical Discovery continues to rescue sufferers from consumptives' graves. It is a sure cure for this dreaded disease, if taken in time. All scrofulous diseases—and consumption is included in the list—yield to it.

The Mare Island Navy Yard is to be put in commission for repairing steel ships. It will be a good place for drilling horse marines.

VALUABLE DISCOVERY.

A General of the army, for a number of years stationed in Alaska, discovered that the Indians were using herbs and plants that cured Dyspepsia, Headache, Constipation, Rheumatism, Piles, Asthma, etc. He will send trial package, with directions, to any address by mail, upon receipt of $1.00. Address General Thompson, Lock Box 2440, San Francisco, California.

It is astonishing how many old school-fellows a successful man always finds he used to have.

"PURGATORY BULLETS."

An excited Irishman lately rushed into a Boston drug store, having a "broken-up" appearance generally. "Be jabbers"' he yelled, "I'm all wrong entirely. I want some shtuff to straighten me out. Some o' them 'Purgatory Bullets' will fix me, I'm thinkin'. What do ye tax for thim"? "What do you mean"? asked the clerk. "'Purgatory Bullets,' sor, or somethin' loike that, they call thim," replied the man. "Shure, I'm in purgatory already, with headache, and liver complaint, and bad shtomach, and the devil knows what all." The clerk passed out a vial of Dr. Pierce's Pleasant Purgative Pellets, and Pat went off contented. These little Pellets cure all derangements of liver, stomach and bowels. Sugar-coated, little larger than mustard seeds, and pleasant to take. Druggists.

Murderers sentenced to death in New York now go ohm to dynamo.

The latest French remedy for debility of *any organ* is Dujardin's Life Essence. It is the product of years of experimental study, and is in daily use in the French hospitals, with great success. Price, $1.50 a bottle. All druggists.

SOMETHING NEW.

A new and very effective thing which is taking hold on the market is a valuable discovery made known through The Charles A. Vogeler Co., Baltimore, Md., proprietors of the renowned St. Jacobs Oil, and known as Diamond Vera-Cura, for Dyspepsia, a positive cure for Indigestion and all stomach troubles arising therefrom. If not found in the stock of druggist or dealer, it will be sent by mail on receipt of 25 cents (5 boxes $1.00) in stamps. Sample sent on receipt of two-cent stamp. It has been found on trial to be a specific for sour stomach, heartburn, nausea, giddiness, constipation, nervousness and low spirits, and it is spoken of and recommended by hundreds who have used it and have found lasting benefits.

A Clothes Line—The method of seating visitors in our fashionable churches.

ARE WE TO HAVE ANOTHER WAR?

Some political prophets aver that we shall. Be that as it may, the battle waged by medical science against disease will never cease until we arrive at that utopian epoch when the human family shall cease to be afflicted with bodily ailments. One of the most potent weapons which the armory of medicine furnishes, is Hostetter's Stomach Bitters, which is of special utility as a family remedy, as it is adapted to the immediate relief and ultimate cure of those disorders of the stomach, liver and bowels which are of commonest occurrence. Indigestion, biliousness and constipation are inseparable companions, and these ailments are completely eradicated by the Bitters. But the remedial scope of this superlatively wholesome and genial medicine takes in also nervous ailments, rheumatism and kidney troubles; its action in these, as in the other complaints, being characterized by unequaled thoroughness.

First Texan—Hello, Jack! Did Bill Bloodgo hang up his stocking Christmas eve? Second Texan—Why, you see, Bill was in 'em. Some of us fellows lynched him.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine DR. C. MCLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

Patty says plenty of sleep is the secret of preserving one's beauty. That accounts for Philadelphia having such handsome policemen.

SHALL WOMEN BE ALLOWED TO VOTE?

The question of female suffrage has agitated the tongues and pens of reformers for many years, and good arguments have been adduced for and against it. Many of the softer sex could vote intelligently, and many would vote as their husbands did, and give no thought to the merits of a political issue. They would all vote for Dr. Pierce's Favorite Prescription, for they know it is a boon to their sex. It is unequaled for the cure of leucorrhea, abnormal discharges, morning sickness, and the countless ills to which women are subject. It is the only remedy for woman's peculiar weaknesses and ailments, sold by druggists, under a positive guarantee from the manufacturers, that it will give satisfaction in every case or money will be refunded. See guarantee on wrapper around bottle.

It is rumored that there is an article in preparation for the *North American Review* entitled "The Slow Set at Havard," by a member of the University Crew.

ARM & HAMMER BRAND

To Housekeepers and Farmers.—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons, which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alumina, etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK CHURCH & CO'S SODA ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound package full 12 ounces net, Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

SODA OR SALERATUS

DWIGHT'S SODA THE COW BRAND.

DELICIOUS BISCUITS OR WHOLESOME BREAD

USE

DWIGHT'S COW-BRAND SODA OR SALERATUS.

ABSOLUTELY PURE.

ALWAYS UNIFORM AND FULL WEIGHT.

Be sure that there is a picture of a *Cow* on your package and you will have the best Soda made.

THE COW BRAND DWIGHT'S SALERATUS

My Poor Back!

That "poor back" is held responsible for more than its share of the sufferings of mankind. If your dog bites a man who kicks it, do you blame the dog? On the same principle the kidneys utter their protest against nervousness, impure blood, and resulting constipation. These force them to do extraordinary work in ridding the system of the poisons which are the result of effete matter retained in the blood. Then the sufferer says the back aches; the kidneys are diseased. "Not yet;" but they will be unless the nerves are strengthened, the blood purified, and the constipation removed. These are the causes of kidney troubles, and Paine's Celery Compound removes them quickly. With its tonic, purifying, and laxative effect, it also strengthens the weak kidneys, making it almost infallible in curing all diseases of the nerves and kidneys. If your hopes of cure have not been realized, try Paine's Celery Compound; it gives perfect health to all who complain of "their poor backs." *Price $1.00.*

AN OLD CHURCH.

History of the Old Swedish Meeting House, Erected in 1698.

The most interesting feature of Wilmington is the old Swedes church, standing on the outskirts of the city, near the Christina, just above the rocks where in old days Minuit planted his fort. I am of opinion that we have no church quite so interesting, as regards age, origin and architecture. It is probably the oldest which remains exactly as it left the hands of its builders; "1698" is the date in iron letters on the west gable. The building stands in a wide place of graves, a little back from Christina creek and a mile west of the Delaware. The church is built of gray stone, sixty feet long, thirty feet wide and twenty feet high. The walls are six feet thick at the base and three feet at the windows. There are five of the latter, large, and arched in the style of the old Norman, as are the three heavy doors. There are inscriptions on all four sides in iron letters set into the walls, the main inscription being on the west gable.

Within the church is as quaint and old as when Dutch Peter, the battle scarred sexton, hauled live coals from the old cannon stove upon the brick floor to warm it. The old cedar roof, fir pews and quaint pulpit, with its high sounding board, are very interesting specimens indeed of early church furniture.

The inscriptions recall the very interesting circumstances under which the church was built. After the capture by the Dutch (1655), the Swedes were very much scattered, and found it extremely difficult to secure pastors. They were of the Lutheran faith of the pure Augsburg confession and secured now and then a minister from the churches at New York, their last one from this source being the Rev. Jacobus Fabritius, called in 1677, who became blind and incapacitated in 1682. They made frequent but vain appeals to the home church to send them "two ministers, with Bibles, catechisms and other goodly books to protect them from the false teachers and strange sects," by whom they were surrounded. At last, in 1693, they appealed to Charles XI, of Sweden, an appeal very interesting to us from a statement it contains that there were then 188 Swedish families, comprising 942 persons, living on the Delaware. Charles was much interested by the letters, but the death of his queen, Ulrica Eleanora, soon after, and pressing affairs of state delayed the American matter for some time. In 1696 it was revived. Andrew Rudman, a candidate, was selected as missionary to America, and he in turn chose two other godly men, Eric Bjork and Josias Auvran, as companions and co-workers. The king gave for their outfit $1,300 "copper mint," and 500 copies of Luther's catechism, with Bibles, pastils and church books, each bearing the king's name in gilt letters. As the three were about to depart he granted them a personal interview, at which he gave them $100 "silver mynt" additional for their voyage, and informed them that he had ordered the Swedish ambassador in London to procure passports and see them safely on their way. "Go now," he concluded, "in the name of the Lord to the place to which I send you. God be with you and make you indeed successful!" Furnished with a safe conduct from England they came safely to Maryland, thence they traveled overland to Wilmington and Philadelphia, Rudman taking the parish at Wicacoa, near the latter place, and Bjork that of Crane Hook, near Wilmington. The people of Wimington thought that a church should be reared in their village; those at Crane Hook opposed any change; at last, as a compromise, it was agreed to place it on the banks of the Christina, so that the people from the outlying districts could come in boats in summer and sleighs in winter, and also for the protection afforded by the fort. John Stalcop, a church warden, gave the land. They began building on May 28, 1698. The edifice was consecrated as Trinity church, on Trinity Sunday, 1699. The occasion was made a day of great rejoicing. Governor Markham was invited, but was unable to be present. The feast was spread in the house of John Stalcop. All sorts of meat and drink, we are told, were contributed—wheat, malt, bread, flour, hops, wine, butter, sugar, raisins, eggs, veal, mutton, venison, chickens, turkeys, turnips, etc. The congregation ate the dinner together, "rejoicing and praising God." For years after the anniversary was observed. Communions and baptismal services were long celebrated with the chalice and plate sent over by the copper workers of Sweden to Pastor Bjork, and the Bible long used was that given by Queen Anne in 1712.—Wilmington (Del.) Cor. New York Post.

The Franking Privilege.

The postal authorities say that the amount of postal matter received under the frank of congressmen is so small as to be of no importance in connection with the work of the office. Occasionally after some important speech a number of Congressional Records will be forwarded to Boston or to other points in New England. Outside of the departments of the government and the members of congress the franking privilege is enjoyed by agricultural colleges and the widows of the ex-presidents of the United States. A circumstance not generally known is that all mail matter addressed to Sarah Polk, Lucretia R. Garfield and Julia D. Grant may be sent free of charge. No signature or mark is necessary to the free carriage of mail matter to either of the above named persons. The address is sufficient. These ladies not only have the privilege of sending their mail matter for nothing, but their correspondents enjoy the same privilege.—Boston Transcript.

Cheapness of Electricity.

The saving which will result in substituting electricity for horseflesh on the street railways of this country is hinted at by the fact that the operation of one street railway in England by electricity will result in saving $60,000 per annum over and above the present cost of operating it by horses.

A SHORT LIFE AND A HARD ONE.

How Car Horses Are Bought, Broken, Patched Up and Retired.

"I should not have thought it would have paid to work cripples," I remarked to the driver of a Third avenue car on which I rode down town a few evenings since. I referred to the near horse's hind legs, one of which was ornamented with a huge flannel bandage, while the other foot seemed in the dim light swollen to an abnormal size and to be parting from the leg at the hock.

"He's not lame," returned the driver affably. "That's a boot he's got on his near foot. He's had a quarter crack, and the thrush, too, but he came out of the hospital a week ago, and it don't seem to trouble him much. This road don't work no lame horses. Just as soon as they show any signs of weakness they are sent to the hospital, and the best veterinary surgeons in the country patches 'em up."

"I suppose the hospital is nearly always well filled," I suggested.

"Why, of course it is," said the driver. "This work's terrible hard on a horse, mainly because of these cursed stones. Our teams don't have very long trips and they're not pushed hard either, but the stones wear 'em out in a few years."

"How long does a horse last at this work?" I inquired.

"Three years, about," was the reply. "Some of 'em go on for five years with patching up, but that's the extreme length of time that they pull cars. When they have been about two years at the work their feet get so sore that they have to be turned out. The company has a stock farm in the country where they are taken, their hoofs are pared, and after running around awhile on the soft ground they get hard and fit to come back to the stones again for a time."

"Where do railroad horses come from?" I asked.

"Mostly from the west," said the driver as he put the brake on hard and came to a standstill while the original fat lady from a Bowery museum was hoisted on the car and paid her five cents like a mortal of ordinary avoirdupois. "But they buy horses all over," he resumed, as the car started again after a huge straining of the unlucky quadrupeds who felt the increased weight.

"No, there are not many really sound horses come into car stables. The buyer in the west takes a carload of horses, and after picking out the few good, sound, business horses, selects a lot of good horses with just some trifle wrong with 'em, which he calls 'streeters,' and sends them on to the city for the car companies. Then a lot of horses are picked up cheap because they have some small ailment or blemish which the veterinaries succeed in curing. They build 'em up, as you might say, as good as sound 'uns."

"How are the green young western horses broken into car work?" was my next query, and the driver half sighed as he replied, "Why, right here in the cars. Haven't you ever noticed a team working with a pole in addition to the traces? We always work a green horse with an old one, and the pole keeps him straight and prevents him kicking over very bad. But it's a tough job sometimes. Green horses are awful scared of the elevated road. They'll keep looking up and staring all around to find out where the noise comes from, and sometimes they'll just stand still and shiver with fright."

"How long does it take to get them used to it?"

"Oh, about two weeks. A car horse ought to be pretty handy at the end of that time. It'll take 'em six weeks or two months to know the bell, but after that they'll obey the bell quicker than a green driver. You'll see a new man fail to put the brake on quick enough sometimes when the bell sounds, but his horses will stop and the car will run right on to 'em. Horses are quick enough to learn, but I guess their days are nearly over. Electricity is bound to do away with them."—New York Herald.

He Will Think He Met an Angel.

A newsboy took the Sixth avenue elevated at Park place at noon yesterday, and sliding into one of the cross seats fell asleep. At Grand street two young women got on and took the seats opposite the lad. His feet were bare and his hat had fallen off. Presently the younger girl leaned over and placed her muff under the little fellow's dirty cheek. An old gentleman in the next seat smiled at the act and without saying anything held out a quarter with a nod towards the boy. The girl hesitated a moment and then reached for it. The next man just as silently offered a dime, a woman across the aisle held out some pennies, and before she knew it the girl with flaming cheeks had taken money from every passenger in that end of the car. She quietly slid the amount into the sleeping lad's pocket, removed her muff gently from under his head without rousing him and got off at Twenty-third street, including all the passengers in a pretty little inclination of the head that seemed full of thanks and a common secret.—New York World.

How It Feels to Be Rich.

I was talking with a friend of mine who for many years has struggled with pecuniary difficulties, never being quite free from anxiety on this score until lately, when he came into possession of a large fortune. I inquired of him what his impressions were in the novel condition, and he said: "The fact is I find my chief pleasure not in doing anything new, but in doing the old things with a new feeling. I can take a glass of wine now," he continued, "without counting the cost; and I find that I enjoy going to the theatre or taking my wife about in a carriage twice as much as I did before. The queer part of it is," he went on to say, "that I used to pride myself on being extravagant and reckless once in awhile, as a matter of principle, and I have only just discovered that, when I least suspected it, I was really conscious in the depths of my mind that I was paying out money."—Boston Post.

BEET SUGAR.

A Description of the Process of Its Making Throughout.

When the beets are dumped into the bins they pass from the farmer and are ready to start on their way to sugardom. Beneath each bin is a concrete ditch, and into this ditch the beets fall through adjustable traps. A stream of water is constantly flowing through the ditches in the direction of the factory, and it takes the beets to the south end of the main building and empties them into a cistern, in which is working a large screw that extends to the second floor, from which they pass into a large, drum shaped, iron cylinder, called the "wash barrel," where the beets are thoroughly cleaned. When cleaned they are thrown from the "wash barrel" into a hopper from which they pass into an endless elevator, which runs to the top floor, where the beets are discharged into a large hopper. Then they pass into a "cage," which will hold 1,000 pounds of beets, and when this weight is indicated the cage empties its load into the cutter. The cage and its indicator enable the factory people to closely estimate the amount of raw material used each day in the manufacture of sugar. It is also a check on every department. It will show any error that may arise in the receiving or shipping department.

The slicer or cutter is a round iron shaft with steel knives, capable of slicing 400 tons of beets every twenty-four hours, which runs down to the floor below. The lower end of the slicer opens into a wooden trough about two feet square, on the bottom of which is an endless belt. As the sliced beets fall from the cutter into this trough the belt takes them along as fast as they descend. Placed on this floor and ranged alongside the trough is a battery of twelve diffusion tanks, into which the sliced beets are next passed and diluted under a water pressure of eighty pounds. By this pressure the sugar and salts, amounting to 90 per cent., are released in liquid form, leaving only 10 per cent. of pulp to represent all the solid matter contained in the sugar beet of commerce. From the diffusion tanks the liquid sugar is then passed into the heater. Each tank is emptied every five minutes. In the heater the liquid is subjected to 75 degs. F. for some time, when it is again sent onward to the carbonization tank, where it is put through a clarifying process by lime and lime gas.

From the carbonization tank it is pumped into the presses, through which it is run three times under tremendous pressure, every particle of lime being retained in the presses, while the liquid sugar is conveyed to the quadruple evaporator, probably the heaviest pieces of machinery used in the whole process of sugar making. After going through the evaporation process it is delivered to the vacuum pans at the top of the building, where it is crystallized. Underneath the vacuum pans are placed very large square receivers, into which it is allowed to fall when crystallization has taken place; these receivers have revolving screws which form the bottom, and are kept constantly in motion to keep the sugar from caking. From the receivers it again descends to the centrifugal machines, where it is purged of the molasses and finally emptied into sacks on the lower floor and loaded on the railroad cars for shipment to the refinery.—San Francisco Chronicle.

Rewards of Authors.

Some recent items in the newspapers suggest a comparison of prices paid for various sorts of literary work a decade back and at the present time. If the paragraphers are to be trusted—and in this instance we think they are—Mrs. Frances Hodgson Burnett sold the right of serial publication of her new novel to The Ledger story paper of New York for the enormous sum of $15,000, with the privilege of selling it in book form in any fashion she chooses. Certainly this passion for fiction by the most successful writers, which the publishers are showing just now, is a glorious thing for those who have been fortunate enough to secure this desirable reputation; and the bidding for these books among enterprising proprietors of periodicals has made the market value absurdly high; it takes a long purse to compete for these stories in these days. But this active rivalry has been a great gain to lesser lights as well, we fancy—at all events among magazine writers.

Ten years ago $10 for a printed page of 1,000 words was considered high pay by the majority of workers in this field, and now unknown authors, whose MSS. are accepted, receive seldom less than $15, and frequently $20, per 1,000 words from any of the great magazines. Some of the best short stories ever printed were bought for $80 less than ten years back. Now it is safe to say $200 is the average among those whose names are known to magazine readers, while $150 is a low estimate for the average story of even an unknown author, and still the supply is scant.

Of course for tales by famous writers, whose names "help sell," $500 is not too small a sum. Short poems, not many years ago, were paid for by $5 and $10 checks, where now the writers expect $30 and $50, and get them, too. The reason is not far to seek—the demand is greater, and the magazines, because of their enormous sale, are able to pay liberally. But has the pay increased for other kinds of literary work? Ten per cent. on the retail price of books has been the average copyright for many years, and it is scarcely, if at all, higher than that today; the rate of compensation for newspaper work and for the weekly press (except when a great name is paid for) has certainly not increased; in many of the offices we know of it has been diminished, and surely the literary hack is now no better off than he ever was. To be successful, therefore, at least from a worldly point of view, an author must produce something striking to get the world's attention, then he is the publishers' master—and a hard, grasping master he usually is, to pay back old scores, perhaps.—Literary World.

PUTTING ON LADIES' SHOES.

A Dealer Discusses the Question of Male and Female Clerks.

The introduction of women as clerks in shoe stores was begun as an experiment a few years ago, and considerable interest in the success of the scheme has been manifested by the shoe trade. The experiment may now be regarded as a success within certain limits, but it appears to be equally sure that the female clerks will never entirely drive out the men, even from the departments for women's and children's shoes.

An experienced clerk in a well known uptown establishment said recently to a Tribune reporter that the tendency among large dealers now is to employ both men and women, and then let the customer choose for herself between the two. "It is purely a matter of taste," said the clerk, "and I should say even that it depended on the customer's mere whim. Some women profess to be shocked at the immodesty of having a man put on their shoes for them; but on the other hand many of the most refined ladies in the city always insist on having a man serve them, and there will always be this same demand."

"And what is the cause of this preference?" asked the reporter.

"Simply that a man can fit a shoe to the foot better than a woman can. The majority of women wear tight shoes, even those who have no claim to a place in the world of fashion, and it takes a strong hand and arm to get a tight shoe on a customer's foot easily. Most women are too weak in the wrist for this sort of work, and they will toil and struggle so over the task that many customers become completely disgusted, and learn to avoid a store where there are no male clerks to wait on them. A man by superior strength and dexterity will force a shoe two sizes too small on a woman's foot with comparative ease, and she will leave the store conscious of having secured a small shoe that is a perfect fit."

"And how about the question of modesty?"

"Well, a shoe store is a good place to study the vagaries of prudes. Unduly sensitive women do find it an ordeal to have men wait on them, and for such cases the female clerk is a business necessity. Most women, however, are not so sensitive, and as for the male clerks themselves, they would always rather wait on a man than on a woman, any time. A very young clerk sometimes feels that he has got pretty near heaven when he is directed to assist a handsome young woman in getting satisfactory foot gear, but the novelty soon wears off. Women are so much more particular than men, especially in the matter of shoes, that it is by no means a coveted privilege to wait on them. One annoyance to which ladies are not now subjected in the larger establishments is the impudent staring of dudes and other callow youth who used always to spend half an hour trying on shoes themselves, whenever they went to a shoe store, just to get a glimpse of a pretty ankle now and then. Now separate rooms are provided for the ladies, but the male clerks will never be entirely banished from these sacred precincts."—New York Tribune.

Home and the State.

Marriage has been defined as a contract between two parties and the state. Because of the children the state is said to have a special concern in the matter. This is no doubt true, but it means rather less than is generally supposed. The state has a concern in everything that affects a human being, down to the minutest detail of his daily life. It matters to the state every time a man smokes more cigars than are good for him, every time a woman pinches in her waist. It matters to the state very much when men grow absorbed in the business of money making and have no time or ability to assist in the development of a higher type of manhood. It matters to the state perhaps even more when women give themselves up wholly to the care of their households and the rearing of their children, rendering themselves unfit for their task and sending forth into the already overburdened world swarms of ill trained, stupid, prejudiced human beings, whose influence upon their fellows is evil and retrograde.

All these things concern the state nearly, but the state cannot send inspectors into our homes to count the cigars of the men and inquire into the system of education adopted by the women.—Cor. Westminster Review.

The Big Toed People.

The strangest of all the Indo-Chinese races, the ancient Gioa-Chi or Big Toed race, is called in our geographies "The Anamese." This extraordinary people are about the ugliest and worst built of all our semi-civilized Asiatic cousins. They are much shorter than the Malays, darker skinned, with lower foreheads, less developed skull, a flatter nose, larger mouth, thicker lips, blackened teeth, gums often destroyed by the use of betel nut, prominent cheek and jaw bones, so that the face is lozenge shaped, short neck, shoulders sloping abruptly, and a seesawing sort of gait when walking. But the most curious development of all is the big toe. It is large, broad and flat; moreover, the distance between that member of the foot and the other toes is so great that the Chinese so long ago as 2357 B. C. gave them the name of Gioa-Chi, or the Big Toed race.

This curious physical formation is such that it quite marks them from all other Asiatic peoples who walk barefooted; and, strange to say, that though more than forty centuries have passed since this peculiarity was first noticed by Chinese travelers, and in spite of frequent intermarriages with other races, the Anamese have transmitted, without the least perceptible modification, this formation of the foot to their descendants today; which facts, according to some ethnologists, serve to prove that the Anamese are not descended from the mingling of indigenous races, but rather that they have existed for an immense period of time as a distinct and peculiar race.—Wide-Awake.

A WOMAN ON CREMATION.

She Believes a Higher Civilization Will Abolish Grave Yards.

It has been the custom to attribute to women a sentimental conservatism regarding reforms in our methods of burial, which has retarded, hitherto, the movement in favor of cremation. Their antagonism, it is claimed, is not based upon any hygienic or economic views entertained by them, but to disinclination to interfere with usage. Custom is the fetich which the masses of women are charged with worshiping, and undoubtedly the accusation is true of the order of women who are swayed by emotion and whose judgment has not been trained by education and enlarged opportunities. Many women of the higher type have given the subject no thought; others secretly approve it, but keep silence through dread of shocking the prejudices of those about them. Some American women—from dispassionate contemplation of the subject—are earnest advocates of cremation as a necessity of the age, made manifest by injury to the public health through the overcrowding of grave yards adjacent to large cities,

Justice to the living will ultimately be the factor which will lead the majority to accept the conclusions of the minority regarding cremation. But right ideas will not prevail universally until the costly show grounds—now held in veneration—are proven to be pest places. Then sanitary influences will overpower the sentimental ignorance which continues the colonizing of corpses in graveyards which are already within the limits of our cities. A higher civilization than ours will be ashamed of the vulgar and ostentatious display manifested in the name of the helpless dead. Cremation, by increasing our respect for our fellow beings, will mitigate this evil, and it will correct another of which Americans seem to enjoy a monopoly—that of traveling corpses over the country to the discomfort and humiliation of the living. Surely it is debasing to our ideas of this immortality of the spirit to pay such honors as we do to lifeless flesh, even though it be clothed for a brief space in the likeness of a loved one. Could we be induced to reflect how brief a space it is in which the body remains as we put it away, most assuredly we should prefer its speedy dissolution by incineration. When a human body is no longer animated by the life giving principle that individualized it, is it not merciful to swiftly resolve it to dust by the purifying element of fire? So claim many who consider our burial customs heathenish and utterly inconsistent with our ethical, spiritual and sanitary views. So think the women who herein assume the responsibility of uniting together in the interests of enlightened public sentiment in a symposium on cremation.—Laura C. Holloway in The Epoch.

The Dreams of a Hasheesh Smoker.

Science describes the experiences of a gentleman who placed himself under the influence of hasheesh. He smoked it until he felt a profound sense of well being, and then put the pipe aside. After a few minutes he seemed to become two persons; he was conscious of his real self reclining on a lounge and of why he was there; his double was in a vast building of gold and marble, splendidly brilliant, and beautiful beyond all description. He felt an extreme gratification, and believed himself in heaven. This double personality suddenly vanished, but reappeared in a few minutes. His real self was undergoing rhythmical spasms throughout his body; the double was a marvelous instrument, producing sounds of exquisite sweetness and perfect rhythm. Then sleep ensued, and all ended. Upon another occasion sleep and waking came and went so rapidly that they seemed to be confused. His double seemed to be the sea, bright and tossing as the wind blew, then a continent. Again he smoked a double dose and sat at his table, pencil in hand, to record the effects. He lost all conception of time. He rose to open a door and it seemed to take a million years. He went to pacify an angry dog, and endless ages seemed to have passed when he returned. Conceptions of space retained their normal character. He felt an unusual fullness of mental impressions—enough to fill volumes. He understood clairvoyance, hypnotism and all else. He was not one man or two, but several men living at the same time in different places, with different occupations. He could not write one word without hurrying to the next, his thoughts flowing with enormous rapidity. The few words he did write meant nothing.

Grease for the Boots.

Dr. Alexander Zoroastroff, of Belostok, emphatically recommends to all military men, sportsmen, and others, a grease for boots which is said to entirely prevent sore feet, and so protects pedestrians from the whole train of familiar affections caused by that minor accident. The ointment is made of four parts of lard, four parts of olive oil and one part of caoutchouc (raw rubber), which are melted together on a slow fire. Having moistened the sole of the boot with water, the inventor warms the boot in a stove or before a fire, and then smears it over with the compound. The boot is said to become soft, pliable, shining, waterproof and even more durable.—Frank Leslie's.

Small Talk.

Small talk is the small change of life; there is no getting on without it. There are times when a little nonsense is very palatable, and gravity and sedateness ought to be kicked down stairs. A philosopher cuts a poor figure in a ball room unless he leaves his wisdom at home. We have met with men who were too lofty for small talk. They were above such trifling; in other words, they were above making themselves agreeable, above pleasing and above being pleased. The world is made up of trifles, and he who can trifle elegantly and gracefully is a valuable acquisition to mankind. He is a Corinthian column in the fabric of society.—New York Ledger.

Instructions as Interpreted.

He was a night reporter on a daily paper and it came in his way to interview two worthy ladies connected with one of our benevolent institutions on a subject of some importance. The city editor told him to use tact and make himself agreeable. As the matter was not wanted for the next edition he could take his time and not hurry the ladies in their recital.

These were his instructions: at 8 p. m. he appeared at the institution, the inmates of which had just been called to prayers. The rest of the story is best told in the words of the elder lady herself.

"He seemed a very nice, agreeable young man, and we thought he had known some of our patients, or had some idea of adopting an infant from the children's ward. My assistant, Miss ——, she is a young lady, was a little nervous, as we have so few calls from gentlemen. But we asked him out to see our house service, and he sung and read a chapter, and was very nice. Then we went back to the parlor and Miss —— wanted to excuse herself, but I would not let her leave, and the young man I thought would soon go.

"I wish you could have heard him talk! He told us all about himself and what a checkered career he had gone through, and Miss —— became quite sympathetic, but we were both dreadfully worried. We did not know what he wanted, and he gave us no chance to ask. I was so sleepy for a while that the smile froze on my face, and I saw double. Then he made me tell the history of the institution, and that is my weak point. Every time my assistant, Miss ——, would attempt to go I would frown at her. We both knew that everything in the house was going wrong. I could see the clock, but the young man sat with his back to it. At last it struck 2! Then he asked what time it was. I told him it was 2 o'clock in the morning, and then he let the cat out of the bag at last. He told me who he was.

"'We fellows just consider this the shank of the evening,' he said. 'You see, I'm an all night man, but I am afraid I have been keeping you ladies up.'

"We both said: 'Oh, no, no, no,' for we were almost stupefied, and much too sleepy to tell the truth. But we both wondered what his business was with us, and, do you believe it, he told us in less than five minutes! He simply wanted to know if a statement in the evening paper of the night before was true!"—Detroit Free Press.

Preachmen as High Livers.

It is a fact worth noting that most of the families who were raised to high positions and profusely gilded by the First Napoleon are extinct, and that those which still exist are represented chiefly by women. The first empire and its wars did not play havoc with the dukes and the princes who sprang up around its head. The harm was done by the second empire, whose ideal was faire bombance. The higher class Bonapartists ate, drank and were nearly all guzzlers, and managed to soak any amount of fine wines at their lunches and dinners. The fashion in their time came in of having as many wineglasses at each plate as there are flues in a great stack of chimneys.

When the appetite palled, the sorbet russe was brought in to act on the unfortunate stomach as a tonic, and enable it to go through as much more as it had gone through already. One of the reasons why Marshal Bazaine could not get quickly out of Metz, to bar the way against the Prussians, was that the emperor started before him, and so the road was blocked with service de la bouche and the wagons carrying the belongings of his imperial majesty, which were truly impediments. When the Israelites were under a theocracy, and the chief priest's sons ate as do city of London aldermen, the Philistines routed them. Likewise Marshal de Soubise was immortalized by his sauce for mutton chops and disgraced by his defeat.—Cor. London Truth.

The German Hotel Porter.

In German hotels you come in contact only with the porter and head waiter. The porter is usually selected for his intelligence, for his ability as a linguist and for his size—height rather. You make all inquiries of him concerning the hotel, about the arrival and departure of trains, the sights of the town, etc., and you invariably get civil and intelligent replies to all your questions. The so called porter (portier), however, in no sense corresponds to the American idea of a porter, nor is he called upon to do the slightest physical labor. He receives guests, sees them depart and makes himself very useful in many ways; but as for lifting a trunk or carrying a satchel, this is entirely beneath his position and his dignity. The actual porter performs this labor, and both of these officials expect and receive a fee on the guest's departure. In paying your bill at a German hotel you see neither proprietor, manager nor porter; neither will receive it; you are obliged to pay the waiter, who thus makes sure of his fee.—Home Journal.

A New Axle Box.

Some Prussian railways are experimenting with axle boxes fitted with bearings of vegetable parchment in place of brass. The parchment is strongly compressed before being used, and it is thoroughly dried to prevent subsequent shrinkage. An emulsion of water and oil, any of the mineral oils, is used as lubricant. The parchment soon becomes impregnated with oil, and is able to go a long time without a renewal of lubrication. Superiority to metal is claimed for it.—Chicago Herald.

The hippopotamus seems to be as surely on the road to extermination by hunters as the American buffalo is. Von Francois, the Congo explorer, says the huge but innocent pachyderms are already scarce in the waters that once teemed with them, and laments that they have been shot down by hundreds in mere wanton sport, their valuable hides being rarely removed.—Science.

Hebron Today.

We found ourselves encroaching upon the land of the Azazimehs, the descendants of Ishmael, and were overwhelmed by a storm of abuse from a delegation of the tribe who, having sighted us afar off, stood awaiting us at the ford of the river which led up Beersheba way. No day in Petra held more anxiety than this one did; for parting with the mutinous wretches into whose hands we had voluntarily placed ourselves at Akabah, compromising with those who held us prisoners, and arranging with the newcomers, required an amount of intolerable yelling and bluster which was more interesting than pleasant. Swords, pistols, clubs, spears, fists and guns were all used; but nobody was hurt—very much. Even the moon looked troubled by the time we made our departure. If such people infested this region when the spies came this way, it is not so wonderful that they returned to Moses and said, "We were in our own sight as grasshoppers, and so we were in their sight." Certainly my long felt sympathy for Hagar and Ishmael was much shaken by my dealings with their descendants. Nothing could be more lovely, however, than the region reached a day's journey farther north, when in the neighborhood of "the brook Eshcol." The land rolls through "green pastures" and "beside the still waters." The wide valleys were clothed with verdure, spotted with daisies, buttercups, dandelions, poppies white and red, and many other flowers. Large flocks were there, attended by their shepherds; the fellahin were at work, and the women, tall and erect, were everywhere carrying water in jars upon their heads. The fields were protected from the torrents by stone walls such as we saw in the wilderness, and olive groves and vineyards abounded. It was a grateful scene, made more so by the resemblance of the gray sided hills to those of good old Massachusetts. Each vineyard of Eshcol was protected by a high stone wall; in every one was a low stone structure which served as the house of the attendant. The roof was the watch tower, whereupon the watcher spent the day, to keep the birds and the Bedouins away from the fruit. Nestled away down in the valley below lies the Hebron, "in the plains of Mamre." There, reaching across, is the old camping ground of the patriarchs, and in the distance, towering above everything else except the surrounding hills, are the minarets of the mosque which covers the cave of Machpelah. Hebron is the oldest town in the world which has maintained a continuous existence. The hills and the valleys alike are clothed with olive groves, orange trees and vineyards; figs, mulberries, almonds, pomegranates and vegetables like our own melons and cucumbers also abound. Streams of water run hither and thither and murmur music which gladdens the heart of the weary traveler.—Cor. Century.

The Title Nuisance in Germany.

And then the way a man's titles are piled on when addressing him is very amusing. I remember how this bothered my memory in Altenberg years ago, when my family was there. At a semi-literary dinner was a doctor who was assistant professor of rhetoric. He was always addressed as Herr Dr. Assistant Professor of Rhetoric Schneider, all the titles being compounded into one word; or Herr Colonel Master of the Duke's Stables von Reuter. Woe to the guest who failed to compound into one word all of these positions when addressing Mr. Reuter or who left out the "von!" I made many mistakes and finally settled the matter by telling them frankly that I was an unlettered Yankee. They let me get through with one title in addressing any one, but I think they very much pitied my lack of good form. I do not wonder that kings, princes and nobles think themselves made of finer material than that of common men. The people by their adulations teach them so to think. Socialists in Germany and France rail at the privileged classes; Nihilists in Russia slay them, but the great bulk of the people show that they worship them, and when one master is gotten rid of they each pick up a lamp and grope about in the dark, Diogenes like, trying to find, not an honest man, but another master under whose feet they may lay their necks.—Cor. Chicago Mail.

A Clock Peddler's Trick.

A good story was told your correspondent the other day about a well known old gentleman who peddled clocks and jewelry in the days before railroad contracts made him worth over a quarter of a million. "I distinctly recollect on one occasion," said he, "I was selling clocks near Mechanicsburg, in the beautiful Cumberland Valley, and ran across a house where the man purchased three. After dinner, to which I was invited, my curiosity being excited by the fact of the gentleman's taking three clocks, I asked the reason. He told me that he was one of three brothers who had agreed among themselves that the first one who struck a clock peddler should buy a clock for each. I inquired about the brothers, where they resided and the best way to reach them, and after dinner I started, and before evening had seen the two brothers and sold them each three clocks, making nine in all." When he finished the story the old gentleman gave a chuckle, as if he had accomplished a thing for which he deserved commendation.—Jewelers' Review.

To Locate a Leak.

A novel method of locating a leak in a water main has been employed at Rochester, N. Y., with entire success. The break in the main was known to be between the banks of the river. A solution of bipermanganate of potash was introduced at a hydrant on the side of the river nearest the reservoir, and observers were stationed on the river along the line of the main. A deep reddish purple discoloration of river water at one point soon made the exact location of the leak apparent.

Postal Savings Bank System.

One of the features of the government of Great Britain is the postal savings bank system. It is very popular and is largely patronized by the public. Its usefulness is beyond all question. United States Consul Walling, at Liverpool, has been investigating this subject and has given some very interesting facts about its workings in a report to the secretary of state. The beginning of the government postal savings banks was in 1861 under a bill prepared and presented by Mr. Gladstone. It was entitled "an act affording additional facilities for depositing small savings at interest with the security of the government for the due repayment thereof." On the day of the opening of the first banks under this act 435 deposits were received. One year afterward the number had increased so greatly that there were 2,535 offices open for the accommodation of the public. In 1886 the depositors had increased in number to 3,731,421, and the amount of money on deposit was £50,874,338. This in American money would be $250,000,000. Deposits of one shilling or any number of shillings are received up to $150 or £30. The interest paid is 2½ per cent. a year on every full pound. Should the sum on deposit reach £200 the interest thereon will cease until the amount has been reduced. The government has made provision for the investment of larger sums in its securities. The banks will receive deposits from parents or other relatives on behalf of minor children. Married women can also make deposits which are beyond the control of the husbands.

Another feature of the British system is that the government guarantees the repayment of all moneys on deposit with interest, and also any life insurances or annuities granted under the act creating these banks. The results of the measure of Mr. Gladstone have been such as to recommend it to the good will of the people of Great Britain. That they do appreciate it is shown by their liberal patronage. The cost of maintaining it is very little, being about five-eighths of 1 per cent. The guarantee of the government makes the system absolutely safe. It is in every respect a well regulated financial institution. Great Britain is not the only nation which has these postal savings banks. They are a feature of the American and Australian British colonies. They have been engrafted upon the political system of France, Germany, Austria, Italy, Belgium, Holland and Japan.—Detroit Free Press.

The Causes of Poor Hair.

The first and great reason is that women do not keep their heads clean. Oftener they are too busy with housekeeping and children to give the hair the weekly shampooing and nightly brushing it needs. Still oftener they are too negligent or do not know that on strict cleanliness of the scalp depends their chances of having good hair at 35. Housework should be done with a muslin cap or towel folded to cover the hair to the roots. House dust, which is mainly dead animal matter thrown off by clothing and beds, is deadly to lungs and hair. Housemaid's consumption is generally due to breathing the dust and flue of ill-kept chambers, and the layer which collects at the roots of the hair kills it and causes the most of the falling out of which matrons complain before 40.

When women comprehend the baleful influence of dust on the health, hair and complexion, they will banish carpets, upholstering and unwashing draperies, at once and forever, as the great receptacles and absorbents of dust. When curtains and carpets or large mats are used the air constantly receives floating dust at each movement; not much, it is true, in carefully kept houses, but quite enough as it gathers on the scalp, week after week, to form with its natural oil and sweat a thin malignant crust in which the root of the hair slowly decays and drops. As the most of women wash their heads not oftener than once in six weeks, the effect is best left indefinite. Scalp irritations are not unknown, causing months and years of trouble. But oftener the skin of the head, clogged and loaded with dead scales of matter, loses its functions and the hair drops out.—Shirley Dare.

Rats on Board Ship.

"We can always tell," said a West India captain, speaking of the plague of rats in port now, "when we have a few or many of the pests on board. The rats do not, as one would suppose, remain on the ship, but they get off at various ports, and, after remaining awhile, ship on some other vessel for another voyage. The water rats, or wharf rats, are great travelers, and make frequent voyages around the world. There are here now rats from almost every part of the globe. Why, I saw four colossal Jamaica rats, with their white bellies, skipping about in the moonlight the other night, and yesterday I killed two Indian male rats on my vessel.

"Rats are great climbers when they find it necessary to do so. Upon one of my voyages not long ago we had a long spell of warm weather, and there was no water in the hold which the small army of rats on board could get at. One night we put some water up at the cross trees and waited for the result. Well, the rats just swarmed up the rattlings and went for that water. We killed as many of them as we could as they came down, and some of them jumped overboard and were drowned. But we could not kill them all, and a few made the entire voyage with us."—Philadelphia Record.

Fashions in Handwriting.

There are fashions in everything nowadays. The latest is in handwriting. At least, I see that an instructor in that art advertises at a stylish stationer's that he will impart to our aristocracy, and I presume any one else who can pay for instruction, the latest styles of fashionable caligraphy. It used to be charged against the old fashioned writing master that his method of instruction deprived the pupil of all individuality in the use of the pen. The writing master taught writing after the fashion of a copperplate. The newer style insists on an equal suppression of individuality without the compensation of elegance. The thing in handwriting now is apparently to make it as illegible as possible. The extent to which the people succeed is certainly a credit to the master.—John Preston Beecher in New York News.

Watermelon Molasses.

A negro farmer in Dougherty county, Ga., has succeeded in making excellent syrup from watermelons, and thus a new use is devised for the surplus crop.—Chicago Herald.

There is a respect due to mankind which should incline even the wisest of men to follow innocent customs.—Dr. I. Watts.

IN THE VALLEY.

Above the grain the air is bright and clear;
I see the crest of Mount Diablo rise
Against the blue-gray depths of cloudless skies;
And the Sierras, snowy topped, appear
Purple with shrouding mists; I know how near
Above their heights the quiet heaven lies,
Not cold and dark, but warm as loving eyes,
When fondly gazing on the one most dear.

The day is garish in the valley, yet
I know how soft upon the rocky steeps
And pine clad hills the mellow sunlight sleeps;
And when at eve the day and night are met,
How weird the subtle darkness on them creeps.
How can the heart that loves such scenes forget?
—Virna Woods in Overland Monthly.

"HIS LITTLE GAL."

"Well, sir, seeing as ye mention it, I don't mind if I does try er drop o' sumot 'ot. It's very comfurting to the innerds, partickler of a cold night."

This was in answer to my proposal to old Jim Benton, stage doorkeeper of Astley's Royal amphitheatre, London. The manager was a particular friend of mine, so that I had the entree to all parts of the theatre, and came and went as I wished. Jim had held his position some thirty odd years, and could, when he felt inclined (a drop o' sumot 'ot helped greatly thereto), relate many a good story of dead-and-gone actors and their next of kin, heroes of the sawdust. I am an occasional contributor to the newspapers, and I would like here to say that I have been indebted to Jim Benton for many an odd bit of pathos and humor. Poor old fellow! It is already ten years and more since I followed him to his last resting place, and the stage door of Astley's Royal amphitheatre knows me no more. This night Jim was unusually talkative.

"Lor' bless yer, sir," said he, as he raised his glass of gin and water to his lips, "I pities them teetotaleers, I does. I cum ernost er jining on 'em onct, but Providence wuz agin it. No, sir, yer can't pass. I don't know no sich name." This last was addressed to a gentleman in lavender kids who presented himself and his card at the door, asking to see Miss Morrelli, the principal danseuse.

"Ah, perhaps you are acquainted with my pliag?" here added the exquisite.

"Can't say as I ham, sir. It's not to be hexpected I could remember all the gals' names. Yer see, we takes on er lot of hextras cone pantomime season. I can't pass yer, sir; horders is horders."

As the swell withdrew old Jim continued with:

"Lor, sir, if I was to pass hall as was wantin' to git in there wouldn't be no room behind the scenes fur the hactors; but it ain't nothin' now to what it used to be when Mr. Ketchum had the management. Yer orter ha' seen the stage door then. That was when the madame was er playin' of Mazeppa, and a mighty fine figure of er woman she wuz, too. Perhaps ye've seen her, sir. Ida Frances Fay was her name."

On my replying that I had never had that pleasure he continued with:

"Well, sir, there'll never be another Ida Fay. There's lots o' gals wot's tried it on, but it don't work. Yer see, there wuz er somethin' er sorter o' takin' about her wot fotched the swells. Yer couldn't git standin' room when she wuz er playin'. Fast, was she, sir? Well, maybe she warn't hexactly wot yer'd call a hark hangel, but she was oncommon good to my little gal, and that's enuff fer Jim Benton."

"Why, have you a daughter, Jim?" I exclaimed, rather surprised of his never having mentioned it before.

"Had, sir, had"— Here the old man paused a moment and stooped down to pick up a wisp of straw from the floor, and I noticed his hand trembled as he did so.

"Yes, sir," continued he, "yer wouldn't think ter look at me that I could have sich a dater. Sich a pretty little thing, with hair fur all the world like gold, and eyes that made me think o' the wiolets, and a sparkle in 'em when she laughed that all the spangles iver yer see couldn't beat. Yer see, sir, I was pretty well on in years when Mamie was born. She was christened Mary, but we allers called her Mamie. My little gal warn't mor'n a year old when the missus wuz took ill with a fever and died, and there I wuz left with a baby on my 'ands; but lor' bless yer, sir, I took as natrel to 't as if I'd been a nuss hall my life. Brought her through the measles and whooping cough as right as a trivet. Many's the hour she's sot on that ere stool there er watchin' me. Sometimes she'd be as still as a mouse, and then agin she'd chatter like a little magpie. She had kurus fancies, had Mamie, when she warn't no higher than that ere table.

"'Daddy,' ses she, one day, 'does hangels allers 'ave wings?'"

"'Yes, deary,' ses I. 'I allers heer tell they had.'

"'Then,' ses she, 'when I die, daddy—of course it won't be for a big, long while; little gals don't die werry much, does they?—I'll tell God I wanter see my daddy, and I'll fly right down here and peek in the winder and s'prise yer.'

"Yes, sir, that's the way she'd talk sometimes, and somehow it made me feel as if some one wuz er pressing a weight on my chist and I couldn't breathe. Do you know, sir, perhaps it's foolish, but I b'lieve she do come to that winder and look in at her old daddy sometimes—onyways, it's a bit comfurting to think so.

"How came I to lose her? That's wot I'm comin' to, sir. Yer see Mamie was born, as I may say, in the perfeshun, in this werry theayter. Why, what do you think, sir, afore she could toddle I bought her a Noah's hark, and wot hanimal would yer b'lieve she picked out fust? A 'orse, sir. Ah, sir—it was born in her. I had allers a leanin' arter hacting, but yer couldn't keep Mamie away from the 'osses. Was I afeard of her getting hurt? Well, no, sir, I earn't say as I wuz. Yer see the grooms and hall the boys wuz oncommon fond of Mamie and took a heap of care o' her.

"Well, sir, when my little gal was about 6 years old, Dan Maxwell wanted to break her in to ride with him. At first I wouldn't hear to't, but Mamie wuz so wistful for't, and Dan wuz sich a great, strong feller, and I knowed he'd be that keerful of her as if she wuz made of gold, so I let Mamie have her way. There warn't to be no whip used. I wouldn't ha' stood that, but lor', sir, there warn't no need o't. The child took to riding like a duck to water. When I see her name on the posters in big letters, I couldn't help feeling a bit proud, and ivery night when she was on, I used to get some one to mind the door, while I slipped round in front. Sich er picter as she looked in her bit o' white dress all covered with spangles! And how they applauded her, sir! She got most a basket of oranges ivery night, too."

Here the old man paused a moment and drew his hand somewhat shamefacedly across his eyes.

"Well, one night I couldn't git round in front until jist as they wuz doing the finish; for that Mamie used to stand on Dan's shoulder, with one little foot out, and with her bits o' 'ands throw kisses to the audience. You've seen how it's done, sir. When she got round to the side of the ring I was on, she kinder of forgot herself and nodded and kissed her 'ands to me, calling out, 'There's one fur you, too, daddy.' The next moment—I never knowed how it 'appened—but the 'osses wuz down and Dan and my little gal wuz under them. When I picked her up I thought she wuz dead, but she opened her eyes and said, 'Is that you, daddy? I b'lieve I ain't hurt. I don't feel nothin'.'

"The madame, as I spoke of, sent her own kerredge fur a doctor, and when he came he looked so grave I knowed it wuz somethin' bad. So I up and asked him to tell me the truth. And he did in the feelingest way he could. My little gal had broken her back, and if she lived would be a cripple. I thought as how I couldn't bear it at fust; she had been so 'andsome and spry, with sich a pretty figure. Dan got off with a broken arm and a few bruises. I never see er feller so cut up as he wuz about Mamie. He sot there on that cheer and cried like a babby, and when my little gal put out her arms to him one day and sez, 'Dan, don't you want to take me to see the 'orses?'—I think it wuz her way of showing him she didn't blame him—he made a pretense of going arter some candy fust; but it wuz to 'ide his feelings, sir. I think as how he spent mor'n half his salary er buying toys and things for my little gal. And there was the madame, too, er fotching hall sorts of nice things to eat and er ter talkin' to Mamie by the hour. Mamie used to like to play with madame's ring and sich. She wuz main fond of jewelry, wuz my little gal. And between the madame and Dan there wasn't much in that line she didn't 'ave, even to a watch. I got 'em hall stowed away in a box, hexcept her ring she give to Dan. He wears it on his watch chain now.

"Well, sir, arter a long while Mamie was hable to git round on crutches, but she was still pale and weakly like. The madame, when she wuz here, took her out a'most ivery day er ridin' away into the country, er tryin' to put a bit o' color into her cheeks, but it never stayed there long. She used ter lay on that 'ere old sofly there and hold wot I called her drawin' room. Yer see, hall the boys used to drop in and chat with her, and the wimmin folk, too, fur that matter. Everybody loved little Mamie.

"About a year arter the haccident, Mamie ses to me one night: 'Daddy, Mrs. Green' (that was the wardrobe woman, sir) 'ses there's a little girl a-going to ride to-night, just like I used. I should so like to see her.' 'Would yer, deary?' ses I, 'then Daddy 'ull take yer in front.' But I was angry with the woman fur 'aving told the child.

"Carryin' Mamie in my arms I went round to the ring entrance. With her eyes er shinin' like stars, she watched the act through, then as she put her 'ead down on my shoulder, sorter weary like, she ses: 'Daddy, I vant that little girl to have my whip.'

"I sot down here with her on my lap, er strokin' o' her pretty hair. Hall to onct she put up her little arms and pulled my face down to hers. 'Daddy,' ses she, 'kiss me;' then she cuddled close up to me and seemed to sleep. I sot fur quite a while as still as I could fur fear o' wakin' her, but some one comin' to the door I had to lay her down. She was dead, sir! My little Mamie, dead in my arms!

"Everybody was that kind and feeling, but they couldn't take the pain outer my 'art. There ain't nothing wot can do that. She's buried at Finchley, sir, with as beautiful a stone as yer'd wish ter see. A'most ivery Sunday I goes out there. It's not offen I speaks about her, sir; but my little girl is allers here," and the old man placed his trembling hand upon his heart. There was a choking sensation in my throat, so without a word I shook hands and left him. Turning at the outer door, I saw old Jim unlock a cupboard and take down a little pair of crutches tied together with a faded blue ribbon. He touched them gently with his horny hand, then raised them reverently to his lips.—Florence Revere Pendar in Boston Budget.

Treatment of Incorrigible Criminals.

The plan of permanently confining incorrigible criminals has been adopted by the state of Ohio. Under a recent law, a criminal, after having been twice convicted and imprisoned, is regarded as an habitual offender, and is confined for life, except that after a stipulated term the board of managers of the prison have the discretion of allowing him to go outside the enclosure on parole, though he still remains in legal custody and is always liable to be taken back summarily. In other words, the incorrigible or professional criminal is treated as if he were a lunatic, and only permitted to go abroad after long and apparently successful treatment, with the certainty of an immediate return to confinement if he shows his unfitness for freedom.

That is the method approved and recommended by the penologists in session at Boston, and common sense is on its side. There ought not to be such a character as a professional criminal outside of prison walls, and yet New York is full of them. Detectives can take you around to their resorts and point them out to you, perhaps nodding to them as old acquaintances as they pass by. Meanwhile society is put to a vast expense to guard itself against the depredations of these outlaws. Yet it treats them as if they were engaged in a warfare so far legitimate that they are only to be punished when their tactics are inferior to those of the police, the army which it maintains to fight with them.

That seems to be a very stupid way of dealing with crime. After capturing criminals at great expense of money and ingenuity, we hold them for a brief period, and then turn them loose to go on in their spoliation and violence and to propagate their own kind, until they are again caught, when the process is repeated at intervals throughout their lives. The only true way is to capture them once for all and hold them fast thereafter as incorrigible enemies of society. And in their captivity they may be made to do honest work with the hands which in their freedom they put to criminal use only. A prison is the proper place for constant criminals.—New York Sun.

Development of the Fishing Vessel.

The vessels of our fishermen in early times were diminutive craft of only from five to twelve tons burden, and were pointed at both ends. They were called pinks, or pinkies. Then the pointed prow gave place to a bowsprit and jib, and the vessel, still retaining this pointed stern, became a jigger. Today the fishing vessels sailing out of Gloucester are first class two masted schooners ranging from 75 to 125 tons burden. They are the swiftest, most buoyant and seaworthy, and still the most beautiful and graceful vessels afloat. The average crew for a first class fishing vessel comprises a skipper, or captain, and from fourteen to sixteen men, and it is almost invariably the case that not a man is shipped who is not as perfectly familiar as the skipper himself with every manner of coast and banks fishing, as well as with every conceivable duty as fisherman or seaman.

The stores, or supplies, vary according to the kind of fish sought and the probable length of the cruise; but they are always far superior to those provided for seamen in merchant service. There is no caste, no distinction in food, treatment or fellowship; and the skipper would be ridiculed off the coast whose cabin table was a stranger to fresh butter, pies, eggs, fowl, good biscuit and coffee and the best quality of cured meats; and, as on many of the vessels, large quantities of ice are kept for the purpose of preserving fresh fish for the markets, vegetables and fresh meats are not uncommon even on extended cruises. Aside from the serious toil, dangers and frequent necessary hardships endured, no seafaring men command or deserve better food or treatment.—Edgar L. Wakeman in New York Mail and Express.

There are 50,000,000 cattle of all kinds in this country, and but 200,000 of the pure breed.

Flies don't bother the busy man.—Philadelphia Call.

SATURDAY, MARCH 2 1889

Bar silver is quoted at 93½.

Apricot and nectarine trees are in bloom.

James C. Flood, the millionaire, died last week.

W. T. Grant came up from Olancha last Monday.

See the advertisement of James Jenkin for young stock.

S. G. Gregg, of Big Pine, was in town few days this week.

Hon. Henry T. Hazard has been elected Mayor of Los Angeles.

Mrs. L. Cook, of Bishop, is visiting friends at Independence.

W. A. Harris, the stenographer, arrived from Dayton on Wednesday.

John Blair, of Bishop Creek, has been in town during the week.

Miss Laura McMurry, of Big Pine, was in town during the week.

James Jones came down from Big Pine on Wednesday and returned next day.

It is said that some of the Independence sports met with a Waterloo at Big Pine.

Miss Georgia Johnston, of Bishop, was a guest at the Norman House on Tuesday.

Charles A. Skinner proved up on his land location at Georges Creek on Monday last.

Mr. and Mrs. John Barnes, of Keeler, were among the visitors at Lone Pine on the 22d.

Bell Boy has been sold in Kentucky for $51,000. Mr. Rose has also sold Stamboul for $50,000.

The Independence people who went to Big Pine on the 22d say they had a glorious good time.

Quite a number of visitors have been in town on various suits, and also from San Francisco looking over the country.

Mr. H. H. Spear, Superintendent of the new canal near Bishop, came down from there last Tuesday, returning next day.

The guests of the Ormsby House, at Carson, are under strict quarantine because of small-pox. Dr. S. Lee is physician in charge.

On Washington's Birthday all the Foreign Consulates in San Francisco floated their flags in honor of the event except the Germans.

The Bodie *Miner* is again to the front. It has thawed out in the spring sunshine, and may the warmth of its reception never let it freeze.

D. McCord and Wm. Borgwardt were in town Tuesday night with about 60 head of horses from Nevada which they are driving to Bakersfield.

Co. Surveyor M. Knight has been in the vicinity for several days past. Considerable surveying is being done by Mr. McKnight and Mr. Seely.

J. E. Dunlap is down from Bishop with a complete outfit for harness repairing. He is located at Davis' shoe store on Market street. Repairing done in a workmanlike manner.

Messrs. R. S. Carrasco, Ruperto Carrasco and B. Lisky were in town in the early part of the week. The young men have joined the new lodge of Native Sons organized here.

Mr. and Mrs. Barnes, of Keeler, will give a grand ball on the 18th in honor of St. Patrick, the 17th being Sunday. This will be the fourth annual ball given by Mr. Barnes. See his advertisement.

Captain J. M. Keeler and Mr. M. Johnson, of San Francisco, are visiting at Independence and vicinity. They both have land located here and are much interested in the future prosperity of the country.

Rev. E. McEvers will preach to-morrow (Sunday) at the school house at Lone Pine at 10:30 o'clock a. m., Sunday School at 11:30 a. m. At the M. E. Church, Independence, at 7 o'clock p. m. Sunday School at 11 a. m.

A land contest case was tried in the U. S. land office last Tuesday. The contestants were S. P. McKnight vs. L. P. Orr, the land in question being a timber culture claim. A number of witnesses were examined on both sides. No decision has yet been rendered.

Delinquent tax sales have been in progress during the week. But few purchases have been made, most of the list being composed of unpatented land and personal property, upon which no recovery can be made.

The following gentlemen were in town from Bishop during the week: Geo. Watterson, Mark Watterson, George Mead, John McGowen, A. Porteous, J. H. Stoutenborough, J. E. Dunlap, C. B. Rawson, Dr. George, H. G. Plumley, J. Elkeles, G. L. Drake, James Hutchings, W. B. Hutchings, W. Rowan, S. A. Middleton, Nick Rokeay.

Death of J. C. Flood.

James C. Flood, one of the original members of the bonanza firm died in Heidleburg, Germany, Sunday morning.

He was born in New York in 1826 and came to the Coast in 1849. He worked in the mines for several years and then opened a saloon in San Francisco in company with W. S. O'Brien. While in this business the saloon firm became interested with Mackey & Fair in mining operations on the Comstock, and in an incredibly short time the quartette ranked among the wealthiest men in the world.

It cannot be said that wealth turned his head, for he entered coolly and systematically into the management of gigantic business concerns, notably in the Bank of Nevada, and gave them a name of substance and standing the world over. We have not the material at hand to properly write even a brief review of the financial transactions of James C. Flood.

He leaves a wife, son and daughter.

His wealth is variously estimated at from $2,000,000 to $10,000,000, mostly in Government bonds and San Francisco property.

He has been unable to attend to the affairs of the firm of which he was so long prominently identified for over two years owing to sickness.

The remains will be embalmed at Heidleburg and brought to be buried in the family plot, near San Francisco.

COURT NOTES.

In the Superior Court, in the case of W. T. Grant vs. A. Walker, the demurrer to plaintiff's complaint was sustained. On the 23d inst. plaintiff filed amended complaint. The suit involves the title to water at Olancha.

On the same day complaint and petition for divorce was filed by Maggie Johnson vs. W. L. Randle, alias Martin Johnson. P. W. Forbes, attorney for plaintiff.

In the case of L. Munzinger vs. Adelaide Munzinger the case was set for trial on the 12th inst.

Swansea Mining Company vs. John Dunphy et. als., injunction dissolved.

THE MIDDLETON CASE.

In the case of the People vs. S. A. Middleton, Defendant appeared in Court with his counsel, W. P. George. District Attorney Gill and A. R. Conklin Esq. appeared for the People. The roll of the special venire of 40 jurors was called and all answered to their names. H. J. Robinson was excused by the Court. Warrants were issued for James Mullen, D. D. Leby and A. Hukill as defaulting witnesses. On filling the box with trial jurors Messrs. Hunter, Kispert, Stevens, Clark and Partridge were challenged by the defense and excused. Peter McGann was excused for being deaf. Defense peremptorily challenged jurors Thomsen and Lacey; Prosecution, R. Van Dyke. C. Meysan, W. Meyers and T. Richards were sworn to try the case. The Court took a recess till 2 o'clock p. m., when it reconvened. The box was again filled by lot. Jurors Lucas, Edwards and Castro were challenged by Defense and excused. Defense peremptorily challenged H. Hamilton, C. M. Green, G. H. Palmer, W. J. Jenkins and Fred G. Burckhardt were sworn to try the cause. Jurors Harvey and Spear were challenged by Defense and excused. A. D. Gilbert, W. K. Miller and D. Williams sworn to try the case. Prosecution peremptorily challenged Wm. Boyd and R. S. Carrasco and Defense, J. E. Shepherd. J. H. Dodge was sworn to try the cause. C. A. Skinner was excused. W. D. Eakin, L. A. Anger and Fred Albers were peremptorily challenged by the Defense. R. H. Runkle was sworn to try the case, completing the jury as follows: C. Meysan, W. Meyers, T. Richards, C. M. Green, G. H. Palmer, W. J. Jenkins, Fred G. Burckhardt, A. D. Gilbert, W. K. Miller, D. Williams, J. H. Dodge and R. H. Rankle.

The Clerk read the information and stated that the Defendant plead "Not guilty."

The Court admonished the jury and took a recess until Friday March 1st, at 10 o'clock a. m.

Chance for Competition.

MR. L. WOOD:—*Dear Sir:*—We recently had a very pleasant call from Mr. C. Mulholland, of Independence, Cal., and in the course of conversation he explained to us the situation in which the merchants of Owens Valley find themselves. In this connection we beg to express our belief that by drawing the trade of Owens Valley to this point Inyo county as well as Los Angeles will be benefited thereby.

Take into consideration the fact that instead of sending your teams to Mojave empty they could haul to that point your productions, taking back with them goods shipped from this point. Whatever we can do toward bringing your trade this way we certainly wish to do, and we would like to have your ideas in this matter. We have written to quite a number of merchants in your vicinity and should you think it worth our while to do so we should be pleased to send one of our salesmen among you. The trip, however, is an expensive one and involves considerable loss of time for the salesman who comes out and we would therefore hardly like to send him unless we had some idea of what could be done.

Freights, including hauling, as Mr. Mulholland explained the matter, will be about $5 per ton less than you are at present paying, and so far as prices are concerned, we are perfectly willing to make them as close as it is possible to do. There is no doubt, so far as we can see, but what San Francisco merchants have been charging you excessive prices, knowing that they had no competition for your trade, and we feel satisfied that it will be greatly to your advantage to turn it this way.

Awaiting your views on this subject, we remain, very respectfully yours,

M. A. NEWMARK & CO.

A Valuable Find.

In a letter lately received from Sam. Chalmer he says: "Since last writing I have discovered a new mine half a mile from my copper mine in a northerly direction. I have four distinct formations on my ground—limestone, granite, slate and porphyry. The ledge crops out in limestone 15 feet wide and runs 300 feet, cutting through granite, slate and porphyry and opens out 80 feet wide, showing good hanging wall. This is what is in sight. I have not yet found the foot wall as the lower part of the vein is covered up with loose rock and dirt. There is float rock broken from the ledge that will weigh 50 tons. The ore throughout the vein is of a light blue color and is free milling. The mine is situated on a steep hillside and can be easily developed by tunneling. There being so much chloride of silver in the ore makes it valuable for shipping. There is float rock enough to keep me sorting for two years. When I find the foot wall I will write and let you know."

The G. A. R. Ball.

The G. A. R. Ball at Lone Pine on the 22d was the most successful affair givin at that place for a long time. Many visitors from other town were in attendance. The hall was nicely decorated and was opened for dancing at half-past eight, about sixty couples being present. Supper was given at the Whitney House. The G. A. R. members have every reason to feel proud of their success in entertaining their guests. Among those present from Independence were Mr. and Mrs. Mairs, Mr. and Mrs. Matlack, Mr. and Mrs. Enos, Mrs. Lillard, Miss Annie Kohler, Miss Mary Mulholland, Missess May and Dora Shepherd Misses Anna and Sarah Kispert, Miss Pressy Reynolds Misses Jessie and June Skinner, Messrs. McIvor, Woodruff, Holbert, Rhine, Whittaker, Densmore, Smith, Aguirre, Conklin Skinner and Mulholland.

An Old Timer.

Mr. A. M. Phlegar, of Bodie, is at Independence, having been here for the past week. Mr. Phlegar is an old time Inyoite, having been at Panamint, Darwin and Lookout many years ago. This is his first visit to Owens Valley for ten years and, of course, he finds many changes. Like all others who come here he expresses the conviction that our county cannot help but have a great future. On the same train with him were a number of San Francisco men who have land interests here and who will develop them. The natural resources are here and will inevitably push the valley to the front.

How to Get Here.

Many letters are being received from parties at or near Los Angeles asking questions in regard to Owens Valley and the manner of getting here. The following in regard to the route may be of interest: From Los Angeles to San Fernando the distance is 22 miles, over a level road; thence to Newhall, 9 miles, part of the way being quite hilly. From Newhall to Elizabeth Lake, 34 miles, 16 miles of which is heavy grade through the San Francisquito canyon. From the lake to Mojave is 35 miles, mostly level and good road except after heavy rains, when the adobe in Antelope Valley becomes soft. From Mojave to Desert Spring the road is excellent, the distance being 25 miles; there is good water at this point, but no other accommodation. From this place the road passes through Red Rock canyon, a beautiful piece of scenery. The canyon is 6 miles long with easy grade, but is very sandy. There is water in the canyon but stock should not be permitted to drink as it is said to be injurious. From the summit of the the canyon to Raymond's (Coyote Holes) it is 19 miles, making the distance from Mojave 50 miles. Good accommodations can be had for persons and stock and the drive can easily made in one day. From Raymond's to Indian Wells, 6 miles; this being a watering point. Little Lake is 22 miles from the Wells, there being no water between the two places. From the lake to Haiwai is 13 miles over good road. This place is the property of Mr. Bellows and good accommodations can be had when desired. From Haiwai to Olancha the distance is 9 miles; the road is level but quite sandy. Olancha is one of the old stage stations and is a regular stopping place. Travelers receive the best attention from "Pap" Walker, the proprietor. The drive from Raymonds to Olancha is commonly made in one day. Olancha is the first point reached in Owens Valley and is situated at the southern end of the lake. From this point to any place in the Valley water and supplies can be reached in short distances. On the whole the road is very good. The only place a stranger might go astray is in leaving the Borax Lake road at Red Rock. It this is guarded against there is no danger of getting lost. In regard to obtaining land here no general directions can be given. The best way for anyone desiring to locate here is to make a personal inspection. Land prices are low and within the reach of persons of moderate means who may desire to acquire homes. A visit here will afford the most conclusive proof of the great advantages claimed for the Valley.

The 22d at Big Pine.

During the forenoon many people began to gather in town from the surrounding country, a few being present from Independence. In the afternoon the colt race was called. Five two-year-olds made their appearance, all of them in good condition. The distance run was a quarter mile, a good track having been made in the lane north of town. The colts got away to a good start, Billy the Kid, owned by James Lane, coming under the wire first. A claim of foul was made by those having pools on the race and Lane consented to run again. The next dash was won by Big Pine, owned by R. P. Hessian. Again a foul was claimed and it being too late to finish the race that day it was postponed until the next afternoon. In the last dash Big Pine came under the wire a length ahead and was given the race. All pools were declared off. The ball at Crocker's Hotel was well attended. The large dining room was cleared for dancing and made a good ball room. A jolly good time was enjoyed by all.

NEW ADVERTISEMENTS.

WANTED

About 60 head of young cattle to handle on shares. I have excellent summer range and the best of winter feed. The stock will be well attended to. A graded bull from Mr. Hunter's thoroughbred Durham will be turned with the band. For particulars apply to JAMES JENKINS,

Medical Aid, when necessary, brought home to you. 50 Wonderful FEN PICTURES. Married or single, sick or well, should read. Sent sealed by DR. WHITTIER, St. Louis, Mo. CUT THIS OUT AND SEND WITH ORDER.

THE NEWEST TELEPHONE.

An Instrument Which Dispenses With the Mouth-Piece and Sound Waves.

"Hello, hello! Do you hear me all right? I am talking through 10,000 ohms of resistance, equal to 500 miles."

"Yes, that comes perfectly plain," replied the reporter, pressing a button against his throat, near the Adam's apple instead of talking to a hole in the wall.

The Lowth stettio-telephone is a new departure in the field of telephony. The instrument is a marked departure from the Bell telephone, and though it has no diaphragm it transmits sound as perfectly as the Bell system. It is a combined tranmitter and receiver. A hollow extension about four inches long is attached to the receiver, from the end of which a small button protrudes slightly. This button is placed against the throat near the vocal chords, and the receiver is held against the ear in the usual manner. When the operator speaks the vibrations of the throat are transmitted with distinct clearness. The instrument is operated not by sound waves, as is the Bell telephone, but by the muscular vibrations that accompany the utterance of words. It is claimed by the patentees that for this reason the instrument can be used more successfully in long-distance talking than the old system, because there is no limit to the strength or number of the batteries that can be used. The diaphragm of a Bell instrument will crackle so loudly when overcharged with electricity that the sound of the voice can not be heard.

The inventor, James Lowth, has been experimenting and working on the instrument for over ten years. When he first applied for a patent, three years ago, the authorities at Washington thought him a crank and refused to issue one. He attached the instrument to wires in the office and asked over it: "What do you think now?" Back over the wire came, "I give in. It works perfect."

Some of the best patent lawyers in the country have been consulted and say that as the diaphragm is dispensed with the instrument does not in any way infringe on the Bell patents. It has been successfully operated between this city and Milwaukee, and in Pittsburgh it worked perfectly over a line seventy-five miles in length on which were twenty-five instruments. A company has been organized with headquarters in this city and the manufacture of instruments will soon begin.—*Chicago News.*

A COMPREHENSIVE SIGN.

An English Village Poo-Bah and His Strange Stock of Merchandise.

A gentleman sends the following copy of a sign displayed in an English village near Corfo Castle, which was come across during a friend's search for lodgings: "Rodgers Gyles, surgin, parish clerk and skulemaster, groser and hundertaker, respectably informs ladys and gentlemen that he drors teeth without a minit, applies laches every hour, blisters on the lowest tarms and visicks for a penny a peace. He sells godfathers kordales, kut korns, bunyons, dokters hosses, klips wunce a month, and hundertakes to look after everybodies nayls by the car. Joscharpes, penny wissels, brass kannelsticks, fryingpans and other moosikal hinstruments hat grately reduced figers. Young ladys and gentleman larn their grammer and their language in the purtiest manner, also grate care taken of their morrels and spellin'. Also zarm zinging, taycling the base viol, and other sorts of fancy work. Quadrills, pokers, weazles and all country dances tort at home and abroad at perfekshun. Perfumery and snuff in all its branches. As times is krul bad I beg to tell ee that I have just beginned to sell all sorts of stashonry ware, cox, hens, vouls, pigs and all other kinds of poultry. Blackin brushes, herrans, coles, skrubbing brushes, traykel, and godly bukes and bibles, mice traps, brick dust, whisker seed, morrel pokkerankerchiefs, and all sorts of sweetmaites—including taters, sassages, and other garden stuff. Bakky, zigars, lamb's woyle, taykettles and other intoxzikatin' likkers—a dale of fruits, hats, zongs, hair-oyle, pattins, bukkits, grindin'-stones and other aitables—korn and bunyon zalve and all hardware—As I laid up a large azzortment taype, dog's-mate, lolipops, gingginbeer, matches, and other pickles, such as Hepsum zalts hoysters, winzer sope, and zetrar—Old rags bort and sold here and nowhere else—New laid eggs by me, Rodger Gyles, singing birds keeped such as howls, donkies, paykox, lobsters etzear."—*Montreal Gazette.*

—What is there that some people will not hold pastors responsible for? A meeting house in a certain city not long since showed signs of weakness in the walls, was condemned, and a new house became necessary. One would suppose the architect and builders might reasonably be called to account, but in some way the people connected the misfortune with the minister and he has been forced to resign.—*Chicago Standard.*

—Young Mr. Waldo (to Miss Breezy)—"What are your views, Miss Breezy, in regard to the question, 'Is Marriage a Failure?' Miss Breezy (of Chicago)—"Why, I can't speak from experience, of course, Mr. Waldo, but I have a very dear friend who was married a year ago, and she has found it a delightful success." Mr. Waldo—"She is happy, then?" Miss Breezy—"Oh, very. Mr. Waldo. Clara draws $50 a week alimony."—*Harper's Bazar.*

—"To-morrow, Maria, will be your birthday, and I want to give you some appropriate present. What shall it be?" "Whatever your kind heart may suggest, John." (Next day.) "Maria, you know how your poor back has suffered from pulling off my boots in the evening. It will not suffer any more, my love. See! I have brought you a nice new bootjack, which I will use hereafter instead."—*Chicago Tribune.*

SUGAR FROM BEETS.

One of the Most Prosperous and Extensive of German Industries.

The beet-sugar industry in Germany has grown to large proportions in the last twenty years, and has been thoroughly systematized. It was introduced in Hanover in 1864, and sugar is now produced in all the southern portion of Hanover, the larger part of Brunswick, the Prussian part of Saxony, and also in a part of the kingdom of Saxony. Perhaps two-thirds of all the German beet sugar is raised in these localities. It requires very fertile ground to raise the sugar beet, and bone dust, phosphates, Chilian saltpeter and composts are freely used. The plant is exceedingly exhausting to the soil, and farmers, to preserve their ground, observe strictly the rule of rotation in crops, only planting a field in beets once in seven years, as a rule. The planting is done in May. The ground is thoroughly prepared beforehand. It is plowed twice in the fall preceding, the first plowing being to the depth of 4 inches, the second 16 or 18 inches. Then just before planting it is harrowed and rolled until it is as smooth and hard as a floor. The seed is drilled in rows 1 foot apart. When the young plants are about 3 inches high they are thinned out, leaving three or four in a hill, 1 foot apart, and these are subsequently reduced to one in a hill. The cultivation is done mostly by plow, the crop being plowed about four times in a season, both lengthwise and across the rows. The women and children, meantime, are constantly going over the field keeping out the weeds by hand. The gathering season extends from September 18 to February 15. Men go ahead with long spades and loosen each hill, the women and children following, who lift the roots out of the ground and pile them together. After the tops are removed they are either taken directly to the community factory or covered deeply with earth to preserve them. The factory system is a very interesting part of the business. Factories are established in each neighborhood. In all the successful ones capitalists are rigidly excluded, and only farmers may hold shares. Each farmer must, for each share he holds, cultivate from three to five acres in beets. The average product is 17,000 or 18,000 pounds per acre, for which the farmer gets about 90 pfennig per 100. He is guaranteed a sure market for his crop at a fixed price, and gets a dividend out of the profits at the end of the season. The pulp of the beets, after the sugar is taken out, makes a first-class food for cattle, and this the farmer gets also at a fixed price. The cultivation is subject to inspection by the factory, and each inspector must be not only a first-class farmer, but a chemist. He must live close to the factory, and gets a good salary, besides a per cent. of the profits. Most of the sugar goes to refineries at the large cities. At each factory is also a government inspector, who examines each lot and fixes the tax. Each wagon-load of beets is sampled by a chemist, and if they fall below a certain grading as to percentage of sugar, they are rejected. This is to prevent the use of inferior composts, which would make large beets with little sugar in them. One nice feature about the business is that on all the sugar which is exported the government returns to the farmer an amount which is more than equivalent to the tax. This results in a very large portion of the crop being exported.

SMALL INDUSTRIES.

The Insignificant Shops in Which the Famous Sheffield Cutlery Is Made.

The Sheffield cutlery—one of the glories of England—is not made by machinery; it is chiefly made by hand. There are at Sheffield a few firms which manufacture cutlery right through from the making of steel to the finishing of tools, and employ wage-workers, and yet even these firms—I am told by my friend, E. Carpenter, who kindly gathered for me information about the Sheffield trade—let out some part of the work to the "small masters." But by far the greatest number of the cutlers work in their homes, with their relatives, or in small work-shops supplied with wheel power, which they rent for a few shillings a week. Immense yards are covered with buildings, which are sub-divided into series of small work shops. Some of them cover only a few square yards, and there I saw smiths hammering, all the day long, blades of knives on a small anvil, close by the blaze of their fires. Occasionally the smith may have one help or two. In the upper stories scores of small workshops are supplied with wheel power, and in each of them three, four, or five workers and a "master" fabricate, with the occasional aid of a few plain machines, every description of tools—files, saws, blades of knives, razors, and so on. Grinding and glazing are done in other small work-shops, and oven steel is cast in a small foundry, the working staff of which consists only of five or six men. When walking through these work-shops I easily imagined myself in a Russian cutlery village, like Pavlovo or Vorsma. The Sheffield cutlery has thus maintained its olden organization, and the fact is the more remarkable as the earnings of the cutlers are very low as a rule; but, even when reduced to a few shillings a week, the cutler prefers to vegetate on his small earnings than to go as a waged laborer in a "house." The spirit of the old trade organizations, which were so much spoken of five-and-twenty years ago, is thus still alive.—*Prince Krotapkin, in Nineteenth Century.*

—Rusty black woolen goods can also be freshened by sponging with equal parts of ammonia and alcohol, diluted with a little tepid water, or yet it can be soaked in warm soap suds for a couple of hours, and then dipped in a solution of one ounce of extract of logwood to a pint of warm water, added to a couple of gallons of warm water. Let the goods stand in this solution some hours, and rinse well, adding some milk to the last water; iron while still damp, and on the wrong side.—*Christian at Work.*

EFFECTS OF TOBACCO.

How the Weed Affects the Heart and Stomach—Dangers of Nicotine.

Tobacco contains an acrid, dark-brown oil, an alkaloid, nicotine and another substance called nicotianine, in which exist its odorous and volatile principles. This description of the active principles of tobacco is of importance to smokers; for, when tobacco is burned, a new set of substances is produced, some of which are less harmful than the nicotine and are more agreeable in effect, and much of the acrid oil—a substance quite as irritating and poisonous as nicotine—is carried off. These fire-produced substances are called from their origin the "pyridine series." By great heat the more aromatic and less harmful members of the series are produced, but the more poisonous compounds are generated by the slow combustion of damp tobacco. This oil which is liberated by combustion is bad both in flavor and in effect, and it is better, even for the immediate pleasure of the smoker, that it should be excluded altogether from his mouth and air-passages.

Smoking in a stub of a pipe is particularly injurious, for the reason that in it the oil is stored in a condensed form, and the smoke is therefore highly charged with the oil. Sucking or chewing the stub of a cigar that one is smoking is a serious mistake, because the nicotine in the unburned tobacco dissolves freely in the saliva and is absorbed. "Chewing" is on this account the most injurious form of the tobacco habit, and the use of a cigar-holder is an improvement on the custom of holding the cigar between the teeth. Cigarettes are responsible for a great amount of mischief, not because the smoke from the paper has any particularly evil effect, but because smokers—and they are often boys or very young men—are apt to use them continuously or at frequent intervals, believing that their power for evil is insignificant. Thus the nerves are under the constant influence of the drug, and much injury to the system results. Moreover, the cigarette-smoker uses a very considerable amount of tobacco during the course of a day. "Dipping" and "snuffing" are semi-barbarities which need not be discussed. Not much effect is obtained from the use of the drug in these varieties of the habit.

Nicotine is one of the most powerful of the "nerve poisons" known. Its virulence is compared to that of prussic acid. If birds be made to inhale its vapor in amounts too small to be measured they are almost instantly killed. It seems to destroy life, not by attacking a few, but all of the functions essential to it, beginning at the center—the heart. A significant indication of this is that there is no substance known which can counteract its effects; the system either succumbs or survives. Its depressing action on the heart is by far the most noticeable and noteworthy symptom of nicotine poisoning. The frequent existence of what is known as "smokers' heart" in men whose health is in no other respect disturbed is due to this fact.

Those who can use tobacco without immediate injury will have all the pleasant effects reversed, and will suffer from the symptoms of poisoning if they exceed the limits of tolerance. These symptoms are: (1) The heart's action becomes more rapid when tobacco is used; (2) palpitation, pain, or unusual sensations in the heart; (3) there is no appetite in the morning, the tongue is coated, delicate flavors are not appreciated, and acid dyspepsia occurs after eating; (4) soreness of the mouth and throat, or nasal catarrh, appears, and becomes very troublesome; (5) the eyesight becomes poor, but improves when the habit is abandoned; (6) a desire, often a craving, for liquor or some other stimulant, is experienced.

In an experimental observation of thirty-eight boys of all classes of society and of average health who had been using tobacco for periods ranging from two months to two years twenty-seven showed severe injury to the constitution and insufficient growth, thirty-two showed the existence of irregularity of the heart's action, disordered stomachs, cough and craving for alcohol; thirteen had intermittency of the pulse, and one had consumption. After they had abandoned the use of tobacco, within six months' time one-half were free from all their former symptoms and the remainder had recovered by the end of the year.—*C. W. Lyman, in N. Y. Medical Journal.*

—"Two years ago," remarked a prominent business man, "my house was robbed of $400 worth of stuff. Two of the gang were caught and sent to prison for five years each." "Well?" "Well, the other day a man came to me to sign a petition for their pardon." "No!" "True as I live. What do you suppose his argument was?" "He couldn't have had any." "But he did, though. He said the men got into my house by mistake. They intended to break into my brother's house, but got the localities mixed up, and he thought I ought to be willing to overlook a mistake in such a thing as that." "Did you overlook?" "No, and the fellow went away saying he hoped I might never know what it was to languish in a dungeon under an unjust sentence."—*Detroit Free Press.*

—The best way for a girl to bring an unreasonable lover to terms is to snub him; but she should not snub him too zealously, or she may succeed in bringing him to terms with some other girl.—*Journal of Education.*

The Coming Centennial.

The committee on the centennial celebration of the inauguration of Washington has arranged to have Governors and State Commissioners sail to Elizabethport to meet President Harrison on the morning of April 29th and accompany him to the foot of the seawall. The Governor of the State of Nevada has appointed United States Senators Jones and Stewart to represent the state at the celebration.

No remedy for sexual debility has ever been found that equals Dujardin's Life Essence. It restores feeble powers and invigorates the whole system. A simple trial will convince the most skeptical. Price, $1.50 a bottle. All druggists.

THE LUCKY ONES

Lifted From a Life of Labor to Comparative Opulence.

Fortune has not only smiled upon A. W. Adams of this city, but her face has taken on a broad grin. This facial expression is justifiable, and the dear creature could even be forgiven for bursting out into loud and uproarious shouts of joyous laughter, for Mr. Adams yesterday received $15,000 all in shining gold pieces for the paltry investment of $1 in the November drawing of The Louisiana State Lottery.

Mr. Adams is a carpenter by occupation, and resides at 915 Guerrero street.

"It's a great stoke of luck," he said to a *Call* reporter. "When I bought the ticket I had but the faintest, dreamiest, far-away idea that such fortune would be mine."

"I have been a hard-working man all my life, never hoping for more than the common comforts that attend industry and frugality, and it was left for The Louisiana State Lottery to raise me in one day from the necessity of labor to moderate opulence. What I thought was a dollar wasted proved to be a great speculation."

Mr. Adams is not yet 50 years old, and being in robust health will be able to spend many years in the quiet enjoyment of his snug little fortune. He is intellectually capable of appreciating the many pleasing features of life, and after satiating his fancy for travel will still have a sufficient competence to make the evening of his life pleasant.

There is a rumor whispered about, only in the strictest confidence, that Cupid will cut a figure in this turn in Mr. Adams' fortune, and that in winning the prize in the Lonisiana State Lottery he gained confidence in his speculative sagacity and will soon take a coupon in the matrimonial market.

Mr. Adams does not deny this soft impeachment, but merely says: "I wonder how they found it out?"

The wife of Max J. Franklin of the firm of Greenzweig & Co., Jewelers, is the lucky winner of $5,000 in the same drawing which enriched Adams.—*San Francisco (Cal.) Call, Dec. 2.*

THE "LOUVRE," SAN FRANCISCO.

Readers who patronize this favorite resort are unanimous in praising the "eatables and drinkables," as well as the popular prices, at which all are served.

SOUND BUSINESS PRINCIPLES.

The PACIFIC BANK, of San Francisco, has always adhered to solid business principles, and strictly avoided all speculation. The PACIFIC BANK is a striking example, and is foremost among the banks of this coast in stability, resources and popularity, and has often been called the model Bank of the coast.

THE "ORPHEUM," SAN FRANCISCO.

Why pay $1 or $1.50 for an evening's entertainment when you can see the best for 25 and 50 cents. Our readers will see the point at the "Orpheum."

France is again in a ferment, and a rising is feared. When the political dough is all ready perhaps the Boulanger will mold it.

CONSUMPTION CURED.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 *Power's Block, Rochester, N. Y.*

Tommy—I wouldn't like to be the preacher's little boy. Aunt—Why? Tommy—Oh, he's got hundreds and hundreds of slippers. They are scattered all over the house.

VALUABLE DISCOVERY.

A General of the army, for a number of years stationed in Alaska, discovered that the Indians were using herbs and plants that cured Dyspepsia, Headache, Constipation, Rheumatism, Piles, Asthma, etc. He will send trial package, with directions, to any address by mail, upon receipt of $1.00. Address General Thompson, Lock Box 2440, San Francisco, California.

"That's an eat thing in clothes," said the cannible, as he saw a missionary approaching.

GENTEEL QUACKS.

"Yes, it pays," said a big, fat physician, with a name which is known throughout the medical world. "I have a practice worth $40,00 a year." "Women?" "Yes, you've guessed it first time. They pay $10 every time they come into my office. When one gets on my list I tell you she stays"; and Dr. H—— laughed long and loud. This is quackery—gilt-edged, genteel quackery—to keep suffering women paying tribute year in and year out, and doing them no good. Dr. Pierce's Favorite Prescription cures the peculiar weaknesses and diseases of women. It does not lie to them nor rob them.

Jinks—What did you swear off on this time? Winks—Sitting in draughty churches.

FOR RICKETS, MARASMUS, AND WASTING DISORDERS OF CHILDREN,

SCOTT'S EMULSION of Pure Cod Liver Oil with Hypophosphites is unequalled. The rapidity with which children gain flesh and strength upon it is very wonderful. Read the following: "I have used Scott's Emulsion in cases of Rickets and Marasmus of long standing, and have been more than pleased with the results, as in every case the improvement was marked."—J. M. MAIN, M. D., New York.

The moths have strange tastes. They frequently appear in overcoats in summer weather.

A perfect specific—Dr. Sage's Catarrh Remedy.

One ounce of arresting somebody for carrying concealed weapons before he kills somebody else is worth a pound of murder trial.

BEAUTY of Skin & Scalp RESTORED by the CUTICURA Remedies.

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Dull Aches, Pains, and Weaknesses instantly relieved by the CUTICURA ANTI-PAIN PLASTER, the only pain-killing plaster. 25c.

AGENTS WANTED for our fast selling books and bibles. Distance no hindrance. Big Profits. Empyreal Pub. House, St. Paul, Minn.

CONFIDENT OF THEIR MERIT.

Miss A. M. Peters, Moulton, Ala., writes under date of September 22, 1888:

"Enclosed please find $1 00, for which send its value in BRANDRETH'S PILLS. I would like to have them at as early a date as possible, as there is a considerable yellow fever scare in this part of the State. In Decatur, Ala., about twenty-five miles from this place, fifteen cases are reported. I intend to try your pills on any cases that may appear in my family. I have full confidence that if they are taken in time they will cure it, and almost any other disease."

Soulful Youth (languidly)—Do you sing "Forever and Forever"? She (practically)—No, sir; I stop for meals.

ARE WE TO HAVE ANOTHER WAR?

Some political prophets aver that we shall. Be that as it may, the battle waged by medical science against disease will never cease until we arrive at that utopian epoch when the human family shall cease to be afflicted with bodily ailments. One of the most potent weapons which the armory of medicine furnishes, is Hostetter's Stomach Bitters, which is of special utility as a family remedy, as it is adapted to the immediate relief and ultimate cure of those disorders of the stomach, liver and bowels which are of commonest occurrence. Indigestion, biliousness and constipation are inseparable companions, and these ailments are completely eradicated by the Bitters. But the remedial scope of this superlatively wholesome and genial medicine takes in also nervous ailments, rheumatism and kidney troubles; its action in these, as in the other complaints, being characterized by unequaled thoroughness.

Almost before we know it, 1889 is here. The years seem to have mastered the problem of rapid transit.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine DR. C. MCLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

A man's pocketbook after the holidays does not resemble a cloud. The cloud has a silver lining, you know.

SHOCKING ACCIDENT.

So read the headlines of many a newspaper column, and we peruse with palpitating interest the details of the catastrophy, and are deeply impressed by the sacrifice of human lives involved. Yet thousands of men and women are falling victims every year to that terrible disease, consumption (scrofula of the lungs), and they and their friends are satisfied to believe the malady incurable. Now, there could be no greater mistake. No earthly power, of course, can restore a lung that is entirely wasted, but Dr. Pierce's Golden Medical Discovery will rapidly and surely arrest the ravages of consumption, if taken in time. Do not, therefore, despair, until you have tried this wonderful remedy.

A man with a new idea cannot be too careful of it. It may get away from him and become original with some one else.

For Coughs, Asthma, and Throat Disorders, use "*Brown's Bronchial Troches.*" 25 cts. a box.

PAID FOR!

We expect to pay for this ad., and we hope you will at least read it over carefully. You may not find it convenient to send us an order just now, on account of bad roads or limited funds, but surely you will not neglect so important a thing all through the year 1889. You may possibly go on buying at high prices and pull through the year somehow, but if you will try the spot cash plan, you will find out how much it is to your advantage—better goods, too, for cash, as well as cheaper. Sugar is lower again—5c by the barrel for Golden C and about 6½c for White; changes frequently. Tea at 20c equal to that for which you pay 50c; then all the way up to 50c for some of the finest brands. Have a few chests in baskets of 1 lb. and 2½ lbs. at 30c; Tea is not extra, but the baskets are worth the money. Some in neat work-boxes at 50c lb.; really good Tea. But where you save the most is in Dry Goods, Notions, Hardware, Wall Paper, Stationery, Crockery, Glassware, Dried Fruit, and the thousand and one articles used in the family. We keep all these things, and publish a list of them, with correct prices, every month. This list will be sent to you to look over if you write for it to Smith's Cash Store, No. 418 Front Street, San Francisco, Cal.

PIANOS. 1st Premiums. 25,000 in use. 20 years established. New patented Steel Tuning Device, in use in no other Piano, by which our Pianos stand in tune 20 years, good for 100; not affected by climate. No wood to split, break, swell, shrink, crack, decay, or wear out; we guarantee it. Elegant Rosewood Cases, 3 strings, double repeating action, ebonized ivory keys; the Famous ANTISELL. Call or write for Catalogue, free. T. M. ANTISELL PIANO CO., Manufacturers, Odd Fellows' Hall, Market and Seventh Streets, San Francisco.

SPIES OF WAR.

Discussion as to Whether It Is an Honorable Undertaking.

Is the service of a spy in war honorable? It certainly cannot be set down as always dishonorable, since some men who have performed it have been regarded as in the highest degree worthy of honor. Nathan Hale, of Connecticut, an American patriot of the highest character, volunteered, after Washington's defeat on Long Island, to go to the mainland and seek information of the strength, plans and situation of the enemy. Hale was a brave young officer, and had distinguished himself by dashing and brilliant service. Probably he had no liking for the work of a spy; but it was enough for him that his commander desired a brave and prudent man for the service. He volunteered, and was accepted.

Hale crossed to the mainland in safety, obtained full knowledge of the situation, and set out to return to Washington's camp. He was discovered by the enemy and hanged in New York by the order of Sir William Howe, without trial. His last words were: "I only regret that I have but one life to lose for my country."

The virtues and bravery of Hale alone would have invested the service of the spy with a considerable degree of honor, even if there had not been many other spies whose work had been almost, if not quite, as brave.

But there is no doubt that the duty of a spy is commonly regarded as in some sense dishonorable, even by those who take advantage of it.

Vattel, the author of the "Law of Nations," says that "a man of honor, who would not expose himself to die by the hand of the common executioner, ever declines serving as a spy; he considers it beneath him, as it seldom can be done without some kind of treachery. A sovereign, therefore, cannot lawfully require such a service of subjects, except, perhaps, in some singular case, and that of the last importance."

Following this idea, the French have always had a certain repugnance to spies, even their own. The story is told that, at the time of Napoleon I, a French spy was charged with making a plan of the fortifications of Mayence. When he arrived at that city, he found the German garrison expecting the arrival of an English general. The spy was able to speak the English language perfectly well, and it occurred to him that it would be an excellent plan for him to impersonate this English general.

He carried out his plan so skillfully that no one suspected that he was not a genuine English officer; and as the English were in alliance with the Germans he was taken through all the fortifications and given every item of information that he wanted.

When he had seen and taken note of everything, he disappeared, and returned to Napoleon's headquarters. His information proved of great service to his country, and it was proposed to the emperor to decorate the man with the cross of the Legion of Honor.

"No, indeed," said Napoleon. "I did not establish the Legion of Honor to reward services of that kind."

But he gave the spy $5,000 in money.

In opposition to the doctrine laid down by Vattel and Napoleon, it may be urged that the very possibility of dishonorable death, and the knowledge that a spy's service may be regarded as "beneath a man of honor," may render the voluntary performance of this duty more an act of bravery than the most daring service on the battlefield.

The soldier has the rush and excitement of battle to spur him on to brave deeds; the spy has before him the possibility of an ignominious death. He must meet peril alone, and in cold blood. The soldier's brave service may be the result of a sort of physical courage, while that of the spy must be the result of moral courage.

As America has honored a spy, in the person of Nathan Hale, it is distinguished as the first nation to institute a full trial by court martial of the spies of an enemy. Previous to this, it had been customary to send spies to the gallows, as Nathan Hale was sent, merely upon the order of a commander in chief.—Youth's Companion.

De Quincey's Deference.

De Quincey suffered from indigestion. His tastes were a little troublesome to the servant who prepared his repast. Coffee, boiled rice and milk, and a piece of mutton from the loin were the materials that invariably formed his diet. The cook, who had an audience with him daily, received her instructions in silent awe, quite overpowered by his manner, for had he been addressing a duchess he could scarcely have spoken with more deference. He would couch his request in such terms as these: "Owing to dyspepsia afflicting my system, and the possibility of any additional disarrangement of the stomach taking place, consequences incalculably distressing would arise; so much so, indeed, as to increase nervous irritation and prevent me from attending to matters of overwhelming importance, if you do not remember to cut the mutton in a diagonal rather than a longitudinal form."—Pittsburg Bulletin.

Transporting a Herd of Buffaloes.

The Manitoba fast freight train from Winnipeg brought in a herd of eighty-three live buffalo, which were on their way to C. J. Jones' ranch, near Garden City, Kan. Mr. Jones bought these queer cattle from Warden Benson, of the Northwest Territory, who since 1877 has succeeded in raising this herd from five animals captured at that time. Mr. Jones has already on his ranch about fifty head of bison, and a goodly number of animals resulting from a cross between the bison and ordinary beef cattle. The matter of domesticating these animals is attracting much attention among breeders, as the wild bison is almost extinct, and buffalo meat is worth 50 cents a pound in Chicago. A great many curious sightseers visited the Manitoba yards while the cars stood there.—Minneapolis Tribune.

DEADLY PROSPECT HOLES.

Some of the Dangers Attending Traveling in the Sierras.

As one approaches today the rising slopes of the Sierras in California, the more especially in that portion extending from Nevada county on the north, through placer, El Dorado, Calaveras and Mariposa counties, on the south, certain signs and indications are met with, the landmarks, so to speak, of the pioneers of '49.

I rode pretty much all through that country on horseback some year or so ago, and came near losing my life in a number of these "landmarks," which have proven fatal to many others before and yet remain a constant source of danger to the unwary traveler in that region.

I refer now more particularly to that part of El Dorado county lying within a radius of fifty miles of Placerville, or Hangtown, as it was called in the Argonaut days. Here is where the greatest rush to the gold diggings took place. The creeks and mountain streams all about contained rich deposits of gold, and the gold hunters fairly swarmed over this portion of the country.

When the yield of the river beds was exhausted the miners began sinking prospect holes. These varied in depth from ten to one hundred feet. Sometimes when "pay gravel" was struck great streams of water would be called into play, cutting wide chasms into the soil and often washing away mountains themselves. These claims, when abandoned and when afterward covered with a growth of underbrush, rendered it dangerous to travel in their vicinity at night for fear of falling into one of these artificial precipices, which could not be seen until the very brink was reached.

The prospect holes, however, are another matter. These are met with everywhere in the region I have described, often not more than ten feet apart. They are rarely more than five feet in diameter and, owing to the growth of underbrush, are veritable pitfalls and death traps.

Many a man has started out on a prospecting tour and tumbled headlong into one of these pits, never to be heard from again. Wild animals of all kinds also are made the victims of these deadly prospect holes.

My first experience in this regard taught me a valuable lesson that I heeded thereafter. I was walking through the woods one day with a rifle, when I scared up one of the wild hogs that are pretty thick in that country. I made up my mind that Mr. Hog would be my meat, as these animals are very good eating, and so I started in chase. Owing to the trees I couldn't get a good shot.

Well, I chased that hog for perhaps a hundred yards or so when, to my astonishment, he suddenly disappeared as if the earth had swallowed him. I couldn't make it out at all, so I rushed to the spot as quick as I could.

The first thing I knew I felt the ground give way beneath my feet, and by some happy accident I was barely prevented from falling into a hole which, as I afterward ascertained, was eighty-five feet deep. I managed to clutch hold of a projecting bush in the nick of time or I should have caught that hog with a vengeance.

The hog is probably there yet. The hole certainly is, anyhow, and if any one contemplates a trip through that section of the country it would be well for him to bear these facts in mind.—New York Herald.

A New Fad.

I was passing through the halls of an upper story of one of our big hotels the other day, as the guest of a boarder there. "Do you see those glistening spots on the hall carpet?" he asked me. "Yes." "Do you know what causes them?" "No." "Well, I can tell you, for I've watched the thing. It's one of the results of the women's growing habit of chewing gum—see?" I confessed my obtuseness—I didn't understand. "Well," said my friend, "the women boarders here, as elsewhere, chew gum—it's about the only thing they have to do—and not knowing what to do with their quids when going to their meals or to the parlor they slyly take the sticky stuff out of their mouths and drop it on the hall carpets, where it is soon smashed flat under foot—that's how it is." I walked through the halls and through the parlors of the hotel afterward, and discovered many of the shining spots on the rich carpets. My friend is right. I watched and satisfied myself that his theory of the cause of those "damned spots" is correct. In fact, I saw some very nice and charming women, before entering the parlors, the dining rooms and the elevators, quietly casting their bits of chewing gum on the hall carpets. I wonder if the hotel men and their housekeepers understand this new fad?—Chicago Journal.

Over Eating.

It is a decree that while civilized man cannot live without dining, he might live a great deal longer without so much dining, or rather without dining so extensively. Sir Henry Thompson says that he has been compelled by facts to think that more mischief in the form of disease has accrued to civilized man from erroneous habits in eating than from the use of alcoholic drink. He also declared himself in doubt whether improper and inordinate eating were not as great a moral evil as inordinate drinking. Many of our best physicians say that the habit of over eating is at the bottom of most troublesome diseases. Doubtless this habit is most often laid in childhood. How many mothers feed their babies as often as they cry, taking it for granted in the most imbecile manner that the baby cries for food, when more often the helpless little victim cries because it already has had too much food. When the stomach once becomes accustomed to being crowded with food, if the supply is cut short there is at first a gnawing sensation that is frequently mistaken for hunger. Persevere a little longer in your abstinence, and you will find yourself benefited by it.—Hall's Journal of Health.

BARTIMEUS.

I would receive my sight; my clouded eyes
  Miss the glad radiance of the morning sun,
The changing tints that glorify the skies
  With roseate splendors when the day is done;
The shadows soft and gray, the pearly light
Of summer twilight deep'ning into night.

I cannot see to keep the narrow way,
  And so I blindly wander here and there,
Groping amidst the tombs, or, helpless, stray
  Through pathless, tangled deserts, bleak and bare.
Weeping I seek the way I cannot find—
Open my eyes, dear Lord, for I am blind.

And oft I laugh with some light, thoughtless jest,
  Nor see how anguish lines some face more dear,
And write my mirth, a mocking palimpsest,
  On blotted scrolls of human pain and fear;
And never see the heartache interlined—
Pity, O Son of David! I am blind.

I do not see the pain my light words give;
  The quivering, shrinking heart I cannot see;
So, light of thought, 'midst hidden griefs I live,
  And mock the cypressed tombs with slightest glee;
Open my eyes, light, blessed ways to find—
Jesus, have mercy on me, I am blind.

My useless eyes are reservoirs of tears,
  Doomed for their blind mistakes to overflow;
To weep for the thoughtless ways of wandering years,
  Because I could not see—I did not know.
These sightless eyes—than angriest glance less kind—
Light of the World, have pity! I am blind.

—Robert J. Burdette in Christian Advocate.

A Trade in Dog Skins.

It is well known that in many districts of Manchuria and China there is a great trade in dog and goat skins, which are employed in the manufacture of robes and mats; but it is commonly supposed that the skins are remnants of dirty and filthy animals which abound in those quarters. The idea, however, is a mistake, for the business of rearing dogs for this purpose is well established and is as systematic an industry as sheep farming. There are countless dog farms scattered over the unknown regions of Manchuria and Mongolia, where from twenty to 100 dogs are reared every year, and where the inhabitant is esteemed according to the number of dog skins in his possession. It is probable that the most beautiful dogs are to be found in these countries, for the exceedingly low temperature of winter, where the thermometer falls to 30 degs. F. below zero, produces a magnificent coat and skin. The prices obtained are, however, very unprofitable, a full sized robe eighty inches square, containing the skins of eight animals, being quoted at 14s. 6d. The value of trade from Newchwang last year is stated at £40,000.—London Times.

Remarkable "Deal" in Coal.

A coal dealer in the suburbs of Boston, relates The Budget, was called upon at his office by a poor, hardworking woman, and requested to send a basket of coal to her home. "We do not deliver so small a quantity," was the merchant's reply. "It is our invariable rule never to deliver less than a quarter of a ton."

"But I cannot pay for so much," was the pitiful confession, "and I have left my little children at home in a fireless room. What am I to do?"

"Well," returned the dealer, a kindlier light beaming in his eye, "I cannot depart from my rules as to the quantity." Then, turning to his clerk, he continued: "John, have a quarter of a ton of coal sent to the woman's address as soon as possible."

"But I cannot pay for so much," she expostulated.

"I already understand that you can't, so I will charge it to the children. Give yourself no more uneasiness about the debt than they will be liable to do. Good morning."

A Successful Inventor.

We wish all American inventors could reap as bountiful a harvest of fortune as Hiram Maxim, of New York, who has received $850,000 for his last production, the quick firing gun, in England. The first Maxim essay, the small one barreled mitrailleur, has not been a success except in theory, the tremendous discharge of 1,000 shots per minute soon being too much for any single bore, however excellent of design or material. Maxim may be fairly accounted a prospective millionaire, having previously to his ordnance inventions received some $100,000 in the United States for his electric lighting patents. He is still a young man, and resides at Thurlow Lodge, which he has purchased, about twenty miles from London. The old mansion, surrounded by very fine grounds, is one of the historical English houses, having been the property and home of Lord Thurlow, the great English chancellor.—Army and Navy Journal.

They Got Their Preacher.

A colored brother in the Alexandria valley, down in Georgia, sent the following request for a minister to his bishop: "Send us a bishop to preach. If you can't send us a bishop send us a sliding elder; if you can't send us a sliding elder send us a stationary preacher; if you can't send him, send us a circus rider; if you can't spare him, send us a locus preacher; if you can't spare a locus preacher, send us an exhauster." That settled it, and he got a preacher.—Lincoln Journal.

An Important Collection.

The curator of the Luxembourg collections in Paris is Etienne Arago. His method with regard to paintings and statuary added to the collection is to secure sketches and models of the first draft, notes with respect to sales, criticisms on the object in question, photographs thereof, and autograph letters from the artist. In this way he builds about each work of art a series of documents and pieces justificatives which may be of the utmost importance to students of art or writers.—New York Times.

Measure of Wealth.

In some parts of Africa a man's wealth is judged by the number of his wives. A man with sixty wives is looked upon as a sort of bonanza king. His wives probably go out washing at 50 cents a day, or make shirts at 40 cents a dozen. In this country a man's wealth is judged by the number of dogs he owns. The possessor of eight dogs is generally too poor to pay school tax, and his wife takes in washing.—Drake's Magazine.

SHOOTING WILD GEESE.

The Inspiring Method of Pursuit Practiced by Dakota Hunters.

In Dakota there prevails among the natives a most inspiring method of pursuit. When at a distance you perceive a flock of geese garnering the golden grain in blissful unconsciousness of approaching evil, he tacks up toward them in a most unconscious and innocent sort of way, just as though he had some funny business to attend to in that particular field. The geese feed on unconsciously, doubtless connecting the approaching team with plows and oxen and farm work, to which they have long been accustomed. Finally when the team is nearly in range, they become somewhat suspicious, and prepare for flight, flapping their tails and stretching their necks toward the other. This is the vital moment. The jehu applies the whimble good, and the bronchos fly over the prairie with the wings of the lightning. The hunting wagon sails over the plowed ground, occasionally striking the solid ground to get a new start, while the hunters hang desperately on to the seats, and are filled to the eyes and ears with stubble, plowed ground and chaff. A goose, although generally keeping up with the intellectual procession upon such an occasion as this, is reduced to a lamentable state of desuetude. Filling the air with incoherent lamentations, they rush about hither and yon, undecided whether to fly or fall nobly in the breach. Now, a goose has to get a run to give it a start when it rises, and as it can only rise against the wind, if you approach on the leeward side, the goose is compelled to meet you half-way. Thus one has ample opportunity to ruffle the plumage of such a bird before it can get well out of range.—*Minneapolis Tribune.*

BULL FIGHTERS' WAGES.

Big Prices Paid in Spain for Exceedingly Dangerous Work.

I asked Senor Impressario if the present high prices were in part caused by the large pay now demanded by the bull fighters.

"Yes, but only in part," was his reply. "The fact is, that even among the lower classes in Spain men think nothing of saving a dollar on the week's or month's wages so as to be able to go to the ring even if wife and children are starving at home. The great bull-fighters certainly get higher remuneration nowadays than formerly, but their pretentions vary according to the season and to their list of engagements. The inevitable accidents that put one or more famous toreros hors du combat also tend to increase the demands of the others. The two best fighters in Madrid, Frascuelo and Lagartijo, when engaged for the season, get $1,125 for each performance and besides for an extra fee for each season of $1,200 in the form of perquisites. Out of this money they have to pay their two mounted picadores, who spear the bull, three banderilleros, who fix in its shoulders the light darts, and the puntillero, whose duty it is to dispatch the dying bull that refuses to rise on its legs to receive the death stroke.

"Famous bullfighters, like Mazzantini, the ex-station-master, Currito, Cara-ancha, favorites in Andalusia and Madrid, get from $900 to $4,000 only. At second-rate bullfights toreros only just rising into notice get from $250 to $500. There is that youngster, Guerrito, and Espartero, too, who are rapidly climbing the ladder, and in a very short time they will become famous and, alas! expensive."—*Madrid Letter.*

—"Can you bear a piece of bad news, Amelia?" hoarsely whispered the merchant to his wife. "What is it, Cyrus?" she exclaimed. "Don't keep me in suspense!" "I have made an assignment for the benefit of my creditors." "O, Cyrus. Then we'll have to give up this house, and the carriages, and the sealskin sacques I had ordered for the girls!" "Well, no, Amelia, its hardly so bad as that. But I think we'd better discharge the coachman on account of——" "But you've assigned for the benefit of the creditors. Won't they get every thing?" "Amelia, your ignorance of business it absolutely pathetic."—*Chicago Tribune.*

—A Man of Misfortune—Miss Gertie Sofsigh was going through the penitentiary with a party of visitors and had obtained permision to speak with one of the inmates. "Yes'm, hits werry 'ard," said he, "to 'ave the best days of yer life spent in a place like this, but Hi'm only one out of many unfortunits." "Poor man," said Gertie, "you must have gone through many trials during your life." Right for you, miss. As many as ten, but only seven of them turned out halibis."

—Honor among thieves received a new illustration a day or two ago. One of them, who was arrested after breaking into a house, admitted to the officer who arrested him that he had committed the deed and added: "After I came away I remembered that I had left the back door and gate open, and I had a good notion to go back and close them for fear somebody would get in. It worried me a good deal!"—*Philadelphia Ledger.*

—Since our last issue Colonel Fairbanks has had three rods of beautiful picket-fence erected in front of his abode, and the Gem saloon has received three barrels of whisky and a new pier-glass. We chronicle these improvements in no boastful spirit, but simply that outsiders may know that the spirit of progress is not dead within us. We are going right to the front as a town.—*Arizona Kicker, in Detroit Free Press.*

FACTS ABOUT SNAILS.

Their Great Nutritive Value and How to Cook Them.

Something like 90,000 pounds of snails are sent up daily to the Paris markets from the gardens of Potton, Burgundy, Champagne and Provence, where they are specially reared for the purpose, the natural delicate flavor of their flesh being improved by feeding them on beds of aromatic herbs. It is not merely, however, as a delicacy that snails are so generally appreciated in France. They also take very high rank as a nutritious food, and from the time of the ancient Romans downward have been regarded as excellent in consumption and "weakness" of the chest. According to Payne they contain seventy per cent. of water, sixteen per cent. of nitrogen, one per cent. of fat, two per cent. of salts and five per cent. of undetermined matter.

Dr. Ebrard, a French authority, who has made the snail his special study, declares that the weight of meat represented by the snails sold amounts to that found on cutting up a whole flock of calves and young heifers. He estimates the monthly consumption of snails in Paris at half a million. The market price of the great vineyard snails is from two francs fifty centimes to three francs fifty centimes per 100, while those from the hedges, woods and forests bring only two francs to two francs fifty centimes. The proprietor of one snailery in the vicinity of Dijon is said to net over 7,000 francs annually.

The snail is reared and fattened with great care in some cantons of Switzerland as an article of luxury and is exported in a pickled state. It is also eaten as a relish and nutritious article of food in Austria, Spain, Italy and in some sections of the United States. The Ashantees and other African tribes smoke them and eat them as daily food all the year round.

In Algeria in the markets large heaps of snails are sold by the bushel and the hundred as an article of food. Venders hawk them in the streets of Cairo. In modern Rome fresh-gathered snails are hawked by women from door to door, and the housewives serve them either boiled in their shells, or stewed or fried in oil. It is a common sight to see in an Italian city the people gathered around a number of baskets filled with snails, waiting for them to be thrown into a large iron pot suspended over a fire made between four stones. Herbs and love apples (tomatoes) are added, and when done the broth is retailed to the expectant bystanders. As the cook ladles out the savory concoction, she or he gives utterance to trade cries. Altogether the scene to an American is quite suggestive of the colored hawkers of "hot corn," "hot corn."—*Prof. Castegnier, in Medical Classics.*

A COLOSSAL FLOWER.

Description of a Recently Discovered Botanical Wonder.

In the farthest southeastern island of the Phillippine group, Mindanao, upon one of its mountains, Parag, in the neighborhood of the highest peak in the island, the volcano Apo, a party of botanical and ethnographical explorers found recently, at the height of 2,500 feet above the sea level, a colossal flower. The discoverer, Dr. Alexander Schadenberg, could scarcely believe his eyes when he saw amidst the low-growing bushes the immense buds of this flower, like gigantic brown cabbage heads. But he was still more astonished when he found a specimen in full bloom, a five-petaled flower, nearly a yard in diameter—as large as a carriage-wheel, in fact. This enormous blossom was borne on a sort of vine creeping on the ground. It was known by the native who accompanied Dr. Schadenberg, who called it Bo-o. The party had no scale by which the weight of the flower could be ascertained, but they improvised a swinging scale, using their boxes and specimens as weights. Weighing these when opportunity served, it was found that a single flower weighed over twenty-two pounds. It was impossible to transport the fresh flower, so the travelers photographed it, and dried a number of its leaves by the heat of a fire. Dr. Schadenberg then sent the photographs and dried specimens to the Royal Botanical gardens at Breslau, where the learned director immediately recognized it as a species of Rafflesia, a plant formerly discovered in Sumatra and named after the English Governor, Sir Stamford Raffles. The new flower was accordingly named Rafflesia Schadenbergia. The five petals of this immense flower are oval and creamy-white, and grow around a center filled with countless long violet-hued stamens, thicker and longer in the female, or fertile flowers, than in the infertile. The fertilization is accomplished by insects, whose larvæ breed in the decaying flesh of its thick petals. The fertile flower develops a soft, berry-like fruit, in which countless seeds are imbedded. The flower exhales a poisonous gas, even when first opened.—*Pittsburgh Bulletin.*

Worthy of the Prize.

One of the prizes for virtue given by the Paris Academy this year was awarded to Marguerite Pauline Rault, who was born near St. Brieuc, and was first a schoolmistress in Brittany. She came to Paris at the age of twenty in 1865 to watch over a younger sister, became a nurse, devoted eight years to the rescue of fallen women, and has since interested herself in gutter or mendicant children ill-treated by their parents. She teaches them to make umbrellas, and has sometimes to give money to the parents to save her charges from being taken back to hardship and cruelty.—*N. Y. Post.*

BOLD ROBIN HOOD.

A Merry English Outlaw Who Robbed the Rich and Fed the Poor.

To the reign of Henry II. belongs the life of our popular English ballad hero, Robin Hood, who was born at Locksley, in the county of Nottingham, about the year 1160. He was of noble birth, and his true name was Robert Fitzooth, said to have been corrupted into Robin Hood. Some German critics treat him as a nature myth, and find in the same Robin a form of Woden. For us let him be Robert. He may have had in the latter part of his life at least, some right to his reputed dignity of Earl of Huntington. Forfeiture of his inheritance, either by reason of the wildness of his youth or of injustice done, sent him to the old refuge of patriotic outlaws in the years following the conquest—to the woods, where in days of cruel and oppressive forest law men ate the king's game for their daily meat. His chief companions were Little John, whose surname is said to have been Nailor; William Scadlock, Scathlock or Scarlet; George a Green, the pinder (or pound keeper); Much, a miller's son; Friar Tuck, and Robin's sweetheart, the maid, Marian. He gathered a company of one hundred stout archers and ballad tradition always held that if he saw any stout fellow whom he desired for a comrade he fought him, took a cudgeling from him, and enlisted him after he had thus made proof of his strength. His forest domain was usually at Barnsdale, in Yorkshire, or in Sherwood forest; some say also at Plompton park, in Cumberland. He stole only from the rich, and fed the poor with the plunder of the abbotts, thus taking his own way of expressing popular resentment against the rapine of the flying calves and eagles figured in Walter Map's "Apoclalypse of Gollas." Said Robin Hood, according to the ballads of the people:

"These byshoppes and these archbyshoppes
Ye shall them bete and bynde."

He loathed especially the abbot of St. Mary's, York. English tradition has also painted Robert Hood as in the rough way of a rough time a religious outlaw. Friar Tuck was added to his company that he might not neglect the duties of religion, and there is a story told by Scottish Fordun in the fourteenth century—current, therefore, not long after Robin Hood's death, if not in his lifetime, and a part of the very first Robin Hood literature—that being surprised by the sheriff and his company in the thicket where he and his men were at mass, the greater number of Robin's men immediately fled, but he himself, with a very few, devoutly awaited the completion of the service, after which, by divine aid, they thrashed and spoiled the whole troop of king's officers. Again, the oldest of the Robin Hood ballads marks strongly the religious elements in the character of the English popular outlaw:

"A good manner than had Robyn
In lande where that he were,
Every daye or he woulde dyne
Three masses woulde he here.
* * * *
Robyn loved our dere lady
For doute of derely synne:
Wolde he never do company harme
That only woman was yune."

The knights themselves had not a better spirit of chivalry than this, through which the poetry of the people expressed what their priests had become active in teaching them, of homage to the virgin, their especial saint, type of God's love which medieval dogmas turned so much to watch that love required a separate embodiment.—*Treasure Trove.*

SMUGGLERS' DOGS.

How They Are Trained by the Excise-Law Breakers of France.

The smuggler trains his dogs one by one, and always at night. In the day time he walks across the frontier, accompanied by one of his pupils, and goes to visit his accomplice, in whose house he leaves the dog. It is detained till after dark, when it receives a sufficiently smart beating to make it glad to scamper home to its master, who welcomes it to an excellent supper. This routine is repeated several times, till the dog can find its way home on the darkest night without hesitation. It is then promoted to carrying a small light pack containing articles of trifling value, but by degrees the weight is increased till the dog is accustomed to carry many pounds. When each dog knows its duties thoroughly it is taught to work in company with others, the most intelligent in each pack being exempt from carrier service, and taught to act as scouts to ascertain the whereabouts of possible foes, and so enable the main body to avoid the danger of falling into ambush. The method of training the customs dogs is, of course, quite different. From their earliest puppyhood they are taught to play hide-and-seek with pieces of tobacco and small bags of coffee or rolls of lace. When six or eight months old, their education in these matters is taken seriously in hand, and they are taught to sit quietly in ambush, never barking, but merely giving a very low growl, or cocking their ears to attract the attention of their master whenever they detect any unusual sound. Should they be guilty of barking, they are, of course, punished, but a wise dog is rewarded with lumps of sugar. After some practice a well-trained excise dog will scent out even one solitary smuggler dog at a distance of two thousand yards, and he soon becomes wonderfully expert in tracking the law breakers, human or canine, and in giving notice of their approach.—*Blackwood's Magazine.*

—An electric current observed on a a telephone line running from Bridgewater, Nova Scotia, to the mines thirty miles away, is supposed to be produced by a "natural battery," formed by deposits of copper, silver, lead and iron ore in the vicinity of the gold mine.

The Topographical Instinct.

A deep thinking Scotch skipper, seeing a whale plowing its solitary way steadily south for hours, and not deviating a point from his course, said: "A whale will often leave the pack and set out all alone in search of warmer seas, as this one seems to have done. What guides them? Ah! now you block me, lad; but not only whales, even seals seem positively to carry a compass in their brains."

Many animals and birds possess a sense which enables them to find their way unerringly over sea or land, where there exists, so far as we can see, nothing to guide them. Dogs, cats, horses and birds have found their way back from great distances to their homes, although they have been conveyed from it in a way to deprive them of all assistance from the organs of sight.

The carrier pigeon, for instance, is carried hundreds of miles from its loft. It has traveled that distance in a basket under the seat of a railroad car; but when it is thrown up, it circles about for a few minutes, and then decides unhesitatingly on the exact line of flight which brings it to its loft, though it may never have been in the country before.

The explanation which says the bird has "the homing instinct" is as lame as that which ascribes to the bird the power of seeing its loft a hundred miles away; the Scotch skipper's is much better: the bird "carries a compass in its brains."

A writer in Leisure Hour says that a collie pup, 7 months old, was brought from Inverary to Aberdeen by rail, and from Aberdeen to Banchory by another railroad. The puppy ran away from Banchory and found its way back in a few days to Inverary, across a wooded, hilly country, with one river and several streams to get over.

The writer calls the sense by which animals are guided in finding their way the topographical instinct—which is a name, but not an explanation.—Youth's Companion.

Incongruities in Hair.

"Yes," said the hairdresser, as she pomaded and bandolined a sitter's hair, "we have some curious features in our business. For example, there's "the widow's lock."

"Is that a style of hair indigenous to widows?"

"It is supposed to predict widowhood. It is a lock that grows out straight at the parting of the hair and will not grow long enough to be combed back with the other hair. Then there is the cowlick."

"Is that another independent lock?"

"Yes; it grows straight up from the forehead like a tuft of grass, as if a cow had licked it up—and it is so stubborn that ladies afflicted with them often part their hair on the side to avoid them. They are a great trouble and no one knows why they have them."

The hairdresser took a roll of hairpins and put a dozen or so in her mouth.

"E-v'r h-e-a-r of l-ove locks?"

"No; that hairpin went right into my brain—what are they?"

"Love locks? Oh, they are not in fashion now. They were made by cutting a lock of the hair by the ear and letting it fall straight against the cheek for about an inch. Ever see white locks? I've seen a lock of hair as white as snow growing in the black hair of a young head; and it was as ugly and contrary as sin."—Detroit Free Press.

The Dummy Spoke.

"I was coming up from Albany a few days ago," said a drummer to a party of friends as they sat in the lobby of the Globe hotel smoking their cigars. "In the seat just in front of me were two well dressed gentlemen, who were carrying on an earnest but very quiet conversation with their fingers. When the train reached Utica a couple of stylish looking girls came in and took the seat in front of the two men, which happened to be turned facing them. The girls very soon noticed the finger conversation, and coolly proceeded to comment upon the personal appearance of the gentlemen in a very audible tone of voice. 'The fellow with the blonde mustache is pretty good looking,' said one. 'It's a pity he can't talk. I wonder if they're married,' and so they went on for a few minutes. Pretty soon the conductor came through the car, and, much to the surprise of the passengers, who had been watching the little scene, the gentleman with the blonde mustache stopped him and asked what time the train got to Syracuse. It was as good as a show to watch the faces of those girls. The strain was too much for them, and as soon as the train stopped they moved into another car."—Syracuse Herald.

Weakening Our Eyes.

I wish I could move out to Dakota, twenty miles from the nearest schoolhouse, and bring the children up myself. They would know a hawk from a hernshaw as far as any one. See those boys with big, handsome eyes going from school. Half can't sight a target or a duck in a marsh or a ship down the bay. If the country should have another war the government would have to find regiments in spectacles. Nine hours a day do those public school children pore over school books with the vilest print that ruins eyes. Between the poor print of school books and the newspapers, and incessant reading, we are losing eyes as fast as possible. The big, handsome eyed women have to use atropine to see at all, and the clever women all have contracted, sunken eyes from reading too much. They begin at 5 years old and keep tasking the eyes till the amaurosis sets in. Do you know there isn't one person in 500 with really good eyes, and fewer children?—Shirley Dare.

A Convict Cemetery.

A half mile east of the prison, upon a woody knoll, the convict burying ground is situated. It is an inclosure of about two acres, and the only resemblance the spot has to a "City of the Dead" is in the long rows of mounds that extend east and west, denoting the resting place of the unhonored dead. No stately monuments here, no marble shafts or broken columns erected by loving hands in memory of the departed; no beautiful flowers or grassy lawns, not even a respectable marble slab of any kind to recall the memory of the malefactors. All identity is lost. When the dead is buried here the grave is marked by a small pine board, on which is printed the prison number, name, age and date of death; the elements soon erase these, and in a short time no one can tell the occupants of these narrow homes.—Joliet Cor. St. Louis Post-Dispatch.

Only a Trifle.

Recent calculations go to show that the mean distance of the earth from the sun was wrongly estimated by 130,000 English miles about twenty years ago. But nobody minds a little thing like that in view of the fact that the distance is now figured to be 92,385,000 miles.

INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PRO IETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY MARCH 9.....1889

A MONSTIOUS MISAPPREHENSION.

[Los Angeles HERALD.]

The industrious belittling of this section which has been the fashion with the press and people of the northern and central counties, has undoubtedly had some effect. A case in point was developed yesterday. For some time past Mr. Mulholland, of Inyo county, has been in Los Angeles in the interest of establishing trade relations between his home and the people of Los Angeles, and stimulating the building of a railroad to Mojave. Mr. Mulholland has put in a great deal of earnest work in this line, and has encountered some difficulties which were altogether due to the misapprehension to which we allude. One capitalist, of the millionaire order, declined to have anything to do with an enterprise which was to lead to a "busted" town, that has a delinquent tax list so large as ours, and where half the people were out of employment. This gentleman would be somewhat astonished were he to visit Los Angeles and note the fact that more building is going on here than in Oakland, Sacramento and San Jose put together. His astonishment would not be diminished when he should find out that of a million and a half dollars of taxes imposed this year, only $10,000 was allowed to go delinquent. It is true that Los Angeles had a very large published delinquent list, but its voluminousness was entirely owing to the fact that the people, under the present clumsy system, had such poor facilities for paying their taxes that they were perforce obliged to allow them to go delinquent. The throng at the Tax-Collector's office for the month past has been almost prohibitive of a busy man paying his taxes. The delinquent tax sale was to have taken place on Tuesday, the 26th day of February; but by the authority vested in him, the Tax-Collector, it was adjourned till the following day, by which time only $10,000 was delinquent. Los Angeles is a large county, covering a superficial area of nearly four million acres, with a population of probably 165,000 souls, many of whom live at a distance from the city. These people are obliged to come to the county seat to pay their taxes, and to keep a weather eye on their trains. The assessment lists, besides are in such a muddle that many persons voluntarily allowed their taxes to be published as delinquent in order to be able to learn what they were. The system needs an entire remodeling, and Deputy Tax-Collectors should be stationed at such points as Pomona, Wilmington, Pasadena and Santa Ana during tax paying times, to facilitate the tax paying. The crucial point is not what was advertised as delinquent through a defective system, but what actually turned out in the end to be delinquent, and this sum, as we have stated, was petty in the extreme, amounting to only a hundred-and-fortieth part of the sum total.

The number of working men out of employment here has been grossly exaggerated. It is not a whit more in proportion than in San Francisco, and we doubt if it is as much. It is only natural that this should be the case in view of the fact that there has been more building in Los Angeles during the past two years than in Oakland, Sacramento, and San Jose put together. This was necessary to accommodate the phenominal immigration which here during that period. Of course it was not expected that this would would keep up at such an unheard of rate. Public and other improvements are under way here, which will assure laborers and others steady and profitable employment. If Mr. Mulholland's correspondent were to come to Los Angeles he would find as much business activity here as in any city or town in California, and persons who have been extensively over the State recently tell us there is more.

This gentleman would be still more surprised to find a cable railway under way, in which wide-awake Chicago capitalists are putting $2,500,000. Many enterprisee are being pushed ahead; and, although there is no parade made about it, our enterprises are making very gratifying headway. He would discover besides that, far and near, throughout all the country tributary to Los Angeles, the work of development and production is being pushed with an energy and persistence never known in our history before. There is more intelligent, downright and virtuous enterprise to the fore in Southern California to-day, and that at a ratio of ten to one, than was ever displayed at the height of the boom, and this remark holds good about Los Angeles, Kern, Ventura, San Bernardino and San Diego counties. Go where one will, orange groves and vineyards are being planted, ground is being broken up that never knew a plow before, ditches and flumes are being built all over the Southern country, and hundreds of miles of cement and iron pipe are being laid down—we had almost said monthly. If we had said so it would not be much of an exaggeration.

If the capitalist whose remarks we have made the text of our article would come here in person he would very quickly change his ideas as to the most progressive region in all lines of development to be found on either the Pacific or Atlantic Coast.

MICKEY FINN'S BASS.

"Mickey, hav' ye th' wurrums?" said Mr. Finn.

"I hav' a tomaty can full of wurrums an' four big grasshoppers in a bottle, an' tin grubs that I found in a rottin' boord, an' sivin crickets an' two cockroaches as black as coal an' as big as your thumb, an' a bumble bee—shure I pulled out his stinger with th' tweezers"——

"Ah, hoult on, sonny. Faix ye hav' enough of bait t' catch all th' fish in Jacob's Valley. Bring all them things in here till we have a look at them."

When Mickey had brought all his bottles and boxes into the kitchen and placed them on the table they presented quite a formidable array. The crickets were confined in a cigar box, and when he lifted the lid to permit his father to have a glance at the bait, the crickets jumped out upon the floor, and the tame crow showed a liking for crickets which it never before had exhibited. The worms proved to be of the night walker order. Mickey had caught them by the aid of a lantern as they crawled through the grass of Stumpy field the previous evening. The bumblebee escaped when little Mike took the cork out of the bottle, and flew away to the clover field near by. Said Mr. Finn:

"Ye may as well pull up one o' thim bane poles in the yard an' fasten yer line to it, an' so ye'll be ready for th' mornin', for we'll be startin' again th' toime th' sun is up."

Early next morning, while yet the grass was diamonded with dew, little Mike and his father started up the Old Point road. Mickey was heavily freighted. He carried on one arm a large market basket, which contained two cigar boxes and various bottles, containing bait, both solid and liquid. The latter was for his father's exclusive use. One of the cigar boxes was filled with a varied assortment of fishing tackle, including a number of rusty screws for sinkers, codfish hooks stuck into a cork, an old chalk line, five soda water bottle corks and a number of other articles which the boy in his ignorance deemed necessary for fishing in a country brook.

After leaving the Old Point road the way led down a little lane where a brown thrush sang a solo in a tree and a golden oriole flitted across the lane and uttered liquid notes. Under the tree where the oriole sang in a field filled with cocks of new mown hay there bubbled a little spring. The water came up through the sand at the bottom of the spring and shifted it like drops of quicksilver. Lying down at full length the fishermen put their mouths down to this living spring and drank deep draughts. 'Twas nature's own champagne. There was life in the water. The sun had kissed the spring and the sweet scent of hay stole into it. Somehow Mickey didn't appreciate the water as much as his father did. He said he would rather have a glass of root beer any time.

When the brook was reached the sun had gained its meridian, but its rays could not penetrate the dense foliage on the banks overlooking the water. In these cool pools swam sunfish with golden scales, and brook bass which resembled bars of burnished silver as they flashed their gleaming sides in the sunlight. Mickey was so eager to drop the line in the water that he could scarcely put a worm on his hook. At last the tackle was all ready, when a six inch trout, looking almost translucent in the clear water, came swimming up the stream. It stopped almost opposite where the boy stood, lazily fanning its dorsal and ventral fins. Said Mickey, with parted lips and bated breath:

"Keep still, dad! Wait till you see me haul 'im out!"

Slowly the hook sank beneath the surface, and the worm in all its squirming, juicy plumpness rested on the sand before the nose of the trout. The two held their breath and awaited developments. The trout slowly backed away from the worm for a distance of one foot, then it moved forward and smelt of the bait. There was a moment of intense suspense, and Mickey's pole shook as though it had the palsy. Then the trout darted like a beam of sunshine into a shadowy place beneath the bank. Mickey's disappointment was great, but he choked it down, and said with almost a sob in his voice:

"Dad, I almost had 'im!"

"Yes," replied his father; "but you didn't have any salt on his tail that time, me lad; thry agin."

Then Mickey's father lay down upon the grass on the banks of the stream and went to sleep. He had just entered the borders of dreamland when he was awakened by a shout which echoed like a fire alarm in the valley. He sat up and listened. Again he heard the shout and distinguished these words:

"Dad, I got a bite!"

Mickey's father plunged into the underbrush and forced his way through the overhanging branches of the trees to the place where the sound came from. He had not gone twenty feet, however, before a cry so jubilant, so full of triumph, so instinct with the passion of possession, came to him that he knew at once something important had occurred. Looking through the aisles of the wood he saw Mickey lying upon the trunk of a big tree which projected out over the stream. In order to maintain his position he had to hang on with one hand and with the other he held his rod. Again he cried in agitated tones:

"Golly, dad, my dobber's under."

"Pull up, sonny! Pull up!"

Mickey did pull up, and dangling from the end of his line was a brook bass about five inches long. But Mickey was in such a position that he could not land his fish. And so he hugged the tree and palpitated and perspired and managed to lift the fish just so far out of the water that its tail touched the swirling current.

The picture was such a pleasing one to Mickey's father that he stood hidden by the foliage and watched his boy's dilemma for at least two minutes before he went to the rescue. Then he slid down the bank and held Mickey so that he could land the fish himself, which was accomplished in a very careful manner for fear that it might escape. But when it lay upon the grass and gasped for its native element there was no touch of pity in Mickey's heart; only a look of triumph in his eyes, only an itching of the fingers until he could clasp his prize. For fear that the fish might get away Mickey put it in his trousers pocket, where it remained securely for five hours.

What a day that was! crammed full of joy. In the afternoon, when the sun shone down upon the meadow with its fervent heat, Mickey made several excursions after grasshoppers, for he found that the fish refused to take worms, and his grubs had long since been exhausted. Mr. Finn did not fish himself, but sat upon the bank of the stream smoking his pipe and contemplating the beauties of nature. He also gave expression during the day to several philosophic reflections, such as, "Musha, if I had all th' ground I could see wid me two eyes, divil a shovel would I handle, an' we'd kape a cow!"

Just as the twilight was coming on little Mike landed an eel as large as a lead pencil. He insisted on taking it home in spite of his father's protests. When they left the stream the total catch for the day amounted to one five inch brook bass, one small eel and a little mud turtle, which Mickey intended to add to his menagerie. He said he had hopes of "Tachin' th' mud turkle to do thricks."

When they arrived at home the brook bass was taken from Mickey's pocket. The scales were baked upon it. But under his mother's skillful direction, and with the help of his father's old razor, the scales were removed from the fish upon the washstand in the back yard. After the head had been removed and the tail cut off very little of the fish remained. But Mrs. Finn said she didn't care for fish, and so she prepared the frying pan to receive what was left of the brook bass for her son.

In the meantime the billy goat had been wandering around the back yard in an inquisitive way. As this animal had never shown any desire for fish, Mickey paid no attention to the goat. The fish lay upon a plate near to the kitchen door, and little Mike stepped inside to get some salt with which to sprinkle the toothsome delicacy. When he came out with the salt cellar in his hand the fish was gone. The plate remained, however, and little Mike looked under the bench and peered around the corner of the shanty.

Then he went inside and asked his mother if she had seen anything of the fish. Mrs. Finn replied that she had not, and her motherly soul yearned over the boy as she saw the tears in his eyes. Then a thought suddenly came to Mrs. Finn. Leading her son to the door she pointed with the index finger of her right hand to the billy goat, who was quietly assimilating an imitation tomato from the outside of a tomato can. Leaning over her boy she whispered in his ear:

'Me darlint, if ye'll git th' ax an split open that billy ye'll find your little fish inside iv him. Th' baste!"—Evening Sun.

Editor Dana in His Office.

The editor's work day begins about 11 o'clock. His routine does not differ greatly from that of any other New York editor in chief, except that he has, perhaps, a more close supervision of his editorial page. It is very seldom that anything is printed there which he does not first carefully read. He is also a careful reader of newspapers, and he clips a great deal of the miscellany that is used in the Sun. He does not write much with his pen, but dictates editorials to his stenographer. Although he does not leave the office before 5 o'clock, he is not now a hard worker. He is systematic and accomplishes a great deal, but it is not a "grind." His workshop is on the northwest corner of the building, on the third floor. One enters it after passing across one corner of the "city room"—where reporters and editors are assembled in a rather miscellaneous manner — thence through the library, and so into the presence of "the chief," as the boys call him. His room is not large and certainly not luxurious. Aside from its occupant, the first thing which will attract the visitor's notice is the famous owl, which perches upon a high revolving book case facing the door. Hon. Thomas C. Acton is the owner of the owl. In the middle of the room is a large desk, and in one corner is a small round table where Mr. Dana sits. It is regarded as an evidence of the eccentricity which people are bound to credit him with, that Mr. Dana leaves his nice large desk and sits at the little round table, but as a matter of fact it is a simple question of light. Mr. Dana's eyes have never been strong, and he can see much better in this corner near the window than in the middle of the room. The big desk is too large to go into the corner. A large portrait of Marshall O. Roberts hangs above the table. There are also in the sanctum an engraving of Abraham Lincoln, a picture of Judge Samuel Blatchford, a medallion of Ben Butler and a fine photograph of Horace Greeley. It is said that this photograph was "stolen," or, in other words, that the camera was trained upon Mr. Greeley in an unguarded moment. At any rate, it represents him in an attitude of deep abstraction, with his overcoat collar turned inward. There is a veined white marble mantelpiece in the room which is loaded with bric-a-brac, including some curious old candlesticks. There are also three chairs, a lounge and another table.

Mr. Dana receives callers pleasantly, if he receives them at all. Probably he is no more inaccessible than other men in his position. Certainly a vast and incongruous multitude come to see him in the course of a year.—New York Letter.

An Interesting Question.

I have noticed that there is a difference in the bearing of people in general in the different seasons of the year. There are men who walk erectly and who hold their heads high in the winter. Take these same men in the summer, and there is a very perceptible droop to their shoulders and an inclination of the head forward. In the winter this defect in their carriage will have been remedied, and they will walk as straight as ever. I have studied the matter with much interest, but whether it is due to a general loss of stamina from the system, by reason of the heat, or whether it is a natural instinct of the man to protect himself, his face and eyes, by leaning forward, I have not determined. It may be due to both causes, or may not be causes at all. At the least it is an interesting question.—William McNamee in Globe-Democrat.

A Professional Opinion.

Young Mother (whose baby has been weighed by the butcher)—And how much does the little fellow weigh, Mr. Bullwinkle?

Butcher—Twenty pounds, mum.

Young Mother—Isn't he a splendid specimen?

Butcher (dubiously)—Well, from my p'int of view, mum, he runs too much to suet.—New York World.

CITY WINDOWS.

Through many an evening, while my spirit gains,
Amid the populous city's ebb and flow,
A keener sense of solitude than they know
Who dwell on desolate hills or houseless plains,
I roam long streets where dubious dimness reigns,
Where bright inscrutable windows calmly glow,
And with mysterious pleasure, as I go,
Shape wierd conjecture from the illumined panes!
In yonder room two amorous hearts may thrill;
Some fiery quarrel here may grow apace;
There may some vigilant mother, pale and still,
Bend in deep agony o'er a wasted face;
And here a murd'ress by some bed may spill
The deadly colorless drop that leaves no trace

SATURDAY, MARCH 9 1889

MARRIED.

HAMPTON—HUNGER—At Placerville, February 20, 1889, William A. Hampton and Mary Hunger.

MEIERS—SAYLOR—In San Francisco, February 23, 1889, Mr. Gus. H. Meiers, of San Francisco, and Miss Rose E. Saylor, of Big Pine.

BORN.

HARTSHORNE—At Bishop, February 22, 1889 to Mr. and Mrs. H. C. Hartshorne, a son.

DIED.

FLOWERS—At Seaford, Delaware, March 5, 1889, Mrs. M. Flowers.

--Mrs. Flowers was the mother of Mrs. O. I Mairs and Mrs. H. E. Jiggens, of Independence.

Bar silver is quoted at 93¼.

M. W. Trask has been in town during the week.

Messrs. T. C. Boland and Dave Holland were in town on Wednesday.

There will be a grand Odd Fellows' celebration at Independence on the 26th of April.

See the notice for plans and specifications for a bridge at Big Pine published this week.

There has been considerable wind from the south during the past few days but no rain as yet.

There must be some fatality in road carts, there being two smash-ups in the last day or two.

Mr. F. D. Hobbs, of Washington, is inspecting the U. S. Land Office here. He arrived last Monday.

Mr. R. Hessian, of Big Pine, and his daughter, Mrs. Mary Tynan, were at Independence last Tuesday.

Geo. M. Gill has been commissioned as a Notary Public by the Governor and has qualified for the position.

Mr. John Lucas, of Lone Pine, has gone to Mojave to meet a brother whom he has not seen for many years.

H. M. Yerington is expected to be in Los Angeles on Monday in response to an invitation from the Chamber of Commerce of that place.

A very pleasant birthday social was enjoyed at the residence of Mr. and Mrs. Jacob Vagt, at Camp Independence, last Monday evening.

The citizens of Fish Springs school district will soon vote upon the question of raising money by taxation for the purpose of building and furnishing a school house there

A large attendance will be present at the St. Patrick's Day ball at Keeler one week from Monday. The best of music is secured and the kindness of Mr. and Mrs. Barnes on previous occasions will not be forgotten.

The Salt Lake and Los Angeles railroad is now a certainty. Large subscriptions are being made daily to complete the enterprise. This route will develop valuable mines in the Death Valley and Panamint region.

Under an apple tree they sat;
He held her hand, she held his hat,
I held my breath and lay quite flat—
They kissed, I saw them do it.

He held that kissing was no crime,
She held her head up every time,
I held my peace and wrote this rhyme—
They never knew I knew it.

Messrs. C. S. Compton and W. H. Best arrived at Independence yesterday. The young men represent a number of people near Los Angeles who desire to secure homes and will remain here about a month looking over the country. They had a rough time getting here, coming through the Cajon Pass, Death Valley and Darwin. They will return by way of Mojave.

A copy of the petition for a daily mail from Mojave to Bishop was sent to Mr. C. Mulholland, at Los Angeles, with the request that he take necessary measures to procure signatures. Mr. Mulholland writes that he has interested the Chamber of Commerce in the matter. The members of that body are circulating the petition and it is being largely signed by the business men of Los Angeles.

The latest news in regard to Cabinet appointments is as follows: Secretary of State, Blaine of Maine; Secretary of the Treasury, Windom of Minnesota; Secretary of War, Proctor of Vermont; Secretary of the Navy, Tracy of New York; Postmaster General, Wanamaker of Pennsylvania; Secretary of the Interior, Noble of Missouri; Attorney-General, Miller of Indiana; Furnass of Nebraska will probably be Secretary of Agriculture.

Messrs. Jiggens and Swan got back last Monday from their second trip with the prairie schooner. Rudolph Schober and Frank Inman are on their way to Mojave with a big team, going after freight for merchants at Bishop. The goods will be purchased at Los Angeles. John Barlow and William McDonald, of Big Pine, have also gone to Mojave and will bring freight for Thomas & Hill. They took out a load of hides. There are now three large teams on the road and a fourth will soon start from Lone Pine.

Messrs. Partridge and Anger received their artesian well-boring plant last Monday. The first experiment will be made on their land location about five miles north of Independence. Should water not be found there other borings will be made in various parts of the valley and a thorough practical test made. The moment a good flowing well is struck an era of great future prosperity will dawn for the county; but success or failure, Messrs. Partridge and Anger are deserving of great credit for their enterprise.

Tourists

Whether on pleasure bent or business, should take on every trip a bottle of Syrup of Figs, as it acts most pleasantly and effectually on the kidneys, liver and bowels, preventing fevers, headaches, and other forms of sickness. For sale in 50c and $1.00 bottles by all leading druggists.

COURT NOTES.

In the case of The People vs. S. A. Middleton the taking of testimony for the prosecution commenced on Friday morning. The following witnesses were examined and cross-examined: John Blair, William Rowan, Dr. W. H. George, James Hutchings, Nick Rokeay, Martin Uren, H. G. Plumley and J. H. Stoutenborough. The prosecution closed on Saturday afternoon and the defence commenced their case. James Mullen, J. T. Middleton, D. D. Lahey, J. C. Mills, J. Hukill, D. Hukill, Jasper Williams and the Defendant gave in their testimony. The prosecution introduced William Rowan, John Blair, J. C. Mills and J. H. Stoutenborough to give evidence in rebuttal. After argument by counsel the case was given to the jury at half-past five o'clock on Monday and after discussing the matter about three hours the jury concluded that a conviction could not be secured on the evidence and accordingly returned a verdict of "Not Guilty" and were discharged. The entire cost to the county of this case was about four hundred and seventy-five dollars.

H. O. Hartshorne has applied for letters of administration on the estate of Henry J. Hartshorne, deceased.

The case of Munzinger vs. Munzinger will come up for trial next Tuesday.

Communicated.

The following is an extract from a letter written to M. A. Newmark & Co., of Los Angeles, in reply to a letter sent out by them asking for trade.

LONE PINE, March, 6, 1889.

MESSRS. M. A. NEWMARK & CO.:—

Gentlemen:—* * * The first point to be considered by me in answer to your request, is to express my views earnestly, without any consideration for what has been said and published, or what will be said or published, but to give you, gentlemen, a sincere and honest answer, without regard to please or displease others having conflicting views in the matter.

First. I agree with Mr. C. Mulholland and your own views, gentlemen, in regard to having a direct business connection in drawing the trade of Inyo county to Los Angeles, which would positively be of great benefit to both places.

Second. Now we come in contact with the most important points to be considered: How can we divert the entire trade of Inyo county to Los Angeles? Can it be done? I say, yes. How? By a direct standard gauge railroad from Mojave to Bishop Creek, Inyo county. Is there any hope that the investment of the capital required will pay a fair rate of interest immediately? No. In the near future? Yes. Explain how: Your correspondent is over 63 years of age; has seen many European and American countries and is of the opinion that nature has favored Inyo county with the most healthful climate and agreeable temperature he has ever seen. And as soon as a railroad shall be in the course of construction from Mojave to Inyo county there will be in each place and town in Owens Valley an incorporated company for the construction of reservoirs on every creek to store the waters of the snows, springs and lakes of the Sierra Nevada mountains, which shall be sufficient to irrigate all the land in the valley and transform the uncultivated lands into a state of production; and the population will increase in the same ratio as the cultivated land will, and then a good interest on the money invested in the building of the railroad, as well as for the building of the reservoirs to store the waters, will be certain. Why are not those proposed companies incorporated to store the water and cultivate the land first? Because in this case the railroad is the propeller and the proposed companies are the dependents. It is an impossibility to develop our rich mines, which are innumerable from one end of the country to the other; and the farming industry is entirely limited to the product of the home market on account of the present high rate of freight paid for transportation, either by the C. & C. or by the teams to Mojave, and that high freight is keeping the entire agricultural product of the Valley out of competition with the balance of the world, therefore cannot be exported until a lower rate of freight shall be established, and to come to that end the building of the aforesaid railroad from here to Los Angeles via Mojave is the only motor that will solve the problem, and then the whole of our trade, exports and imports, will go to and from Los Angeles.

Very Respectfully Yours,
C. MEYSAN.

An Experiment

This office is indebted to Captain J. M. Keeler for a very pleasant call made during the week. The Captain is President of the Inyo Marble Company, of Swansea. In conversation he explained an experiment that was made at the quarry recently. Some very large blocks of marble had been uncovered and it was desired to split them for transportation. The old way, by means of wedges and feathers, is very tedious and it was resolved to see if could not be done more expeditiously. A hole was made on the desired dividing line with a circular drill about half way through the block; a diamoned shaped cut was then made on opposite sides of the hole, on the dividing line. A blast of powder was then poured into the hole loosely and fuse inserted; a piece of wadding was then forced into the hole about a foot, leaving a considerable air space between that and the powder, and tamping placed on top of it. On firing the blast the marble block was divided as neatly as could be desired. As an experiment the attempt was quite successful. Mr. Keeler stated that in all probability considerable Inyo marble would be used in the construction of De Young's new building in San Francisco. It is intended to ship some twenty-ton blocks to San Francisco as an exhibit, and every effort will be made to bring this marble into the prominence which it deserves. New tracks are being built at the quarry to facilitate handling. When railroad connection shall be established with Los Angeles a great demand will spring up for Inyo marble. As a building stone it is unsurpassed, the elements having less effect on it than on any other marble.

The Sheep Ordinance.

ASSEMBLY CHAMBER,
SACRAMENTO, Cal.
February 19, 1889

P. H. MACK, Esq., County, Clerk, Inyo County, Cal: *Dear Sir:*—The Resolutions passed by your Board of Supervisors protesting against a change in the license law received. I will present the same as requested. This is the great fight the mountain counties have in the Legislature. All the millionaire sheep men in the State have been working with the members to destroy the power in the Board to levy a stock license. I am working night and day to prevent this, as all my counties are more interested in this matter than in any other legislation. We will be able to keep the law as it now stands unless the sheep men use money, which we all fear. They have a regular organization and can readily raise money, while we of the mountains cannot. I will send you two volumes of State Engineer Hall's Report for the use of Inyo county, by express. I think you will find the report useful. Yours Respectfully,

CYRUS COLEMAN.

Meteorological Summary for February, 1889
Keeler, Cal.

Mean reduced barometer....30.056 inches.
Mean temperature .....47°
Highest temperature.....72°
Lowest temperature.....21°

Private, Signal Corps.

Church Notice

Rev. Geo. W. De La Matyr, Superintendent of the Nevada Mission of the M. E. Church, makes his first visit to the Independence Circuit this week. He will conduct Quarterly meeting at Lone Pine on Sunday morning. Love feast at 9:30; preaching at 10:30; the Sacrament of the Lord's Suppe at the close. Mr. De La Matyr will also preach at Independence on Sunday evening at 7 o'clock. Collections at these services are to meet the claim of the Presiding Elder.

Signed.

The Governor has signed the bill providing for a survey and correction of the Eastern boundary line of California. This has been Alpine's hobby for the past fifteen years, that county hoping to add several fine ranches that are now claimed by Nevada. A new line may throw a portion of Henry Williams' Sweetwater ranch into Mono county, and that would please him, as the taxes in Nevada are fearfully high. *Chronicle-Union.*

NEW ADVERTISEMENTS.

Election Notice.

SCHOOL TAX

NOTICE IS HEREBY GIVEN TO THE qualified electors of Fish Springs School District, County of Inyo, State of California, that an election will be held on the 30th day of March, A. D. 1889, at which will be submitted the question of voting a tax to build and furnish a school house, and for incidental expenses. It will be necessary to raise for this purpose the sum of $400. The polls will be open at the building occupied as a school house from one hour after sunrise till sunset. The Judges appointed to conduct the election are O. H. P. Love, James Lane and James McCarty.

ALLEN GRAY;

— OR, —

The Mys'ery of Tur'ey's Point.

Being a Few Romantic Chapters From the Life of a Country Editor.

BY JOHN R. MUSICK.

AUTHOR OF "WALTER BROWNFIELD," "HELEN LAKEMAN," "BANKER OF BEDFORD," AND OTHER STORIES.

[*Copyrighted, 1888, by the A. N. Kellogg News paper Company.*]

CHAPTER I.

THE FIRST ISSUE.

IN the midst of those verdure-crowned hills on the banks of the Missouri, nestling among the dales and forests, like a timid thing wishing to hide from the busy world, is a small village, which, for sake of convenience, we will call Turley's Point. It is a river town, and yet the river can scarce be seen from its streets; and many times the boats which still occasionally plow that muddy stream pass by without catching a glimpse of the dull, sleepy little hamlet. The town is in a valley, or rather lap of land, among high hills, with just a narrow, oblique opening between two ridges, revealing the broad bosom of the river to view, and is one of the quietest places in the whole world. A small brook glides by the village, with just murmur enough to lull one to repose; and from the streets the notes of the quail can be heard, accompanied by the tapping of the woodpecker, just as they were a century before the foot of the white man trod their sacred haunts.

Turley's Point was in a state of helpless decay. Long before the days of railroads, it, being a steamboat landing, seemed to evince some signs of prosperity, and had grown and thrived, but when the railway began to usurp and absorb river navigation, Bentonville, a rival town eight or ten miles below, having secured one of these modern highways of traffic, began at once to prosper at the expense and detriment of Turley's Point. Men having business interests at the latter place adopted various means to rouse the drooping energies of the Point, but their most herculean efforts could not generate even an embryotic boom. Slowly but surely it was going down, and unless something was done to revive its business interests it was only a question of time when the village would be entirely deserted.

"We must advertise, we must advertise," Tom Simmons, an ambitious politician and property owner, often declared. The question of advertising was given serious consideration by the leading citizens of this moribund village. After mature deliberation, it was decided that Turley's Point must have a weekly newspaper, which was to be a rival of the Bentonville *Gazette*. Tom Simmons was appointed one of a committee of five to find a suitable person to manage such an institution, and in a few weeks reported that by making some donations to the enterprise, they could secure a young man with some experience and capital, who was willing to undertake the precarious business of establishing a paper at Turley's Point.

Early one summer morning one of those lonely steamers, which still occasionally wander up the Missouri, like the ghost of its former glory, sounded the whistle and rang the bell when opposite the Point, and gracefully swung into the landing. The stage-plank was thrown out, and a young man about four and twenty years of age walked ashore. It was Mr. Allen Gray, the prospective editor of the new paper. It was not for lack of home talent that an editor had been imported to Turley's Point. The village was not without its literary aspirants. There was Toney Barnes, the poet, and Miss Leethy Hopkins, the poetess, essayist, novelist and general "literarian," and many others capable of managing a weekly newspaper; but as neither of these persons possessed the required capital, it was necessary to find some one that did.

Allen Gray had completed his education, and had had some experience as a newspaper man. At the time he came in contact with Tom Simmons he was looking about for a suitable location to publish a weekly newspaper. This was his first visit to Turley's Point, and he was bringing his press, cases, chaises, rules, fonts of type and all the manifold paraphernalia of a country printing office with him. Tom Simmons was at the landing to meet the new editor, who was to revive Turley's Point and bring back its pristine glory. While the steamboat hands were carrying the presses, fonts of type and boxes ashore Tom had taken the new editor's arm and was conducting him up the ascent to the village, all the while commenting on the golden opportunities that awaited the new enterprise.

To Allen the prospect seemed any thing but encouraging; but he was young and full of hope, and determined to make a vigorous battle for a position in the Western world.

"This is your office," said the voluable Mr. Simmons, as they passed in front of an old, dilapidated building, which had at one time been used as a general store. "There is plenty of room here for your presses and every thing. This is the best we can do now, but when your business grows, you know, we can build an office to suit it."

By this time the news had spread all over the village that the new editor had arrived, and the little town, for the first time in years, took on something like excitement. Toney Barnes hastened to the building which was to be the newspaper office, for an introduction, and as soon as it was possible for him to do so, secretly informed the new publisher that he was a poet, and would have one of his effusions in the very first issue of the new paper. Allen hadn't been long enough in the newspaper business to feel the thrill of horror which an older editor would at coming in contact with a local poet. Then Miss Leethy Hopkins, the ancient maiden, was next to seek an introduction, and astound the new publisher with the fact that she was a versatile writer. She wrote stories, "poems in rhyme or blank verse," tragedies, comedies, essays, and, in fact, every thing from an epic to a humorous paragraph. Miss Hopkins devoted her leisure hours, when not engaged in literary work, to teaching the village school. She was tall and slender, her nose was on the Hebraic plan, her small eyes seemed to glare triumphantly through her glasses, as she astounded the new editor with her multifarious accomplishments.

Nothing could be done that day except get the press and material into the building, which was to serve as office, press-room, composing-room and general storage and mailing-room. A table at the front entrance was to serve as the editor's desk, and he had three chairs and one bench donated him by the good citizens. That afternoon several of those persons who had donated sums to the new enterprise met the editor in his office to discuss the future of the proposed publication.

"The first thing to be decided on is a name," said Tom Simmons, familiarly seating himself on the table.

"I have a name to propose," said Toney. "Call it the *Rainbow*."

Though he tried to gravely consider all advice, the new proprietor smiled. The name would certainly not be a telling one, but Tom Simmons, who had political ambitions, said:

"That won't do, Toney; let's call it Turley's Point *Republican*."

"No, no," interposed Mr. Strong, another capitalist, who had donated fifteen dollars to the concern; "that'll not do at all. Better not giv' it a name that 'ud indicate a political paper. This is to be an independent organ, fur the upbuildin' o' Turley's Pint, an' we must be very keerful what name we giv' it."

"What'd you suggest, George?" asked Simmons.

"The *Star* o' Turley's Pint."

"Or the Turley's Point '*Star*' would be more euphonious," put in the poet.

"Neither of those are suitable," said the new publisher.

"Call it Turley's Point *Express* then," suggested Strong.

Objections, however, were found to that. Then Mr. Simmons, whose ambition soared out beyond the narrow confines of Turley's Point, suggested that some broader name be chosen.

"Don't have Turley's Point in it at all," he said. "Call it by some name that will go out all over the West, and bring in glory to Turley's Point."

This seemed sensible, and a hundred inapplicable titles were at once suggested, but almost instantly discarded. At last the new editor was appealed to as the proper person to name the paper, it being his own.

"If you want a general name, one euphonious, and at the same time dignified and sweeping, call it the '*Western Republic*,'" he said.

The name seemed to suit every one. Toney Barnes thought it sufficiently poetic; Miss Hopkins, who was present, declared it romantic. It was sufficiently broad for the expanding ambition of Mr. Simmons, and practical enough to suit the capitalist Strong, therefore the *Western Republic* was agreed upon. Allen selected from the large display wood type on hand the heading. With the aid of the foreman, Ike Hatchett, and printers' devil, Toby Smith, he proceeded to put the office in shape. The villagers crowded in the room and about the windows to gaze in astonishment at the imposing stones, the cases, fonts of type, hand-press and "jobber," wondering when was "gom" to be done with all them things."

Next day every thing was in shape ready for business. The editor had clipped some appropriate articles from the few exchanges which he had induced the publishers to send him in advance, and the foreman was putting them in type. Toby, the apprentice, was standing on a box in order to be high enough to reach the case, with a stick in his hand, trying to acquire the art of putting type into it. He was putting the letters up side down, the lower ends of the type out, making spaces with em quads, in fact doing all sorts of odd things which only a beginner at printing can. Allen Gray was writing his salutatory, a task not so easy as some may imagine. The manner in which a new editor introduces himself to the public is very important. If he pleases public fancy, success is assured; but if he fails to do this, he might have to struggle for weeks to overcome the bad impression his introduction to the public made.

The opening address is always read with a great deal of care. In it the editor makes his pledges to his readers, and the average reader seems more anxious to know what those pledges are than to see that they are kept.

"Well, you've got started," said Mr. Simmons, entering the office just as the new editor had his delicate task fairly under way. "I just dropped in here because I knew you were alone, and thought it would be well to give you a little advice. I know more about this place than you do, by a blamed sight. That's all flummy-diddle what Strong said yesterday against this been' a political paper. The Republicans have a majority in this county, and Strong knows it, but he's a Democrat and can well afford to say the paper shouldn't be political. Pitch right into politics, say I. An' now while I'm on this pint, Mr. Gray, I've got a secret to tell ye—though ye must keep it to yerself."

"What is it?"

"I'm goin' to run for the Legislature next election, and o' course I expect my town paper to support me. I wouldn't give a cent for it, if I hadn't been sure it would."

Allen assured the ambitious politician that there was plenty of time to consider the matter, and, every thing being equal, the *Western Republic* would favor a home man.

"Be sure to fight the rings; we've got plenty o' 'em, and we brought ye here to fight 'em," said Simmons, and then, lowering his voice to a mysterious whisper, he added: "There's another thing I wanted to mention to ye. You've noticed that old *rock house on the hill*, didn't you?"

"Yes," answered the new editor, now remembering the chateau or castle-like building which stood silent and apparently deserted on a hill about three-fourths of a mile from town.

"WELL, YOU'VE GOT STARTED!"

"Well, don't say any thing about it, keep away from it. It's a mystery which no one ought to meddle with."

"Is it inhabited?" Allen asked, laying his pencil down by the side of his manuscript.

"Yes, but keep away from there. Less one can have to do with it the better. We don't want that thing stirred up any more," and shaking his head mysteriously, the astute politician left the office.

"What in the world does he mean by the mystery attached to that old *stone house on the hill?*" the new editor asked himself. "It looks as if it might be an old French chateau that had been built during the days of Charlemagne, and inhabited ever since by ghosts. Is there a mystery connected with it?"

For the moment he had forgotten his salutatory, and was sitting with his head bowed on his hand, when Mr. George Strong suddenly entered the office, and unceremoniously seating himself opposite the editor, said:

"I'm very glad I've found you alone; I want to give you a hint or two. Yer a young man, an' though ye may know a good deal o' the world, ye don't know nuthin o' Turley's Pint."

"I am thankful for any advice you may choose to give, Mr. Strong," returned the new editor.

"I guess ye noticed how I sawed off Tom Simmons yisterday. He's a politician, and a Republican. O' course he wanted this to be a Republican paper, but ye see Turley's Pint is in a Dimicratic county, and it wouldn't do. We've got a big majority in this county. The *Western Republic* is to be run in the interest o' Turley's Pint, an' it can be run best without bein' political."

The new editor was inclined to agree with Strong, who, having considerable property in the town, would be materially benefited by the upbuilding of Turley's Point.

"It is too early to shape the future policy of this paper, Mr. Strong," said the editor. "My idea from the first was to publish an independent newspaper."

"That's the idee exactly. Well, I guess I won't stay here an' bother ye any longer."

"By the way, Mr. Strong," said Allen, "who lives in that old stone house on the hill?" Mr. Strong, turning on the young editor a look of astonishment and terror, answered:

"Mr. Gray, you'd better not inquire. Let that matter rest. Don't mention the old house, don't go near it. We want the thing to die out if I kin. It's a cuss to Turley's Pint, and least said the better." Without attempting any further explanation he, too, went out, leaving the new editor more interested than ever. He sat a few moments wondering what that remarkable mystery could be, and then, bethinking himself that his salutatory was not finished, seized his pencil and resumed his work.

Again the door of his dingy office was darkened. It was Toney Barnes who entered with a roll of MS. under his arm and the smile of a successful poet on his face.

"I've got a few little pieces here that I want to read ye," he said, dropping down upon a seat by the editor's side.

"Leave them to be read at my leisure," said the editor.

"No, no; you can't understand it half so well as if I read it myself. Now just listen here." He unrolled some manuscript, of which he was evidently very proud and

"I'VE GOT A FEW LITTLE PIECES HERE."

putting one foot on the table, tilted his chair backward and began:

"THE WAIL OF THE SWAMP SPIRIT."

"In that dark deep green old wood,
Where evening shadows fall,
Where the giant oaks have stood,
Stately, grand and tall;
Where the shy toad is sitting
On his stool by nature made;
Where the twilight hues are flitting
In the cool and silent shade;
There you see, at twilight gloamy,
From the dark green swamps arise,
A ghastly form of dewy vapor,
With cheeks of death and hollow eyes—"

"How much more of that have you?" interrupted Allen.

"There are fifty-six pages in all."

"You had better bring it out in book form."

"I thought I would first run it in the *Western Republic*."

"But our paper is not copyrighted, and some unscrupulous publisher might steal this from you."

His reasoning was so clear that the poet became alarmed, and, closely rolling his manuscript as if he feared the precious treasure might be taken from him, hurried home to lock it up. Smiling at his successful ruse, Allen finished his salutatory and, gathering up what news he could about the dull little village and surrounding country, handed in sufficient original copy to fill the local columns.

There were some advertisements to go in the paper, several clippings, and the form was made up. Miss Hopkins sent her regrets that, owing to a spell of neuralgia, she would not be able to prepare any thing for the first issue, but she would be on hand without fail for the second. Allen was wicked enough to mentally thank that spell of neuralgia. After the form had been made up and planed down, it had to be unlocked to insert the startling intelligence that Mrs. Smith had gone to visit her married daughter, Mrs. Josie Stone, at Pipkinsville, four miles away.

For the last time the form was locked up, planed down, put on the press, and the first issue of the *Western Republic* run off and sent to the world.

(TO BE CONTINUED.)

Divorced Women.

What becomes of divorced women? A vast field of unexplored territory is opened by the question. Just as mules are supposed to seek for their death some spot where no eye can behold them, so divorced women, once divorced, are believed to withdraw to some mysterious limbo in which the rest of their lives is spent unobserved. But The Tribune has been at the pains of collecting statistics about them, and it finds that they can accurately be divided into the four following classes:

Remarried within a year, 75 per cent.; waiting for an offer, 10 per cent.; fallen into evil ways, 10 per cent.; devoted to celibacy, 5 per cent.

These figures have been compiled from a comparison of the divorce lists with the marriage registers; from the statements of judges, justices of the peace, clergymen, lawyers and court officials, and from personal inquiry among those who have been divorced. They can be accepted as fairly and substantially correct.—Chicago Tribune.

Too Much for the Indian.

These military anecdotes remind me of a story I heard Gen. Sheridan tell once, and which I do not remember having seen in print before. The general at the time was in command of some western troops fighting the Indians. A band of the latter had made a sudden attack on a detachment of his men, but fortunately they had a mountain howitzer mounted on a mule. Not having time to take it off and put it in position, they backed up and blazed away at the Indians. The load was so heavy that the mule and all went tumbling down the hill toward the savages, who, not understanding that kind of fighting, took to their heels. Afterward one of them was captured, and when asked by Sheridan why he ran, replied:

"Me big Injun, not afraid of little or big guns, but when white man fires whole jackass at Injun, he don't know what to do."—New York Tribune.

A French Bill Sykes.

A most dangerous species of Bill Sykes has been arrested, together with a ferocious mastiff which he owned, by the Paris police. The malefactor was the terror of the Ternes district, and his specialty in crime was to prowl around the neighborhood at night and set his dog at the throats of belated wayfarers. The mastiff only knew and obeyed his master, and at a word from that worthy would fly at the throat of a passer by, and never relax his hold until the pockets of his victim had been completely rifled. The latest victim was a government employe, who has almost succumbed to the injuries which he received from the dog. Sykes, who was known by the appropriate name of "The Butcher," has been safely lodged in the depot, and his enormous dog will be shot after the condemnation of its master.—Paris Cor. London Telegram.

Get Married.

The married are longer lived than the single, and, above all, those who observe a sober and industrious conduct. Tall men live longer than short ones. Women have more chances of life in their favor previous to 50 years of age than men have, but fewer afterward.—Philadelphia Call.

Ruby Mines, Burma.

One of the finest sanitariums in India is that of Bernard-Myo, on the broad rolling plains of Enjouk, on the northern slopes of the hills bounding the ruby mining district of Mogok, Burma. Bernard-Myo is over 6,000 feet above sea level. The ruby mining district may have a population of over 6,000 people belonging to many different tribes. The mines are of three kinds—the working of fissure veins, washing in a somewhat similar manner to the hydraulic mining in California, and what may be called placer diggings. The third class of mines is at present the most important.

At depths varying from ten to thirty feet, in the flatter lands of the valleys, there occurs a layer of corundum from a few inches to a few feet in thickness. When this corundum is brought to the surface myriads of small rubies glitter in the sun. Almost all the stones are water worn or of irregular shapes, and it is rarely that a flawless ruby is found. So rare is a ruby of the finest water, that one of three carats is worth ten times the value of a diamond the same size. The district of Mogok is situated between Mandalay and Bhamo, and is nearer to the former place.—Scientific American.

Damping Grain.

One of the largest millers in the United States, C. A. Pillsbury, is credited with asserting that American millers do not dampen their wheat before grinding it. This is correct of some millers, but not of all, and the reason is not attributable to differences in millers, but to differences in wheat. Most of the California wheat ground in this state is moistened, because it is found necessary to do so. On the other hand, Oregon wheat will not stand dampening, as it contains enough water without this treatment.

On this account local millers prefer California wheat, as they can add the necessary water for nothing, which they have to pay for in the Oregon article. When shipped abroad or stored for months at tidewater, there is less difference, as wheat which is not moist will become so when in a damp atmosphere. California wheat when afloat gains 2 to 3 per cent. from absorption of moisture. A certain percentage of water in wheat is essential to render it fit for grinding, and the moisture has to be either found in the grain or applied artificially thereto.

THREE LUCKY MEN.

San Franciscans Who Won Louisiana State Lottery Prizes.

San Francisco seems to have more than her share of luck in carrying off the prizes of the Louisiana State Lottery Company. The latest winner is E. Brackett, a young machinist living at 205 Third street and for the past thirteen years an employe of Messrs. Thomson & Evans of Beale street. Mr. Brackett was seen at his rooms last night and stated that he had received that morning $15,000 in Wells, Fargo & Co's. Bank, that sum representing one-fortieth part of the capital prize of $600,000 in the drawing of the 18th ult., in which 69,704 was the number of the capital prize winning ticket. The winner is a native of Illinois, and when young was brought by his father, a Colonel of the United States army, stationed in this city, to San Francisco. By an arrangement had prior to the drawing Mr. Brackett shares his handsome winnings with a brother living in San Jose. His room mate first brought to him the numbers of the drawing, as telegraphed to the *Chronicle*, and comparing them with the seven tickets he held, the last proved to be the winning one.

H. Small, who has been for some years engaged in the City and County Surveyor's office, won $2,500 in the same drawing. He held a coupon of ticket No 43,085, and with it carried off the fortieth part of the third prize of $100,000. The money was paid in gold coin. A. L. Bowbay held a second coupon of the same ticket and received a check for $2,500 on the Anglo-California Bank. He had bought the ticket himself and presented it to a lady, who thus became the lucky winner.—*San Francisco* (Cal.) *Chronicle*, Jan. 3.

THE "ORPHEUM," SAN FRANCISCO.

Our readers who recently visited this popular theatre (popular prices, too) are loud in their praises of the excellent company and intensely amusing programme.

THE "LOUVRE," SAN FRANCISCO.

"The best in town and at the lowest prices, too," was the remark of a certain well-known citizen who had lately visited the "Louvre."

Here is a stanza for exercising the tongue. Repeat the lines rapidly:

The swan swam over the river; swim, swan, swim,
swam;
The swan swam back again; well swan, swam.

THE CHILL BLAST

That sets the naked branches a-quivering, is not felt by the wealthy valetudinarian indoors, but not all the covering that can be piled on his warm bed, nor all the furnace heat that anthracite can furnish, will warm his marrow when chills and fever runs its icy fingers along his spinal column. Hostetter's Stomach Bitters is the thing to infuse new warmth into his chilled and aguish frame, to remedy the fierce fever and exhausting sweats which alternate with the chill. Dumb ague, ague cake, bilious remittent—in short, every known form of malarial diseases is subjugated by this potent, and at the same time, wholesome and genial medicine. Biliousness, constipation, dyspepsia, sick headaches, loss of appetite and sleep, kidney trouble, rheumatism and debility are also remedied by it. Use it with persistence to effect a thorough cure.

"Ah, Mr. De Dood, is your face for rent?" She languidly asked and slow.
"Of course not," he said; "but why?" She said; Because it looks vacant, you know."

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

When a girl is bent on getting married she stands up straighter than ever.

YOUR FRIEND COMMITTED SUICIDE.

You never suspected it, none of his friends dreamed of it, he did not know it himself, but it is exactly what he did, nevertheless. Do you remember his sallow complexion? Do you recollect how he used to complain of headaches and constipation? "I'm getting quite bilious," he said to you one day, "but I guess it'll pass off. I haven't done anything for it, because I don't believe in 'dosing.'" Soon after that you heard of his death. It was very sudden, and every one was greatly surprised. If he had taken Dr. Pierce's Pleasant Purgative Pellets he would be alive and well to-day. Don't follow his example. The "Pellets" are easy to take, mild in their action, and always sure.

Are you feeble in health? Try Dujardin's Life Essence. You will find your strength restored, and instead of depression of spirit, you will feel the energy of youth. It will act well in both old and young. Price, $1.50 a bottle. All druggists.

CURE OF PNEUMONIA.

William A. Sawyer, Hess Road, Niagara Co., N. Y., says:

"About a year ago I was taken with a severe pain in both lungs. I was first attacked with a violent chill, then a dreadful pain and then a cough accompanied by considerable fever. It looked very much like a bad attack of pneumonia. A friend of mine procured five ALLCOCK'S PLASTERS. One he put under each arm, one under each shoulder blade, and one on my chest close around my throat. In a few hours the cough ceased, the pain gradually abated, and I broke out in a profuse perspiration. I fell into a profound sleep, and the next day was almost well. I wore the Plasters eight days afterwards, and have never had any trouble since."

If it comes to blows, Dakota is bound to come into the Union.

We accidentally overheard the following dialogue on the street yesterday:

Jones. Smith, why don't you stop that disgusting hawking and spitting?

Smith. How can I. You know I am a martyr to catarrh.

J. Do as I did. I had the disease in its worst form but I am well now.

S. What did you do for it?

J. I used Dr. Sage's Catarrh Remedy. It cured me and it will cure you.

S. I've heard of it, and by Jove I'll try it.

J. Do so. You'll find it at all the drug stores in town.

The toy pistol teaches the young guy, dear, how to shoot.

VALUABLE DISCOVERY.

A General of the army, for a number of years stationed in Alaska, discovered that the Indians were using herbs and plants that cured Dyspepsia, Headaches, Constipation, Rheumatism, Piles, Asthma, etc. He will send trial package, with directions, to any address by mail, upon receipt of $1.00. Address General Thompson, Lock Box 2440, San Francisco, California.

More honored in the breeches than in the observance—Slim calves.

EDWIN FORREST'S SECRET.

The great tragedian, Forrest, had a secret which everybody ought to learn and profit by. Said he, "I owe all my success to the fact that everything I have undertaken I have done thoroughly. I never neglect trifles." That's the point—don't neglect trifles. Don't neglect that hacking cough, those night-sweats, that feeble and capricious appetite, and the other symptoms, trifling in themselves, but awful in their significance. They herald the approach of consumption. You are in danger, but you can be saved. Dr. Pierce's Golden Medical Discovery will restore you to health and vigor, as it has thousands of others. For all scrofulous diseases, and consumption is one of them, it is a sovereign remedy.

What a relief it is to write the figures "1889." The combination "1888" always reminded one of a dude crossing a vacant lot in company with three fat girls.

If Success be the true test of merit, it is a settled fact that "*Brown's Bronchial Troches*" have no equal for the prompt relief of Coughs, Colds, and Throat troubles.

PIANO FOR SALE.

An extra fine instrument which I received in trade will be sold at an unusually low figure. Address P. O. Box 2302, San Francisco, Cal.

Send $5 and receive 100 pounds good dry fruit, (10 varieties,) or send $10 and receive 100 lbs. best and finest California dried fruit made, (10 varieties,) securely packed. Smith's Cash Store, 418 Front St., San Francisco, Cal.

If a dangerous place is where no one ever gets out alive, what a dangerous place this world is!

DWIGHT'S SALERATUS

RHEUMATISM AND NEURALGIA
These twin diseases cause untold suffering. Doctors admit that they are difficult to cure—so do their patients. Paine's Celery Compound has permanently cured the worst cases of rheumatism and neuralgia—so say those who have used it.

"Having been troubled with rheumatism at the knee and foot for five years, I was almost unable to get around, and was very often confined to my bed for weeks at a time. I used only one bottle of Paine's Celery Compound, and was perfectly cured. I can now jump around, and feel as lively as a boy." FRANK CAROTI, Eureka, Nevada.
$1.00. Six for $5.00. Druggists.
Mammoth testimonial paper free.
WELLS, RICHARDSON & CO., Props., Burlington, Vt.

"Paine's Celery Compound has been a God-send to me. For the past two years I have suffered with neuralgia of the heart, doctor after doctor failing to cure me. I have now taken nearly four bottles of the Compound, and am free from the complaint. I feel very grateful to you." CHAS. H. LEWIS, Central Village, Ct.

Paine's Celery Compound
"I have been greatly afflicted with acute rheumatism, and could find no relief until I used Paine's Celery Compound. After using six bottles of this medicine I am now cured of rheumatic troubles."
SAMUEL HUTCHINSON, So. Cornish, N. H.
Effects Lasting Cures.
Paine's Celery Compound has performed many other cures as marvelous as these,—copies of letters sent to any address. Pleasant to take, does not disturb, but aids digestion, and entirely vegetable; a child can take it. What's the use of suffering longer with rheumatism or neuralgia?

DIAMOND DYES Give Faster and Brighter Colors than any other Dyes. | BABIES Living upon Lactated Food are Healthy, Happy, Hearty. It is Unequaled.

ARM & HAMMER BRAND
To Housekeepers and Farmers.—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons, which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.
OUR TRADE MARK
CHURCH & CO'S SODA
ON EVERY PACKAGE.
CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ¾ pound packages full 12 ounces net, Soda or Saleratus same as specified on each package.
Packed in Card Board Boxes. Always keeps Soft.
SODA OR SALERATUS

SPIES OF WAR.

Discussion as to Whether It Is an Honorable Undertaking.

Is the service of a spy in war honorable? It certainly cannot be set down as always dishonorable, since some men who have performed it have been regarded as in the highest degree worthy of honor. Nathan Hale, of Connecticut, an American patriot of the highest character, volunteered, after Washington's defeat on Long Island, to go to the mainland and seek information of the strength, plans and situation of the enemy. Hale was a brave young officer, and had distinguished himself by dashing and brilliant service. Probably he had no liking for the work of a spy; but it was enough for him that his commander desired a brave and prudent man for the service. He volunteered, and was accepted.

Hale crossed to the mainland in safety, obtained full knowledge of the situation, and set out to return to Washington's camp. He was discovered by the enemy and hanged in New York by the order of Sir William Howe, without trial. His last words were: "I only regret that I have but one life to lose for my country."

The virtues and bravery of Hale alone would have invested the service of the spy with a considerable degree of honor, even if there had not been many other spies whose work had been almost, if not quite, as brave.

But there is no doubt that the duty of a spy is commonly regarded as in some sense dishonorable, even by those who take advantage of it.

Vattel, the author of the "Law of Nations," says that "a man of honor, who would not expose himself to die by the hand of the common executioner, ever declines serving as a spy; he considers it beneath him, as it seldom can be done without some kind of treachery. A sovereign, therefore, cannot lawfully require such a service of subjects, except, perhaps, in some singular case, and that of the last importance."

Following this idea, the French have always had a certain repugnance to spies, even their own. The story is told that, at the time of Napoleon I, a French spy was charged with making a plan of the fortifications of Mayence.

When he arrived at that city, he found the German garrison expecting the arrival of an English general. The spy was able to speak the English language perfectly well, and it occurred to him that it would be an excellent plan for him to impersonate this English general.

He carried out his plan so skillfully that no one suspected that he was not a genuine English officer; and as the English were in alliance with the Germans he was taken through all the fortifications and given every item of information that he wanted.

When he had seen and taken note of everything, he disappeared, and returned to Napoleon's headquarters. His information proved of great service to his country, and it was proposed to the emperor to decorate the man with the cross of the Legion of Honor.

"No, indeed," said Napoleon. "I did not establish the Legion of Honor to reward services of that kind."

But he gave the spy $5,000 in money.

In opposition to the doctrine laid down by Vattel and Napoleon, it may be urged that the very possibility of dishonorable death, and the knowledge that a spy's service may be regarded as "beneath a man of honor," may render the voluntary performance of this duty more an act of bravery than the most daring service on the battlefield.

The soldier has the rush and excitement of battle to spur him on to brave deeds; the spy has before him the possibility of an ignominious death. He must meet peril alone, and in cold blood. The soldier's brave service may be the result of a sort of physical courage, while that of the spy must be the result of moral courage.

As America has honored a spy, in the person of Nathan Hale, it is distinguished as the first nation to institute a full trial by court martial of the spies of an enemy. Previous to this, it had been customary to send spies to the gallows, as Nathan Hale was sent, merely upon the order of a commander in chief.—Youth's Companion.

De Quincey's Deference.

De Quincey suffered from indigestion. His tastes were a little troublesome to the servant who prepared his repast. Coffee, boiled rice and milk, and a piece of mutton from the loin were the materials that invariably formed his diet. The cook, who had an audience with him daily, received her instructions in silent awe, quite overpowered by his manner, for had he been addressing a duchess he could scarcely have spoken with more deference. He would couch his request in such terms as these: "Owing to dyspepsia afflicting my system, and the possibility of any additional disarrangement of the stomach taking place, consequences incalculably distressing would arise; so much so, indeed, as to increase nervous irritation and prevent me from attending to matters of overwhelming importance, if you do not remember to cut the mutton in a diagonal rather than a longitudinal form."—Pittsburg Bulletin.

Transporting a Herd of Buffaloes.

The Manitoba fast freight train from Winnipeg brought in a herd of eighty-three live buffalo, which were on their way to C. J. Jones' ranch, near Garden City, Kan. Mr. Jones bought these queer cattle from Warden Bengon, of the Northwest Territory, who since 1877 has succeeded in raising this herd from five animals captured at that time. Mr. Jones has already on his ranch about fifty head of bison, and a goodly number of animals resulting from a cross between the bison and ordinary beef cattle. The matter of domesticating these animals is attracting much attention among breeders, as the wild bison is almost extinct, and buffalo meat is worth 50 cents a pound in Chicago. A great many curious sightseers visited the Manitoba yards while the cars stood there.—Minneapolis Tribune.

DECAY THE BREATH OF LIFE.

Destruction and death are apparent, they greet us
on every hand;
There is no immutable substance in air, in sea or
the land.
Death, ruin, decay, will confront us—Oh! where
shall we find rest and peace?
And strangest of all, this destruction seems somehow to hint at increase.

The beautiful flower of the springtime brings
something that whispers of love;
Corollas are towers of wedlock, true wedlock,
that's sanctioned above;
And stamens and pistils, uniting, decay for the
offspring to come,
And the flowers from the ashes up-springing a
new tint and fragrance have won.

The fire that burns over our cities, and leaves only
iron and stone,
Becomes but a process creative and burns into
turret and dome;
And the flames kindle feelings half dormant and
sympathy wakes from her sleep,
And brothers unheard of respond to the call and
tenderly dry eyes that weep.

But above all these fields so material we trace the
same principle higher—
Into the realm of the spirit, which expands
through destruction and fire.
Old customs, old forms and old errors are moss-grown and hidden by rust,
And the soul's larger growth demands just the
food that springs from their ashes and dust.

Do you mourn that the new feet are stronger, and
carry the faith far beyond
The old theological trifles that you have been
resting upon?
And, if bolder grown, it should scale the high
fence and see fields man never has trod—
Then welcome the sight and sing loud for joy, for
it tells us of progress toward God.

—Eliza A. Martin in Boston Transcript.

French Marriage Laws.

An oft repeated and oft neglected warning to English girls about to marry Frenchmen is repeated in an English journal. It does not yet seem to be understood that, though a woman may be married to a Frenchman according to all the forms of the English law, she is not necessarily married in France. The French law still requires that the absurd and antiquated form of asking the head of the bridegroom's family to consent to a marriage shall be gone through, and if this is omitted the marriage is invalid. A very sad case came under my own cognizance recently. A young Frenchman, visiting in this country, became engaged to a young English lady. Inquiries were made, the gentleman's position and prospects appeared satisfactory, the affection was mutual, and the marriage was duly solemnized in the parish church and before a registrar. The latter precaution was taken because it appears to have been thought by the bride's friends that only a civil marriage was recognized in France. But nobody had thought of inquiring whether the bridegroom, a man of independent means, 27 years of age, had troubled to ask any one's leave before he got married. The man took his wife over to France, and a couple of years afterward coolly informed her that they were not married at all! Apparently there was no redress for the unmarried wife, who had to return to her relatives with this indelible stigma upon her.—English Paper.

How Paducah Was Named.

The city of Paducah, Ky., has, I notice, been coming to the front recently, and considerable has been printed in the newspapers concerning the place. In a recently published article an attempt was made to give a history of the city, and the writer, lacking information as to the origin of the name, fell back on that most convenient makeshift, "an old Indian chief." Now, there may have been an Indian chief with a name similar to Paducah, but old time river men have an altogether different idea of the origin of the name. It is this:

When steamboats first began navigating the Ohio river they depended on wood for fuel, and wood yards were located at convenient points. One of these wood yards was located at the mouth of the Tennessee river by an Irishman named Patrick Dugan. Of course he was commonly called Pat Dugan. Pat Dugan's wood yard and the few shanties occupied by himself and his woodchoppers eventually grew to a thriving city, and what more natural than that the original name should be retained, and Paducah is a very natural corruption of the ancient and honorable name, Patrick Dugan.—Steamboat Mate in St. Louis Globe-Democrat.

A Love Affair of Schubert.

The Countess Caroline, an enthusiastic girl of great beauty, became the object of Schubert's romantic passion. His exterior was anything but that of an ideal lover. Rude, unshapely features, thick nose, coarse, protruding mouth, and a shambling, awkward figure, were redeemed only by eyes of uncommon splendor and depth. The inexperienced maiden, belonging to a haughty family, hardly understood the devotion of the humbly born genius. Only once he was on the verge of a full revelation. She asked him why he had dedicated nothing to her. With abrupt, passionate, intensity of tone, Schubert answered: "What's the use of that? Everything belongs to you." This brink of confession seems to have frightened him from any further intercourse with the family, yet he never forgot his beautiful dream, or loved another woman.—Cassell's Magazine.

Unnecessary Exposure.

My attention was drawn recently while attending a very large funeral, one of the largest seen in Buffalo since that of President Fillmore, to the fact that many of the friends subjected themselves to an attack of pneumonia by standing at the grave with their heads uncovered. It would be a good thing and would show no disrespect to the dead if the officiating clergyman would request all to keep their hats on during the service at the grave. No good can come of removing the hat in a cold, penetrating wind, and harm is doubtless often the result. Who will be the first bold enough to start this reform?—Buffalo News.

Music Everywhere.

Music boxes are now displayed in Chestnut street windows that are set in decanters, inkstands, work baskets and ever so many more clever deceptions, so that a lady visitor may suddenly hear "Twickenham Ferry" ringing apparently from Mrs. Dorcas' thimble, or a sociable caller be astounded to hear "Comin' Through the Rye" emerging from the bottle that is passed. The decanters hold liquor and begin to play when the stopple is removed.—Philadelphia Times.

His Favorite Exercise.

(Time 11:15 p. m.)—She—Mr. Tiresum, what is your favorite exercise?

He (enthusiastically)—Walking.

She—I am glad to know it. I was afraid you had forgotten how.—Burlington Free Press.

According to The Union (Oregon) Scout a hip bone nearly as large as a man's body was found in the Wallowa brick yard. A rib seven feet long was also found. The bones are probably parts of the skeleton of some huge extinct animal.

Mr. Joseph Chamberlain has nine orchid houses joined together and to the drawing room and lighted with electricity. His stock of orchids is said to be worth $40,000

UPON THE RIVIERA.

PLEASANT PLACES ON THE SHORE OF THE GULF OF GENOA.

Italian Resorts Where All Travelers Go. Differences of Opinion on the Old Towns—Of Interest to Readers and Writers—Three Winter Capitals.

The eastern shore of the Gulf of Genoa—the Riviera di Levante—differs from the Riviera di Ponente, which was described in my last letter, in being very much damper. The chief wind is from the west, which, coming over the sea, nearly always brings rain. But, as the climate is fully as warm as at San Remo or Nice, the dampness adds to the beauty of the vegetation; there is plenty of grass even in summer, and the number of deciduous trees is much greater. When the leaves are fallen these trees are hardly noticed in winter; but in summer their fresh green lends a great charm to the semi-tropical aspect of the palms, the lemons and the olives. The nearness of the high mountains to the coast, the abrupt changes of strata, the frequent precipitious rocks, and the pine groves which often come down to the edge of the sea, give a different character to the scenery.

The only two places in this region which are as yet thoroughly desirable are Sta. Margherita and Rapallo, in the latter of which there is an excellent good hotel and an English church. But as they are only about a mile apart the conveniences of one can be enjoyed at the other. There are an unusual number of beautiful walks and very good carriage roads leading to various points in the interior. The bay is so protected by the promontory of Porto Fino that boating is nearly always possible and pleasant. There are villas to be had at both places and on the road between; but the resident foreign colony is not yet large.

Spezia is still frequented in summer by Italians for bathing, but its attractiveness to foreigners has diminished since it has become a great Italian naval station, and its lovely hills have been covered with huge fortifications.

THE BROWNINGS' OPINION OF PISA.

Pisa is the remaining warm town of Northern Italy. Its climate is so much milder than that of Florence that in the last century invalids often passed the winter there and it was a great place of resort. The court of Tuscany, as Horace Mann tells us, used to come for a month or two, and Smollett spent there the year before his death, finishing his best and most amiable novel, "Humphrey Clinker." In the early part of the century, too, it had a large English colony, in addition to Shelley, Lander, Byron and Lady Blessington, but at present the English colony has so fallen off that the church, which is transferred for the summer to the Baths of Lucca, has but a scanty congregation. The hotels are of the very best; Leghora and Viareggio are a short distance off in one direction; Lucca, with its old walls, now used as promenades, its churches and its pictures, close by, and Florence, but two hours distant by express train, so that it is perfectly easy to pass a day there when desirable.

When the Brownings spent the winter there in 1847 they found it dull, but they had brought no English books with them; apparently received no newspapers; the church library was soon exhausted, and communications were not sufficiently rapid to allow a subscription to Vieussieux's circulating library at Florence. Since then everyone else has voted Pisa dull, although personally I was not impressed by this in the month that I spent there. Even the hotel was entertaining; for, except ourselves, no one ever remained more than two days and rarely more than one; and, as in a kaleidoscope, the changes were amusing and often agreeable.

There are really only three winter capitals in Italy—Florence, Rome and Naples. Turin, Milan and Bologna are too cold and too snowbound to attract sojourners. Yet Turin has a charming society and a brilliant court life, and it is the only place, outside of Rome, where, in deference to family traditions, the old court is maintained. For those who can stand the cold it would be a good place for an enterprising mother to introduce her daughters into high society and perhaps make brilliant marriages for them. In Milan and Bologna one has the best operas, the best ballets and the best concerts in Italy. At Venice, although it rarely freezes, it is very damp, and this dampness is sometimes so cold that one wonders why the canals are not a solid block of ice. Add to that that the houses and hotels have very large rooms and small facilities for heating them.

FLORENCE, THE "WINTER CITY."

Florence is the literary and artistic center, and, according to Ouida, is pre-eminently the "winter city." Its galleries are thronged by those who delight in the infancy of art, which is often so near akin to the art of infancy. When one looks at the number of tall, angular English old maids, in various positions of rapture, one sometimes thinks that their admiration for Botticelli and Masaccio comes from a vague idea that these artists have endeavored to idolize their own charms. There, too, one finds the latest productions of modern art, whether they be the water colors of Newman—some of Tuscan country and of Lucca architecture, others such vivid renderings of the heat and glare along the Nile that one wishes never to go to Egypt again—or whether they be the last statues of Italian or American sculptors—one so perfect in its naturalism, in its details of stuffs and clothes that the artistic feeling is smothered; the other such a clever production by skilled Italian hands of a coarse ideal that one wonders that the so called sculptor ever dared to put his hand to the clay model, for he rarely does more.

For a person of literary tastes Florence has many attractions and advantages. Besides the archives, which are easily accessible, there are several large public libraries, the best in Italy; and the service of the national libraries has been so regulated and improved that on a simple request a rare book or manuscript will be brought from the library of a distant city and placed at the disposal of the reader. In this way at Florence one has the command of the national libraries of the kingdom with their treasures. Then there is the circulating library of Vieussieux, by far the best lending library out of England, with its thousands of books in all languages, its excellent reading rooms, where the newspapers and magazines of every country may be found, and its well known corner for the chess players. Of course there are excellent modern book shops, as well as others, large and small, where old books and engravings may be bargained for. Indeed, a book collector can have great fun in Italy, although more at Rome than Florence, as libraries of dead cardinals or of bankrupt princes occasionally come into the market.—Cor. Philadelphia Times.

Educational.

Aunty—So you're studying Roman history, Bobby? Why did Cæsar hesitate when he came to the Rubicon?

Bobby—Oh, 'cause he wanted to see if he had the Gaul to cross it.—Harvard Lampoon.

HUNTING IN RUSSIA.

How the Czar and His Companions Pursue Lively Game.

A correspondent who has accompanied the Czar on his visit to the Caucasus, sends from Vladikavkas an interesting account of the sport to be had in that part of his Imperial Majesty's dominions. The whole of the southern and eastern part of Russia, he says, consists of great undulating steppes, not unlike the South Downs in places. The undulations yield many pleasant surprises to the sportsman in the shape of dense oak-coppices, which make excellent covert for wolves, foxes and woodcock. The result is that good sport may be had. The correspondent gives the following description of a wolf-hunt:

My host, Count Peter Schouvaloff, keeps a pack of fox-hounds here, and some forty or fifty gray-hounds and wolf-hounds. For those who can not or do not care to ride, the way is to stand at a covert-corner and shoot the game as the fox-hounds drive it by. The real sport, however, is to ride with three great wolf-hounds held by thong, fastened across the shoulders, passed through rings in their collars, and the loose end wound around the left hand. When the wolf breaks covert, running carelessly enough before the noisy pack, which he knows could never catch him, you slip your dogs, who have been for a moment or two nearly dragging you out of the saddle, between him and the covert and then begins the race for life or death. The other horsemen slip their dogs in turn, and unless there is a good covert near, the wolf is doomed. I do not believe that a single dog will tackle a full-grown wolf, but two will. Even then they would come off second best unless the hunter, with his short, loaded stick (hung to the wrist), came to the rescue. The first man up has to jump down, bestraddle the wolf, and hold him by the ears till the next arrives and gags him. The operation is generally left to the huntsmen, and it is not a pleasant one, for though the wolf can not bite once you have got hold of his ears, the dogs have a nasty habit of snapping at his neck, and often enough their sharp teeth meet in the hunter's hand.

One night, after an exciting day's work, during which we had shot three wolves and captured four, we heard a fearful yelling. On inquiring what was the matter, we learned that one of the huntsmen had "funked" during the day, and refused to gag a wolf, which another pluckier fellow was valiantly bestriding and holding by the ears, while the hardly less savage dogs snapped all around. He had on return been immediately tried and condemned, and was now undergoing a severe thrashing at the hands of his fellow-servants. We thought it no case for interference, especially as the other man's hand had been severely bitten. Another form of the sport is to form in line about three hundred yards apart, each man with his dog, whether wolf or gray-hounds, and in this way sweep over twenty or thirty miles of country, running down all you see. The only danger in riding lies in the numerous marmot-holes, which also now and then afford a refuge to some fox or hare just about to be seized by the dogs. The state of things below, when first a hare and then a fox bolt into the midst of the marmot family-party, must be curious. The woodcock alight in considerable numbers in their autumn passage south, and we shot many in the very garden, including one completely white. Other noble birds are the greater and lesser bustard, of which large quantities roam the steppes. The former are very wary, but you can get within shot by driving an ox-wain slowly to and fro or round and round, each time coming a little nearer.—*London Standard.*

FEEDING DAIRY COWS.

According to All Authorities Two Feeds a Day Is Sufficient.

My practice in the past has been to give two feeds a day, giving the cow full time to remasticate, digest and assimilate her food between feedings. With silage and bran as factors, it seems to be best to give a noon feeding of hay, clover or the like, as it has to be disposed of in some way, and to feed it at noon seems the best and most advantageous way of disposing of it. That the cow on dry feed should need time to digest her food, while the cow on grass eats all the time, is not an argument against the plan of feeding only twice a day; as grass is succulent, is rapidly digested and is prepared for assimilation by the least possible amount of stomach power; whereas dry food is digested slowly, and a greater amount of digestive force is used to perform the work, and in my opinion it is not wise to keep the stomach of the animal fully active all the time with a double duty of hurriedly digesting the old food before the previous meal is well out of the way. In feeding silage we have a food largely charged with the natural juices of the plant, and digestion is much more rapid and the morning feed of silage and bran is well on in the digestive canal before the noon feed of dry feed.

On an exclusive dry diet, I am wholly inclined to give only two full feeds per day with the grain mixed with them at that; so that there shall be no separation in rumination and digestion, and so that one feed can be got out of the way before taxing the stomach of the cow with another ration; but with silage as part of the ration I do not see any good way of avoiding three feeds per day. While I have no experimental data on this subject, my practice has confirmed me in the above views.—*J. Gould, in Rural New Yorker.*

CONFESSIONS OF AN ACTRESS.

How a Chicago Girl Made Her First Appearance on the Regular Stage.

You may talk of the pride and joy of the war horse when he "smelleth the battle from afar." I tell you his feelings are tame compared to my emotions when I signed that contract. It was my first engagement. That is to say, my first "real good" engagement. I had gone on and said, "My lord, the carriage waits," and, "A gentleman to see you, my lady," before, but I had never had a chance to play a good part, and now I had not only one, but half a dozen, good parts, for, you must know, we were going to play a "repertoire." At last I could let out my pent up feelings in an emotional part.

My friends had never shown that enthusistic admiration for my talents which I felt was my due. Now I would show them that I was not what they were pleased to call "a stage struck idiot," but a "heaven born genius!" When I applied for my first engagement I was deeply incensed when I found what my part was. I mean the "My-lord-the-carriage-waits" part, but I reflected that all geniuses were sure to be snubbed. I would be patient. I would bide my time. When I saw Miss G——, the leading lady, rehearse I was sure she could not play the part. So I laid my plans.

True, I only had two lines to speak, but I would deliver them with such telling force as to astonish every one. In the meantime I would learn the leading part by listening to rehearsals. It would be apparent to every one the first night that the leading woman was miscast. They would want a change. I would play the part, make a hit, and then my fortune would be made. I felt sorry for the leading woman, for she was always pleasant, but I reflected that she was 25 years old and if she was ever going to make an actress she ought to be one by this time. So the sooner she found out she could not act the better for her.

The first night came. I was at the theatre at 6 o'clock making up. I was all dressed by 7. I walked up and down the dressing room, thinking what I would say to the manager when he offered me the leading part. At last the curtain rang up. I did not go on until the third act, but I went up on the stage and watched the play. To my surprise the leading woman got a great deal of applause. At the end of the second act she was called before the curtain. "She must have a great many injudicious friends in front," thought I. When the third act went on I was at my place. When my cue came I went on in the style I had practiced. With a stately tread I advanced to the center of the stage. "My lord, the carriage waits," said I, in my best Delsarte voice. The leading man, to whom I addressed my remark, gazed at me in dumb amazement. The leading woman turned scarlet under all her "make up." "Aha," thought i, "she sees a rival!" When I went off the stage what was my chagrin to see her in spasms of laughter. The leading man seemed angry about something.

I thought he was indignant because she laughed. "What's the matter?" I said to him. "Matter! How dare you come on and ruin my best scene! Whoever put you up to that will answer to me for it. It was that scoundrel Jones that did it. Just because he knew I would make a hit in the part. I'll teach him!"

What on earth did he mean? I was perplexed, uncomfortable. What had I done? Was this a plot against me? I had heard of such things. Miss G—— called me to her. "Come here, my dear," she said; "don't feel bad; he'll get over it; he is quick tempered, but he's kind hearted. You meant all right, but where on earth did you get that walk and that tragic voice?"

She nearly burst out laughing again, but her cue came. She gave me a kindly little pat on the cheek with her fan and went on. Dear, kind hearted, fun loving Annie G——. How many times since we have laughed over that night. I went down stairs in a daze. Where were all my plans, my dreams? Vanished, as many a poor girl's have vanished on the first night of a new piece.

I learned afterward that the stage manager was going to take me out of the part, but Miss G—— interfered and begged them to let me keep the two lines and she would coach me in them. She did, too, and then began the long list of favors I have to thank her for. But, goodness, how I have wandered from my subject. I was going to tell you of my first good part, but this letter has grown so long I am afraid to write more, so I'll leave that until another time.—Columbine in Chicago Tribune.

A Great French Art School.

Julien's art schools are, as they deserve to be, increasingly popular. In the four schools there are about six hundred students, many of them really fine professional artists, who feel the need and refreshment of study in such a course, and under the four great painters of the world. Of the four Laurens and Lefebre are the most sought for, as they are the strong men of the beaux arts. The work done under them is truthful and earnest.

The models pose at 8 o'clock in the morning, and study lasts from then, with an hour—from 12 to 1 o'clock—as intermission, till 5 o'clock in the afternoon. There are no holidays the year round, except Sunday and the 14th of July.

In the men's schools the course is very much the same as at the Beaux Arts. The curriculum of the women's school is not quite so severe, but much the same, and the present year is coming much nearer it than hitherto.

The American women are reckoned among the stronger workers. It is a temptation for those who love art, for its own sake, to linger here studying and working in this atmosphere, full of the beautiful, gaining that strength, the lack of which is so often felt in America.—Paris Cor. Baltimore American

A doughnut received by Josiah Tillotson of Vermont, in his Christmas stocking, sixty-four years ago, is now on exhibition in Bennington.

WHAT IS NEWS?

The Fanciful and True Derivations of the Word.

This word is derived from the initial letters of the four points of the compass arranged in a device in the form of a cross, and placed at the top of some of the earlier news-sheets to indicate that their contents were derived from all quarters. But it is easy to show that this is purely fanciful. First, the earliest newspaper dates from 1662, and we find the word news, exactly in its modern sense, in Shakespeare, who died nearly fifty years earlier, namely, in 1616. Thus we have ("Macbeth" 1. 7), "How now?" "What news?" ("Winter's Tale," 4. Cho.) "But let time's news be brought!" ("King John"). "Even at that news he dies." This list, which might be extended indefinitely, from Shakespeare and other old writers, would alone be sufficient to dispose of the north, east, west, south theory; but a reference to the equivalent words in the tongue to which England is most nearly allied will further show its fallacy. In German the initials of the points of the compass read in this order: "N., O., W., S.," while the word for new is neuigkeiten, obviously impossible of derivation from these four letters, while it is derived from the word new. Again, in the French the initials are N., E., O., S., while the word for news is nouvelles, once more simply the plural form of now.

The true derivation does not seem difficult to trace. Some take it directly from the German "das neue," which is an abstract noun signifying "the new" and equivalent to our news. The genitive is neuce, and the phrase "Was giebts neues?" renders the exact sense of our "What's the news?" Moreover, the old German spelling is new, genitive newes. Yet this, plausible as it looks, is not the origin of the word. When we find in Anglo-Saxon such a phrase as hwæt niwes? (what news) we can be at no loss to determine that the word is of pure low German or native English origin, although the French nouvelles may have influenced its use. The fact that the word is often used in the singular confirms this. Thus we have in John Florio's "World of Words" (1598), "Novella, a Tale, a Newes." In the "Wit's Recreation," published in 1640, we have the following epigram:

When news doth come, if any would discuss
The letter of the word, resolved it thus:
News is conveyed by letter, word or mouth,
And come to us from north, east, west and south.

The little corps of the newspaper fraternity were then beginning work in England, and being tickled by the above epigram, had it put at the head of their paper as above stated.

Skeat says that news is not older than 1500, and cites Berner's translation of Froissart, "Desyrous to hear newes," and Surrey's translation of Virgil, "What news he brought." But at least one earlier instance is to be found in the "Siege of Rhodes," translated by John Kay and printed by Caxton about 1490.

Before closing we may state that some contend that the German neues is not a genitive, but the neuter nominative or accusative. We incline to think that it is a genitive, and the phrase: "Was giebts newes?" an exact equivalent of the Latin "Ecquid Novi?"—*Indianapolis News.*

JOHN JACOB ASTOR.

As He Appears Among His Less Fortunate Fellow-Mortals.

No figure is more familiar on Broadway than that of John Jacob Astor. Stripped of his wealth, an ordinary factor in affairs, his personality would attract attention. He stands tall, commanding in figure, portly-looking, rather like a prosperous English manufacturer than any thing else. He walks with a steady, sturdy, self-possessed manner, is recognized by hundreds every day, interchanges courteous recognition with all he knows in a gracious and comradic manner, conversing freely, pleasantly and with an utter absence of ceremony or pretense, and is open in no single direction, that I ever heard of, to the charge of purse-pride or self-conceit. The story of the Astors is trite and familiar.

There are just so many lots on Manhattan Island, and the man who had pre-science sufficient to understand that, sooner or later, every lot would be occupied, and that a great physical embarrassment would confront people then living, and had pluck and courage enough to indorse his conviction by his action, was obviously on the high road to unbounded prosperity. That man was John Jacob Astor, Sr. He impressed upon his sons the necessity, as well as the desirability, of adhering to a programme once laid down. Holding on with virile tenacity to property then owned, rarely if ever parting with any, constantly adding to its area, the Astors have, by normal growth of property values, become the wealthiest family in the country. As go the rentals of the Astors, of necessity follow the rentals of every other landlord in the city. A fortunate man is the present John Jacob Astor. Born to an inheritance, the hither verge of which, his mind, the mind of any living man, can not begin to understand, his shoulders early laden with vast financial and social responsibilities, he, by a simple honest adherence to the programme laid down by his grandfather, followed conscientiously by his father, sees his enormous properties increase and multiply as the years roll on, so that if mere aggregation of wealth is all there is to be desired, he, more than any living man, has his wish completely filled.—*Joseph Howard's Letter.*

SON OF PETER THE GREAT.

He Nearly Escaped His Awful Death but Was Betrayed by a Barber.

The death of the Czarewitch Alexis, son of Peter the Great, is one of the most tragical chapters in history; all the more tragical because the unhappy prince so nearly escaped his cruel fate. "It is impossible," says the historian Dutens, "to collect more authentic particulars in regard to the czarewitch than those which I received from a Russian noble intimately connected with Marshal Romanzoff, son of the general who was employed to arrest him. This noble informed me, that being at Schonbrunn on a visit to the count of that name, he conducted him to a small castle near at hand, and showed him the apartment in which Alexis had lived in concealment for a long time after he had been driven from his father's court. He also told me that the czar, according to Marshal Romanzoff, having resolved that his son should be brought back to Russia, and knowing that he was secluded in some part of the territories of the Emperor Charles VI, wrote to that sovereign, about 1717, to obtain his permission for Gen. Romanzoff to see his son, wherever he might be, and persuade him to return to his father's court, promising to use no compulsion if he refused.

"The emperor, who had daily expected this demand, had advised Prince Alexis to repair to Naples, furnishing him with a strong recommendation to the viceroy of that kingdom. So that when Gen. Romanzoff arrived to fulfill his commission, he was informed that the czarewitch was nowhere within the territories of the house of Austria. He then extorted from the emperor an order to all the governors of his Italian states to give facilities to the general for seeing Prince Alexis if he resided anywhere within the limits of their respective governments.

"With this order in his hand he traversed the Milanese and all Lombardy, and then passed into Naples, but everywhere the same answer met him, that no one knew the place of the prince's retirement.

"One day when Gen. Romanzoff was conversing in Russian with the members of his suite before a barber whose services he had engaged, the barber showed so much astonishment that the general asked him, in Italian, the reason. He replied that he did not understand a word of the language which the general had been using, but that the cause of his surprise was its resemblances to that spoken by a great oreign lord whom he often went to shave at the Castel del Novo.

"The general, much struck by his remark, continued to question the garrulous barber, and having made him some presents, learned that a young lord, whose person he described, was served with the greatest respect by numerous attendants, and led a very retired and secluded life in the Castel del Novo. From the details furnished by the barber, the general had not the slightest doubt that he was the czarewitch. He immediately repaired to the viceroy, and having shown him again the imperial order, and assured him of his conviction that Prince Alexis was at the Castel del Novo, obtained permission to see him, on the conditions specified in the czar's letter to the emperor. He had an interview with the unfortunate prince, who at first refused to proceed to St. Petersburg. The general, however, gave a handsome bribe to a woman who lived with the prince, and had much influence over him; and he was thus persuaded eventually to return to the Russian capital, where we know what destiny awaited him."—W. H. D. Adams in Gentleman's Magazine.

William Warren as Pillicoddy.

The John Peter Pillicoddy of Mr. Warren was almost worthy to be called a great creation. The old time farce, which has nearly been superseded by burlesque and extravaganza, had a real artistic reason for being. It had the same place in the drama that humorous character has in painting, and served a like purpose. Farce simply took a natural human feeling or habit, magnified or intensified it, and showed how amusing a man might be who was entirely under its control. Mr. Pillicoddy is a nursery gardener and a seedsman, a beautiful, perfect specimen of the small but prosperous English Philistine.

He is devotedly fond of his wife, who was the widow of a sea captain named O'Scuttle, and all his spirit is possessed by a dread that Mrs. Pillicoddy's "first," who was supposed to have been drowned at sea, may turn up and claim his spouse. His fear soon has something substantial to feed on, for a Capt. O'Scuttle does turn up and demand a wife, and the action is occupied simply with the display of Mr. Pillicoddy's emotions until he discovers that he is dealing with his predecessor's brother, and not with the predecessor himself. Absurd as the character is, it fairly glowed with life, as well as drollery, in Mr. Warren's hands.—Atlantic Monthly.

The Dog Had Fleas.

The irrepressible small boy lived in a fashionable boarding house, on Washington boulevard. Among the boarders was an old maid, whose many silly, girlish ways made her the object of much secret fun among the boarders. It was after a dull Sunday afternoon, when it was a trifle early to light the gas, and a momentary summons to supper was expected, that the lady, a couple of gentlemen and the aforesaid boy occupied one of the parlors. No one seemed willing to start a conversation, so, for the want of a better thought, the lady said to the graceful hound, on the rug before the grate: "Oh, Fanny, how I envy you your peaceful lot; no trials or cares!" The little boy sprang to the side of his favorite, and, looking up into the lady's face, blurted out: "I guess you wouldn't, if you had to have fleas!"—Chicago Herald.

If we did but half we are able to do we would be surprised at the sum of our diligence.

SATURDAY MARCH 16.....1889

A SOUTHERN CALIFORNIA VALLEY OF THE JORDAN.

[SOUTHERN CALIFORNIA PRACTITIONER.]

Two hundred miles almost due north of Los Angeles lies a valley unique even among the wonderfully varied valleys of the Pacific Coast.

Probably nowhere else in the world have the river and valley of the Jordan more nearly their parallel. It is the valley through which the Owens river makes it way southward to the lake of the same name. The country is known as the Owens River Valley.

A clear rushing stream of water, rising from the melting snows of the east slope of the Sierra, as the waters of the Jordan come down from the snow-clad summits of the mountains of Lebanon, walled in upon the west by the great uplifted line of the Sierra as the Jordan looks up to Tabor and Carmel, and the peaks of Samaria; on the east the long line of the Inyo mountains, as the Jordan has the Anti-Libanus and Hermon and the mountains of Gilead; west of each beyond the mountain crests the waters of the great sea; and eastward, and on, the mystery and hush of the great upland desert. Southward, the emptying place of each river, a lake so salt that the human body floats without effort upon the part of the swimmer.

The Owens River Valley has been almost a terra incognita even to Californians. Lying on the east side of the Sierra it has been cut off from the great currents of travel. The gold-seeker, the stockman, and the agriculturalist, each wandered far from its seclusion. Only occasionally a stray settler straggled over the high passes of the Sierra, or crossed the desert stretch which lay between it and Los Angeles, and made it his home. So in the course of years it gathered into its quiet lands a sparse population. And those who came remained. The charm of the land held them.

The editor had recently the pleasure of a meeting with Mr. Mulholland, editor and publisher of the INYO INDEPENDENT, and from him much of the following information was obtained.

Owens river has its source among the mountain lakes of the same great upland plateau of the Sierra in which Tahoe and Weber and Donner are found. It flows southwardly along the east base of the Sierra for a distance of some 150 miles, fed at intervals of four or five miles by small streams of snow-water from the white peaks above. At Independence, in the lowest stage of the dry season, the river measures sixty-five feet wide, an average depth of three and a half and a current of four miles per hour. Some miles below Independence it empties into Owens lake, a body of water about twelve miles by twenty in size, it waters so laden with saline matter, chiefly soda bi carbonate, that, as before stated, the swimmer floats with no effort of his own.

The valley, which is over one hundred miles in length, has an arable width of some ten miles, most of which can be irrigated. The soil is a warm, sandy loam, deep and fertile. The rainfall in the valley is about eight inches; in the mountains many times heavier, with depths of snow that never melt from year to year. Fogs are almost unknown. The winds are northerly or southerly but gentle. The norther is practically unknown. In elevation the valley is about 3,500 feet above the sea. Fruits, grains and vegetables of the temperate zone grow to perfection. Among the fruits may be classed the apple, peach, pear, cherry, currant. The potato seems especially suited to the climate and is produced in perfection. The vine in its product rivals the famous bunches of Eschol of that other Jordan beyond the waters of the great sea.

In summer the midday temperature sometimes reaches 104, by with the dry desert air which robs it of its peril and makes it not more oppressive than a temperature of 90 in most lands. The rapid radiation of heat characteristic of elevated regions and desert climates makes the summer night cool and refreshing. In winter the mercury occasionally drops to 30 degrees above zero, or 2 degrees below the freezing point. Snow seldom falls in the valley. In the mountains it is very heavy.

But the glory of the land is in its mountains. On the east lies the Inyo range, some 8,000 to 10,000 feet high, walling in the valley from that desert plateau which reaches on and on over hundreds of miles of mesa and plain to the Grand Canyon of the Colorado. In that plain, east of the mountains, lies the long depression of Death Valley, 150 feet below sea-level. These mountains are timbered with pine and juniper.

On the west, from its great height apparently almost overhanging the country, lifts the long wall of the Sierra. This portion of the Sierra may well be called the Alps of America. Here the range widens out into a clustering of tall peaks, and for a distance of 200 miles has a breadth of some 70 miles, with summits rising to elevations of from 12,000 to 15,000 feet. Mt. Whitney, at 15,080 feet, stands as the highest peak in the United States. Among other well known peaks may be mentioned King, Brewer Tyndall and Williamson, grouped about Whitney. Out of this cluster of mountains flow the head-waters of Kern, Tule and King rivers on the west, while, as before stated, Owens river drains the easterly slope. The mountains are densely covered with great pine forests, broken here and there by deep snow water lakes of varying size. These, and the mountain streams flowing from them, are filled with trout, affording the finest fishing The pine openings are the home of deer and other mountain game, making with the cool bracing air, the pure snow water, and the shelter of the pines, a veritable hunter's paradise.

* * * The peculiar combination of a dry desert air from the inland plateau, the upland pine forests with their balsam-laden atmosphere, cool mountain lakes and streams, fishing and hunting haunts which as yet have scarcely known the foot of sportsman, together with a choice of elevations ranging from 3,500 to 15,000 feet above the sea, makes a possible health and pleasure resort unequalled upon the continent, possibly unequalled in the world. Its one drawback, isolation will soon be removed by the building of a road to connect with Los Angeles. With that road built ten hours' ride from Los Angeles opens it up to the tourist, the invalid, or the pleasure seeker. It will furnish to California the one thing it has lacked, the forests and Lakes of the high Sierra, and a few years will dot the mountain slopes with hotels for invalids and tourists. Then with its seasides, its channel islands, its ocean plains, and its high Sierra, one can hardly imagine anything more for Southern California to add to its list of natural attractions. * * *

How Chinese History Is Written.

Chinese history is compiled by a permanent commission of accomplished literary men, who are always at work upon it. In 1737 an imperial edict stated that history ought not to be written for the emperor's use only, and remain shut up in golden caskets and marble chambers; it ought to be made accessible to all officials, that they may know the mind of the emperors and the laws of the land. From the Chinese standpoint, history is divided into two parts—one an exact narrative of events, the other a record of what the emperor has said and done. This division originates two sets of publications; one in which the officers speak, the other in which the emperor is the spokesman. In the first, the industry of the bureau of history is run in the collection of facts, but there is always a danger that the recorder may be under a strong court influence. Historical candor can scarcely find a place in reference to nations or persons who have been in conflict with the court. With this exception, the array of facts thus recorded is most valuable.

The edicts published in the second series express the mind of the emperor. He is always a man who has the advantage of good training, and if his style is tolerable and he happens to be fond of writing his edicts himself, they will all be transmitted to future times in full. The scribes, who stand writing when he speaks, translate his spoken words into official phrases, and his opinions and decisions will then pass into official history, written partly by himself and partly by the scribes of the cabinet. Besides these there are various series of historical works—the first having been prepared in the Eleventh century—to popularize the subject and place the chief facts of the Chinese annals within the reach of common readers, who have not the opportunity to study them in full. The last of these has just been published. It deals with the reign of Kienlung, from 1736 to to 1795, and is in sixty volumes. Every important public matter is recorded under the day on which it occurred. The emperor has, as usual, the lion's share of the talking, and there is room for him to say a good deal in 120 chapters.—North China Herald.

The Cat and the Dog.

The mastery of herself which a cat shows when, having been caught in a position from which there is no escape, she calmly sits down to face out the threats of a dog, is a marvelous thing. Everybody has seen a kitten on a street door-step attacked by a dog ten times her size, as apparently self possessed as if she were in her mistress' lap. If she turns tail and runs down the street she is lost; the dog will have a sure advantage of her. Even as it is, if he could get up courage enough to seize her on the spot he would be able to make short work of her. It is a case of life and death; but the whole air and attitude of the cat is one of pure and confident bravado. "You dare not touch me, and you know it," is what her position tells the dog.

But she is intensely on her guard, in spite of her air of perfect content. Her legs, concealed under her fur, are ready for a spring; her claws are unsheathed, her eyes never move for an instant from the dog; as he bounds wildly from side to side, barking with comical fury, those glittering eyes of hers follow him with the keenest scrutiny. If he plucks up his courage to grab her, she is ready; she will sell her life dearly. She is watching her chance, and she does not miss it. The dog tries Fabian tactics, and withdraws a few feet, settling down upon his forepaws growling ferociously as he does so. Just then the sound of a dog's bark in the next street attracts his eyes and ears for a moment; and when he looks back the kitten is gone! He looks down the street and starts wildly in that direction, and reaches a high board fence just as a cat's tail—a monstrous tail for such a little cat—is vanishing over the top of it. He is beaten; the cat showed not only more courage than he had, but a great deal more generalship.—Boston Transcript "Listener."

Poison of Expired Air.

Recently two distinguished French physicians, Brown-Sequard and D'Arsonval, have been experimenting, and have obtained results which are thought to prove that expired air contains another poison, additional to those of carbonic acid and ammonia, to which mainly the dangerous nature of expired air must be referred. The exact nature of this poison has not yet been ascertained, but the experiments cannot be due either to carbonic acid or to ammonia.

By passing expired air, whether of human beings or of animals, through water, a solution was obtained which, injected into the veins of animals, invariably gave rise to the same symptoms—a slower breath, a rapid lowering of the temperature, a considerable paralytic weakness, especially of the hinder limbs, and, after three or four days, a morbid activity of the heart.

Larger injections induced excessive contraction of the pupils, increased paralysis, and a diarrhœa, something like that of cholera. The eminent surgeons who conducted these experiments are disposed to regard pulmonary consumption as largely due to this poison. If future experiments should establish this view, it must greatly emphasize the supreme importance of thorough ventilation in our homes and churches and all places for public gatherings.—Youth's Companion.

The American "Tough."

The tough is a product peculiar to American city life. In other countries, of course, you will find the rough and the cad and the brutal coster, but it is only in an American city that you will find the tough. In other lands the man who comes nearest to the tough is but a subject, and a very poor one at that, and he is constantly more or less in dread of a superior governing power. In America the tough is a citizen, or at least claims to be one, and he feels not only the equal of everybody else, but the superior of everybody else, and he has a profound scorn and contempt for all processes of law. The tough is a terror, and there is no reason why he should escape whipping. Arrest or imprisonment he fears not, but a good dose of the cat-o'-nine-tails might bring him to reflect on the error of his ways.—Boston Home Journal.

Their Bearskin Hats.

The London Foot guards are troubled over the threatened abolishment of their showy bearskin hats, which are worn at present by three of their brigades. The supply of bearskin has diminished exceedingly of late, so that now each hat is worth about $38. These bearskins are practically useless, except for the purposes of display, and are even then only suited for cold climates. But they are highly cherished by the soldiers on account of their imposing appearance.—Philadelphia Times.

Suggestion for Railway Companies.

The Boston Transcript wants to know why railway companies do not hang up in several prominent places in stations a plainly printed list of fares to different places. This would save a great deal of time, as many passengers could have the exact amount of money ready. In fact, in large stations like those in this city, a money changing office in addition to the ticket office might be established, so that people could provide themselves with the exact change if they did not have it.—New York Tribune.

Patti and the Burglar.

It is said that shortly before Mme. Patti left Wales for her South American tour she had a thrilling experience with a burglar. The songstress was alone in her chamber preparing to retire for the night, when she heard a sound in an adjoining room, as if some one were moving about. Patti hastily donned a wrapper and walked boldly into the room from which the sounds came, and stood face to face with a gigantic burglar. He wore a mask to conceal his features, and in his hand he carried a heavy club. The plucky woman asked him what he was doing there.

"Don't you see," he replied in a broad Welsh dialect, "I am stealing your diamonds?"

And he held up to her astonished eyes the most beautiful bracelet which she possessed. Patti did not scream. She simply walked across the room, pressed an electric button to summon the servant. Instead of the servant, however, Signor Nicolini appeared on the scene. The burglar attempted to strike him with his club, but his game was frustrated by Patti. She grasped the club as it was raised in the air. Nicolini and the burglar then clinched, and in the struggle that ensued the enterprising but altogether too candid thief was pitched out of a second story window. He descended gracefully and broke a leg. He was found to be a peasant whom Patti had frequently befriended.—London Cor. New York Press.

Rats on Board Ship.

"We can always tell," said a West India captain, speaking of the plague of rats in port now, "when we have a few or many of the pests on board. The rats do not, as one would suppose, remain on the ship, but they get off at various ports, and, after remaining awhile, ship on some other vessel for another voyage. The water rats, or wharf rats, are great travelers, and make frequent voyages around the world. There are here now rats from almost every part of the globe. Why, I saw four colossal Jamaica rats, with their white bellies, skipping about in the moonlight the other night, and yesterday I killed two Indian male rats on my vessel.

"Rats are great climbers when they find it necessary to do so. Upon one of my voyages not long ago we had a long spell of warm weather, and there was no water in the hold which the small army of rats on board could get at. One night we put some water up at the cross trees and waited for the results. Well, the rats just swarmed up the rattlings and went for that water. We killed as many of them as we could as they came down, and some of them jumped overboard and were drowned. But we could not kill them all, and a few made the entire voyage with us."—Philadelphia Record.

Fashions in Handwriting.

There are fashions in everything nowadays. The latest is in handwriting. At least, I see that an instructor in that art advertises at a stylish stationer's that he will impart to our aristocracy, and I presume any one else who can pay for instruction, the latest styles of fashionable caligraphy. It used to be charged against the old fashioned writing master that his method of instruction deprived the pupil of all individuality in the use of the pen. The writing master taught writing after the fashion of a copperplate. The newer style insists on an equal suppression of individuality without the compensation of elegance. The thing in handwriting now is apparently to make it as illegible as possible. The extent to which the people succeed is certainly a credit to the master.—John Preston Beecher in New York News.

WANTED

About 60 head of young cattle to handle on shares. I have excellent summer range and the best of winter feed. The stock will be well attended to. A graded bull from Mr. Hunter's thoroughbred Durham will be turned with the band. For particulars apply to JAMES JENKINS,
3-2 Lone Pine.

SCIENTIFIC AMERICAN
ESTABLISHED 1845.

Is the oldest and most popular scientific and mechanical paper published and has the largest circulation of any paper of its class in the world. Fully illustrated. Best class of Wood Engravings. Published weekly. Send for specimen copy. Price $3 a year. Four months' trial, $1. MUNN & CO., PUBLISHERS, 361 Broadway, N.Y.

ARCHITECTS & BUILDERS Edition of Scientific American.

A great success. Each issue contains colored lithographic plates of country and city residences or public buildings. Numerous engravings and full plans and specifications for the use of such as contemplate building. Price $2.50 a year, 25 cts. a copy. MUNN & CO., PUBLISHERS.

PATENTS may be secured by applying to MUNN & CO., who have had over 40 years' experience and have made over 100,000 applications for American and Foreign patents. Send for Handbook. Correspondence strictly confidential.

TRADE MARKS.

In case your mark is not registered in the Patent Office, apply to MUNN & CO., and procure immediate protection. Send for Handbook.

COPYRIGHTS for books, charts, maps, etc., quickly procured. Address

Mr. McIver has bought some large work horses from W. S. Enos for use on the Eastside canal.

Elder Scovil will hold religious services in Mairs' Hall on Sunday evening. Everybody invited to attend.

A good offer for beef cattle has been received by W. K. Miller, of Lone Pine, from parties at Los Angeles.

Louis Munzinger, the popular brewer of Bishop, was in town this week. Louie says "Times ish dull, pi Gott."

Captain Ericson, the word famous engineer and designer of the celebrated Monitor, died at New York this week aged 86 years.

The 17th of Ireland ball at Keeler next Monday eve will be immense. Don't forget to get your best girl plenty of green ribbon.

The Reading Iron Works has failed for a million dollars. This was one of the largest establishments of the kind on the continent.

"Jock, when ye hae nuthing else to do ye may be aye sticking in a tree; it will be growing, Jock, when ye're sleeping."—*Sir Walter Scott.*

G. H. Palmer and Louis Padillo, of Lone Pine, have been in town during the week. They were subpoenaed as witnesses in the Munzinger divorce case.

The Indian who killed Louis Sammann at Mono Lake has been examined and committed for murder. The date of his trial in the Superior Court has not yet been set.

The small-pox scare is increasing at Hawthorne. The citizens of Bodie have taken precautionary measures to prevent the further spread of the disease to that place.

Bishop has three big teams on the road to Mojave; Big Pine and Independence have teams making regular trips. What is the matter with Lone Pine starting a team?

Mr. L. A. Anger has received the artesian well tubing and hauled it to the place where the well will be sunk. Active operations will be commenced next Tuesday morning.

Mr. C. A. Levy, of Bishop, is at Los Angeles purchasing goods to be shipped to the former place. The merchandise will be shipped by rail to Mojave and hauled from there by teams.

Gus. McGovern is on his way to Mojave with a ten horse team after a load of merchandise for Bishop. A team belonging to H. H. Spear will leave Bisop on Monday for Mojave, also for freight.

The weather during the week has been cloudy and considerable rain has fallen. The canyons are filled with new snow, which will make plenty of early water. The storm still continues.

The will of James C. Flood has been filed for probate. One half of his property is left to his wife and the other half to his son and daughter in equal shares. The estate is valued at $2,400,000.

Two windmills were raised last Monday on land belonging to John White, of San Francisco, near Citrus. The mills are intended to pump water upon land lying above the Eastside canal.

J. E. Shepherd, Past Master of the Native Sons, Mt. Whitney Parlor, has been elected a delegate to the Grand Parlor, which will meet in San Rafael on the 15th of next month.

Cheered by the presence of God I will do at the moment, without anxiety, according to the strength which He shall give me, the work that His providence assigns me I will leave the rest; it is not my affair. —*Fenelon.*

There is one one thing worse than ignorance, and that is conceit. Of all intractable fools, an over-wise man is the worst. You may cause idiots to philosophize, you may coax donkeys to forego thistles, but don't ever think of driving common sense into the head of a conceited person.—*Arnold.*

Messrs Compton and Best have gone to Bishop and after remaining there a few days they will return to Independence and Lone Pine. The young men express themselves as being very agreeably surprised at the extent of the valley and of its great possibilities. Upon their report depends whether or not a number of families will come here to settle.

THE SITUATION.

The matter of railroad extension is a question of the most vital importance to the people of this county. At no time since the valley was settled has money been so scarce as now. The reason of this is patent to all. If water is being continually taken out of a bucket and none put in the bottom will certainly be found. The railroad for six years past has been draining the valley of its currency. The balance of trade during the entire time has been against us. That this is so is not the wilful perversity of the railroad management but is the result of circumstance. The rates of freight are high because the distance hauled is great and the amount of freight comparatively small. This high rate naturally precludes the possibility of exporting any of our farm productions, while the necessaries of life we must have and every available dollar is required to pay for them. As stated, this is due to natural causes, not to malicious persecution. But this being the fact does not alter our condition. The sole return to the county has been from the mines and as a consequence the portion of the valley farthest removed from the mining region felt the depression soonest. The initial move was made at Bishop and united action has followed throughout the valley. The action of our citizens is not vindictive, but is solely the result of circumstance. The matter is brought before the people and conned over in every light. There is no money left to pay for freight by the railroad, but we have teams to haul it and hay and grain to feed the teams. Actual necessaries we must have and consequently our imports are brought overland from Mojave. The next consideration is that Los Angeles is much nearer to Mojave than is San Francisco and freight to that point is consequently less. A further consideration was whether or not goods could be bought as cheaply in Los Angeles as in San Francisco. As in all great changes the matter of withdrawing trade from one central point and transferring it to another is attendant with many difficulties. The exigencies of business require that an extensive credit system should be carried. The San Francisco parties to whom large sums may be owing naturally use every effort to retain a valuable trade and will enforce the purchase of goods there. Merchants who may thus be forced to trade in San Francisco will of course discourage others from purchasing at a cheaper place. This evil, however, will be overcome by a proper effort on the part of Los Angeles business houses Every person in the valley who has no forced connection with San Francisco realizes the fact that Los Angeles is our natural outlet and will endeavor to secure close connection with that point. The following extract is from a private letter: "Yesterday afternoon I took C. A. Levy around to a few wholesale houses. You never saw anyone more surprised, he had not the remotest idea of the business of Los Angeles, nor of the stock carried by merchants. He says there is nothing in San Francisco that exceeds some of the houses here." And again: "I met Rudolf Schober yesterday afternoon. He is highly pleased with the way the merchants here have treated him." That Los Angeles will be our market both for imports and exports no reasonable person can help but believe. What is most desired, and what we will ultimately have, is railroad extension to Mojave. But in the mean time teaming will perforce be continued until such road is built. Some time since we were told that Mr. Yerington had said positively that the C. & C. would not be extended to Mojave; that it was not even considered; that he had no intention of going to Los Angeles. Whether there was any authority for such a statement we do not know; but the fact is that Mr. Yerington is now at Los Angeles, having arrived there near the date mentioned about a month ago. He is conferring with the business men of Los Angeles in regard to extending the road. The following article appeared editorially in the *Herald* of the 9th inst., Mr. Yerington having arrived in Los Angeles since that date.

"Mr. C. Mulholland, who has been here for some time in the interest of securing railroad connection between Inyo and Los Angeles via Mojave, has received a letter from Mr. H. M. Yerington, President of the Carson and Colorado Railroad, in which he says that he will pay a visit to our city in about ten days. His visit will doubtless result in giving him a favorable impression of the proposition to extend his road. He will see that there is a business traffic to be developed here that would be very advantageous to his company. Mojave is within one hundred and twenty miles of Keeler, the terminus of the C. & C. At present nearly all of that portion of California on the other side of the mountains as well as the southwestern portion of Nevada, would trade with Los Angeles were it accessible by rail. We have no doubt that when Mr. Yerington sees what an immense trade his road can develop when it has an outlet here, he will favor the extension. A leading merchant of Inyo is here now buying goods, and will send out ten tons of merchandise to Mojave, where he has teams to haul it to the valley. This shows the trend of the Inyo trade and the value of the proposed railroad extension."

Grand Ball

Mr. and Mrs. John Barnes will give their fifth annual ball at the Lake View Hotel, Keeler, on Monday evening next. When the new hotel was built four years ago it was opened with a house warming on the 22d of February. The party was so successful that on the 17th of March of the following year a ball was given, the new store of John Fehmer being used as a ball room. The 14th of February, St. Valentine's Day, was celebrated the year following. Last year a new lodging house was erected to meet the increasing demand for rooms, and was used to dance in, the partitions not being placed. This year further improvements have been made and the large dining room will be used as a ballroom. Those who attended on previous occasions will remember what a good time was enjoyed, and this year will be no exception to the rule. The unfailing courtesy of Mr. and Mrs. Barnes will render the ball a most pleasant affair.

Death of a Centenarian.

Domingo Santivañes died at Lone Pine last Saturday. He was the oldest man in the county, his age being about one hundred years. He served in the Revolution of Chili in 1810 and was past the meridian of life when he came to Inyo county many years ago. For a long time past he has worked as a gardener for the Diaz family at Lone Pine and is currently reported to have left a considerable sum of money hidden somewhere. This, however, is unworthy of credence. The funeral obsequies took place on Sunday afternoon, a large concourse of citizens following the remains to the grave, where the funeral address was delivered in an impressive manner by G. H. Palmer. The deceased leaves a son, a young man, to mourn his death.

COURT NOTES

The case of Munzinger vs Munzinger, suit for divorce on the ground of desertion and adultery, was called in the Superior Court last Tuesday morning. Messrs. Laird and Gill appeared for plaintiff and A. R. Conklin Esq. for defendant. Plaintiff testified that defendant deserted him in 1875. Geo. H. Palmer was called by plaintiff and testified in the case. J. W. P. Laird testified on behalf of plaintiff. L. Padillo and M. Castro were called by plaintiff and testified to Mrs. Munzinger and M. Montaña occupying the same house at Lone Pine and at Beveridge. Further testimony was taken on Thursday and the following witnesses were examined on behalf of plaintiff: E. H. Edwards, J. J. Stewart, B. Lasky and H. Lehman. Paul Myrtengreen was called by defendant. Argument of counsel was set for Monday at 10 o'clock a. m.

I. O. O. F.

By an arrangement between the Odd Fellows' Lodges of Bishop and Independence a grand anniversary celebration will be held at each place on alternate years. Last year quite a number of the members of the Independence lodge went to Bishop, who state that it will be their endeavor to render their ball here on the 26th of April as nearly successful as the affair at Bishop last year as possible. They seem to think that a better time could not be had. The Bishop lodge will be well represented.

Tourists

Whether on pleasure bent or business, should take on every trip a bottle of Syrup of Figs, as it acts most pleasantly and effectually on the kidneys, liver and bowels, preventing fevers, headaches, and other forms of sickness. For sale in 50c and $1.00 bottles by all leading druggists.

The effort in the State Legislature to effect a repeal of the stock license was unsuccessful. No change was made in the present powers of Boards of Supervisors, consequently the sheep license in this county will remain the same as it was last year.

Mr. and Mrs. George T. Mills, Mr. and Mrs. T. R. Hofer and Mr. J. A. Ryan, of Carson, are making a pleasure trip through the valley. They came to Independence on Thursday morning and remained a couple of days. The gentlemen are interested in the Eastside canal.

Mr. and Mrs. H. M. Yerington and son and Miss Bronston left on Saturday night's train for Los Angeles. Mr. Yerington went to Los Angeles in response to an invitation of the Chamber of Commerce of that place, to meet with them yesterday [Monday].—*Enterprise.*

Election Notice.

SCHOOL TAX

NOTICE IS HEREBY GIVEN TO THE qualified electors of Fish Springs School District, County of Inyo, State of California, that an election will be held on the 30th day of March, A. D. 1889, at which will be submitted the question of voting a tax to build and furnish a school house, and for incidental expenses. It will be necessary to raise for this purpose the sum of $400. The polls will be open at the building occupied as a school house from one hour after sunrise till sunset. The Judges appointed to conduct the election are O. H. P. Love, James Lane and James McCarty.

ALLEN GRAY;

— OR, —

The Mys'ery of Tur'ey's Point.

Being a Few Romantic Chapters From the Life of a Country Editor.

BY JOHN R. MUSICK,

AUTHOR OF "WALTER BROWNFIELD," "HELEN LAKEMAN," "BANKER OF BEDFORD," AND OTHER STORIES.

[*Copyrighted, 1888, by the A. N. Kellogg News paper Company.*]

CHAPTER II.

THE NEW EDITOR'S TRIALS—A MYSTERIOUS SUBSCRIBER.

Allen Gray had done all that under the circumstances could be done to make the first issue of the *Western Republic* bright, spicy and newsy. He was now to realize that an editor's trials were not all before the issue of his paper. Toby, the carrier, went out to deliver the paper to the people in the immediate vicinity of the office. He was as faithful in the performance of his duty as the average carrier on his first trip; but he had not returned half an hour before Mr. Scott, another capitalist in the town, who had given five dollars to have the paper established, and in addition subscribed for one copy, burst into the office, his face dark as a thunder-cloud. In a voice of repressed anger he cried:

"Why didn't you send me a paper? Your confounded boy went right by my store an' never said turkey. If this is the way I'm to be treated I want my money back."

Allen, a little confused at the angry merchant, tried to mollify him, and hoped it would never occur again.

"It's his first trip, Mr. Scott; I assure you he will learn better soon. The boy overlooked you."

"Humph! overlooked me, did he? I suppose I'm an insignificant sort of feller to be overlooked by a ragged, bare-footed, stub-toed printer's devil, am I?"

Allen learned the folly of telling men they had been forgotten. One does not wish to seem so unimportant as to be forgotten, and to forget one is at best a lame excuse. Allen assured the merchant it should never occur again, gave him two copies and promised him a personal mention in his next issue. The new editor was in the midst of an article when Mr. Cross, the produce and grocery man, came in with a paper in his hand and fury in his eyes.

"See here," he roared, in a voice like an angry bull, "you've made a thunderin' blunder in our ad."

"What is it?"

"Don't you see you've spelt eggs with two *g's*?" said the backwoods merchant.

"Well, isn't that correct?"

"No, it's not. If you don't know how to spell you'd better quit tryin' to run a newspaper. I looked at a label which came on one o' my boxes from St. Louis, and eggs was spelt with one 'g.'"

"The label was wrong; here is the way Webster spells it." And Allen turned to his dictionary. The grocer stood scratching his head and swore that either Webster or the man who made out the label was wrong.

"That ain't all neither, the ad's wrong," he added.

"In what respect? Let me see the advertisement," said Allen, almost out of patience. He took the paper and read: "'*The highest prices paid for eggs, butter and poultry at the cheap gr cery store of Cross Brothers.*' What is wrong about that?"

"I don't want no poultry."

"You certainly said so."

"I jest wanted to buy chickens."

"Well, are not chickens poultry?"

"O' course they are, but poultry means more. It means geese an' ducks an' turkeys an' pigeons. I only want chickens. Besides, you had the ad way down there in a corner where no un'll ever see it. Can't you put it in the center o' the first page?"

"No, it would destroy the beauty of that page," said the editor, "but I will change it next week to suit you, and send you a proof of it; your ad shall have a good position."

It would be difficult to say whether Allen was most amused or disgusted at the ignorance of some of these backwoods business men. Ere long he thought he began to see some of the causes of the downfall of Turley's Point.

Again the editor was busy with his article, when the door opened once more, and an old farmer, wearing a broad-brimmed hat, entered the office.

"Why didn't ye git in that piece about my boy killin' the big rattlesnake?" he asked, somewhat viciously.

"It was unavoidably crowded out," said Allen, getting out of patience. "Send in your communications earlier in the week."

"Crowded out, an' that snake such a whopper!" cried the irate old man. "If yer gwine to 'low important items like that to slip, an' fill up yer paper with cookin' receipts, an' furren news about Congress, ye'll play out pr'ty soon, I'm thinkin," and the old gentleman, in no very amiable mood, turned about and left the office.

It is not a very great exaggeration to say that by evening on the day after the first issue of the *Western Republic* the editor felt very much inclined to commit suicide. After a few days he learned not to worry at the follies of some people, and, besides, those who annoyed him most were greatly in the minority. By catering to the vanity of the few who are ambitious to have their names in print, he preserved their favor, and did not injure his circulation. Those who were offended at being forgotten became good natured on being remembered. The more sensible offered words of encouragement to the new editor and hoped he would succeed. The second issue had a short essay from Miss Hopkins, and a shorter poem from Toney Barnes.

Allen was hard at work on the third issue when Tom Simmons again dropped in on him with a serious look on his face.

"I say, Mr. Gray, isn't it about time you were beginnin' to shoot some fire darts into the enemy's camp?" he asked.

"What do you mean, Mr. Simmons?" the editor asked.

"Isn't it time you war lettin' the enemy know ye war here? That is, come out, show yer colors an' fire away on 'em. Give the Democrats fits. Hold 'em up to contempt and say something smart about me, ye know; that I'd make a good member of the Legislature."

"I fear it's a little too early for that. It would certainly endanger your cause."

"D'ye think it raley would?"

"I know it."

"Then don't by any means hint such a thing."

By promising to act fair in the future he disposed of the politician for the time being. But he was scarcely gone before Mr. George Strong entered to caution him not to be too intimate with Tom Simmons.

"He's got no standin' here, an'll ruin any business. By the way, Mr. Gray," he added, in an undertone, "it's a good bit off yet, but next election I've 'bout made up my mind to run for sheriff on the Dimeratic ticket. I expect the *Western Republic* to support me."

Allen Gray found himself liable to get in a position which politicians term riding two horses going in different directions at the same time. Could he support a Republican for the Legislature and a Democrat for sheriff? But he told his Democratic friend, as he had advised his Republican friend, to wait future developments. Mr. Strong smiled and said may be it was best, but took occasion to remark that of course he would not have donated a cent had he not felt assured that the paper would come to his aid in the hour of need. With jealous politicians, unskilled business advertisers and rival poets, the new editor found himself getting into serious complications.

When Strong was gone, Toney Barnes, who had been walking back and forth in front of the office window, casting anxious looks inside for the last half hour, entered.

"Well, what is it?" Allen asked, fearing another volley of MS.

"Wasn't that an awful piece Miss Hopkins had in the paper last week about love. I'd be ashamed to write any thing like it."

"Oh, it was pretty fair."

"D'you think so? Well, that may do, but I'd advise you to have nothing to do with Miss Hopkins' writings. She can't write any thing that will be acceptable with the public. If you want essays or stories, I'll write 'em for you; but she will be sure to ruin the paper."

Next day, as Allen was in the midst of news items concerning the wreck of a steamer, he was aware of some one entering his office. He looked up and discovered Miss Hopkins, the old maid school teacher, and Toney's rival as a poet.

"I just thought I would call in, Mr. Gray," she said, smiling carefully, lest she should lose her false teeth, "an' bring you some poetry. I see you had one of the effusions of Mr. Barnes' in your last issue, and I concluded that if you was in such a strait for poetry I would bring you some myself."

The editor felt bad. He assured her that he really had no occasion for poetry, but sometimes inserted a few lines if the verses were short.

"Mine are very short and so quaint."

"What is the subject?"

"It is an ode to a bat found dead in a garret."

Allen thought of all subjects on earth a dead bat would be least calculated to inspire one with poetic thought.

"Shall I read it?" she asked. She was a lady and he could not refuse to listen, so she read:

"'You feathery, leathery, ungainly bat,
Still round the room and fly in my hat,
Or haste to escape at the door.

You amuse the boys, you frighten the cat,
But now you are dead, poor bat,
Lying on the floor.
None make your shroud
None shed a tear,
Unfortunate bat,
Over your bier.

"'No tears be shed at this sad tale,
So by its wing upon this nail
I'll hang it. Only a bat,
Hang on the wall
For folks to look at,
And that's all.'"

This poetic effusion had the merit of brievity, and the editor thought he might have room for it.

"I think I will soon begin a serial story in the *Western Rembbic*," said Miss Hopkins. Suppressing a groan, the editor asked her the title.

"'*The Ghost of the Rock House on the Hill-Top*.'"

The answer brought to the mind of the editor the mysterious house on the hill, and he asked Miss Hopkins if she knew any thing of the people who inhabited it.

"Not much," she answered; "they've been there some months, and no one knows their names. Some say that the man is a

"I WANT TO SUBSCRIBE FOR YOUR PAPER."

brigand, some that he is an ex-pirate, others that he is connected with a gang of counterfeiters or horse-thieves."

"How many have they in the family?"

"I don't know. There was a white-faced woman once seen at the window, but some one pulled her back. A few weeks ago a report went about that a pretty girl had been seen through a crack in the old garden wall, but the tall man with long black whiskers came out, and in a voice of thunder drove her to the house, and the young fellow who saw her ran away."

This gossipy old maid furnished him much news and information. Her poetic effusion was of no value, but she unconsciously gave him many items which he, unseen, noted on his memorandum book.

One evening Allen was working late in the office reading proof. All hands, save Toby, who remained to sweep, had gone home. A tall man with long black whiskers and gray eyes entered the office. His manner was so singular as to strike the new editor with surprise. His bearing indicated that he belonged to a different sphere than Turley's Point.

"I want to subscribe for your paper," he said, in a deep, mysterious voice. "What is the subscription price for a year?"

"One dollar and fifty cents." The tall foreign-looking man threw the money on the table. "What is the name and address?" Allen asked, opening his subscription book.

"Send it to X. Y. Z., post-office box 141," answered the tall stranger, and then, without another word, stalked away from the office.

"Who is that man, Toby?" the astounded editor asked, watching the receding form through the window.

"I don't know—nobody knows," Toby answered. "He's the mysterious man who lives in the big house on the hill."

CHAPTER III.

SOME DIABOLICAL VEISE—POLITICAL AMBITIONS.

Allen sprang to his feet and hastened to the door. Twilight shades were deepening into darkness, yet he could distinguish the outline of the tall man hurrying up the hillside road. There was something so fascinating in the mystery surrounding the stranger that Allen felt a strong inclination to follow and learn more of him.

"Toby, were you ever in that stone house on the hill?" he asked.

"No, sir," Toby answered.

"What do you know about it?"

"Nuthin' much," was the evasive response.

"Does he often come to the village?"

"No."

"Well, if you know any thing about those people tell it to me."

Toby shrugged his shoulders, cast an uneasy look about him, and said:

"'Taint much I know, and 'taint much I want to know."

"Tell me just what you do know, and all that you've heard of it."

"I've been to the house two or three times," said Toby, in an awe-inspiring whisper. "But thar's a great high wall all round it, so one can't see inside. Tommy Miles once peeped through the back-yard wall, and says he saw the prettiest girl he ever set eyes on in his life. People say they kill folks up at that big house."

"When was the house built?" asked Allen, hoping to bring the boy back from speculation, to answer facts.

"I dune," Toby answered. "'Twas long afore I was born."

"Do you know who built it?"

"No. I've heerd ma say it was built by some rich people who lived there long ago, and then left."

"How long have these people lived here, Toby?"

"It's only been a few months since they come back the last time. They wont hev nothin' to do with us, an' we'uns don't hev nothin' to do with 'em."

"Where did they come from?"

"No 'un knows. The house had been vacant, except two old people stayed there and kinder tuk keer o' it. The man was cross an' wouldn't talk nuthin' but French, an' the old woman was deaf and dumb. The boys used to try to git in the orchard, but the old feller came out with a gun an' swore in furren language at 'em, an' skeered 'em so bad they wouldn't go nigh it. Then thar's been some awful sights seen thar o' nights," concluded Toby, shuddering.

"What were they?"

"Well, Tommy Miles said he hoped he might drop dead if 'twasn't so. He was comin' home through the woods one night, an' thought he'd risk comin' by the rock house. When he got nigh it, he heard a awful sercamin' jist like some one was bein' killed, an every winder in the house was a great blaze o' light. He said he'd swear he saw a woman standin' at a winder with wings jist ready to fly when some un pulled her back. Then old Dobbs went by there one night an' saw the blinds an' curtains all ablaze like, an' people flyin' around the ceilin'."

"Who is this man Dobbs?"

"He's an old feller who lives out in the country on a farm."

"Does he drink?"

"Like a fish."

"I guess he had been drinking that day, which accounts for his seeing the wonderful sights at the old house."

"He says 'twas spirits," said Toby.

"Doubtless it was; but the spirits he drank before leaving town."

"Thar's others who've seen strange sights up thar, Mr. Gray," returned Toby, after a few moments' pause.

"There is some deep mystery about the house and people who live there, but when once understood you will find nothing supernatural about it. Why do people here object to talking about that old house on the hill?"

"Cos it's haunted," said Toby, with a shudder, "an' it drives people away from the Pint. Every body says if it hadn't a been fur that old house on the hill we'd a had a boom here long ago."

Allen dismissed Toby for the day, locked the office and went to his boarding-house, his mind full of the strange mystery of which he could learn so little.

Next day Toney Barnes entered with a smile on his face, and a bundle of manuscript under his arm. With an air of triumph, he said:

"Just let me read you what I've got here."

"I am pressed for time, Mr. Barnes," pleaded the editor. "Leave it and let me read it at my leisure."

"Oh, no, it will not take long," replied Toney, with a commanding smile.

"But you don't intend reading all that to me?"

"It won't take long."

"My time is very precious now. Every hour I lose this morning must be taken from my sleep to-night."

It was useless to expostulate. A country editor can not, like the city editor, send a clerk or office boy to talk with the ambitious author who is bold enough to invade his sanctum. He usually is so unfortunate as to be acquainted with the literary aspirant, and escape from a personal interview is impossible. Toney Barnes was certain the editor would not discover the beauty in his poetry unless the author read it himself, and gave it the proper elocutionary embellishments. It was no use to argue that he could not read it to every body, and that newspaper poetry is to be read and not heard; he was determined, and Allen was forced to listen.

"There are several pieces here," said the poet, with a cruel smile. "Let me see which I will read first."

Allen had no choice, and at last the author seemed to have found one that suited for a beginning, and, spreading it out on his knee, said:

"I will now read you 'something on spring."

A spring poem usually makes the experienced editor desperate. Country editors, especially, have a horror of spring poetry. But Toney, like all other poets, having no regard for other people's nerves, began:

"Those beauteous, sunny days have come,
The gladdest of the year,
When verdant nature strews the earth
With wild abundant cheer.
Remain, oh lovely days, remain
With all your plenteous peace,
And may your roses and cauliflowers
And song birds never cease."

"How do you like that?" asked Toney, with a triumphant smile.

Determined to assert his right as a critic, Allen rubbed his aching brow for a moment and answered:

"It seems to me, Mr. Barnes, that you might be charged with plagiarism in these lines."

"Where?"

"When you say

'Those beauteous sunny days have come,
The gladdest of the year.'

One can not help thinking of the familiar lines

'The melancholy days have come,
The saddest of the year.'"

"What other place?" asked Toney, his face growing very red.

"'Remain, oh lovely days, remain,' might be thought by some to have been stolen from 'Return, oh holy dove, return.'"

"But it's not, sir," interrupted Toney. "I am the author of those verses myself, and Watts and nobody else can claim em."

"Watts is not likely to trouble himself about it, but you know, Mr. Barnes, that poets must avoid any thing that savors of plagiarism."

"I guess you are right," said the poet, feeling that he was a persecuted man.

(To be Continued.)

In Good Shape.

While talking to Mr. T. C. S. Hatch a few days ago we asked him a few pointers in regard to his luck in the Louisiana State Lottery, and of the workings of the company. Mr. Hatch stated that he had been in the habit of investing for some months past a few dollars in the lottery. That he sent his money in and always received his tickets promptly. He purchased ten fortieth tickets about 10th December, 1888, among the ten was No. 69,704, the same being the number that drew the capital prize, $600,000.

"What did you do when you were informed that you had drawn $15,000, Mr. Hatch?"

"I went at once to Waco and deposited my ticket with the American National bank, and took their receipt for the same."

"Did you have any trouble in collecting your money?"

"None in the least. Four days after I deposited my ticket I was paid by the American National bank the $15,000."

"Do you think of investing your money here, Mr. Hatch?"

"I do. I shall invest principally in real estate."

Mr. Hatch has a wife and six children. He was comparatively a poor man, working as overseer of the W. P. Gaines big valley farm, three miles south from McGregor, on a salary. This good fortune has by no means made a fool of Mr. Hatch. He is a man of judgment and there is no doubt but that he will properly invest his money. Mr. Hatch will continue as overseer for Colonel Gaines. —*McGregor* (Tex.) *Observer*, Jan. 5.

Dujardin's Life Essence is rich in nerve-producing elements. It promotes secretion is granular structures, and supplies nervous waste. Hundreds have been restored to health by its use, and it can only be appreciated by a trial. Price, $1.50 a bottle. All druggists.

DAUGHTERS OF EVE.

And now comes a denial of the report that the empress of Austria is coming to this country.

It is said that Queen Victoria contemplates writing a volume of memoirs to be published some time next year.

Margaret Deland, who wrote "John Ward, Preacher," is now about 30 years old, of medium height and comely appearance.

The Duchesse d'Uzes has just sold her interest in the Veuve Cliquot firm for £120,000. She is a granddaughter of the Veuve Cliquot.

Mme. Patti Nicolini is tired of living in Wales, and she intends to buy the castle of Chenonceaux, France, the property of the Wilson family.

The Empress Frederick is collecting all the obituary notices of her husband. From papers printed in English she has received 9,000, from Germany 8,000 and from France 7,000.

Mrs. John Clinch, of New Mexico, practised with a revolver until she could hit a dime at ten paces, and then locked herself in a closet while a one armed thief spent two hours robbing the house.

Miss Titiens, a niece of the famous singer, has gone from California to live in England permanently. She "is but 17, but she is tall and stately," and decidedly pretty; and she promises well to become a fine singer.

Virogna, the Mohawk princess, who is now in New York, says the American women waste too much time on dress. She is particularly severe on the "dog women," as she calls them, whom she saw "nursing dogs" in Central Park.

Miss Braddon, whose fifty novels have been produced during her fifty years of life, is still as retiring and modest as she was twenty years ago. She absolutely refuses to permit her portrait to be published, and does not like to be lionized.

THE REASON WHY.

The reason why the PACIFIC BANK, of San Francisco, has weathered the storms which have wrecked many sister institutions during the past quarter of a century, can only be attributed to the prudent and careful policy, and to its fixed principle, never to engage in speculative or questionable transactions.

THE "LOUVRE," SAN FRANCISCO.

"Why not have the best when it costs no more than the worst," asked a reader yesterday. He referred to his recent trip to "Frisco" and the "Louvre" there.

No accidents are so unlucky but that the prudent may draw some advantage from them.

THE CHILL BLAST

That sets the naked branches a-quivering, is not felt by the wealthy valetudinarian indoors, but not all the covering that can be piled on his warm bed, nor all the furnace heat that anthracite can furnish, will warm his marrow when chills and fever runs its icy fingers along his spinal column. Hostetter's Stomach Bitters is the thing to infuse new warmth into his chilled and aguish frame, to remedy the fierce fever and exhausting sweats which alternate with the chill. Dumb ague, ague cake, bilious remittent—in short, every known form of malarial diseases is subjugated by this potent, and at the same time, wholesome and genial medicine. Biliousness, constipation, dyspepsia, sick headaches, loss of appetite and sleep, kidney trouble, rheumatism and debility are also remedied by it. Use it with persistence to effect a thorough cure.

It is admirable to die the victim of ones's faith; it is sad to die the dupe of one's ambition.

"If a woman is pretty,
To me 'tis no matter,
Be she blonde or brunette,
So she lets me look at her."

An unhealthy woman is rarely, if ever, beautiful. The peculiar diseases to which so many of the sex are subject, are prolific causes of pale, sallow faces, blotched with unsightly pimples, dull lustreless eyes and emaciated forms. Women so afflicted, can be permanently cured by using Dr. Pierce's Favorite Prescription; and with the restoration of health comes that beauty which, combined with good qualities of head and heart, makes women angels of loveliness. "Favorite Prescription" is the only medicine for women, sold by druggists, *under a positive guarantee* from the manufacturers, that it will give satisfaction in every case, or money will be refunded. This guarantee has been printed on the bottle-wrapper, and faithfully carried out for many years.

The desire of more and more rises by a natural gratuation to most, and after that to all.

CONSUMPTION CURED.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 *Power's Block, Rochester, N. Y.*

Only command persons, and you may be pretty sure that a good number will obey.

HOW'S YOUR LIVER?

The old lady who replied, when asked how her liver was, "God bless me, I never heard that there was such a thing in the house," was noted for her amiability. Prometheus, when chained to a rock, might as well have pretended to be happy, as the man who is chained to a diseased liver. For poor Prometheus, there was no escape, but by the use of Dr. Pierce's Pleasant Purgative Pellets, the disagreeable feelings, irritable temper, constipation, indigestion, dizziness and sick headache, which are caused by a diseased liver, promptly disappear.

No one so old that he may not live a year, none so young but he may die to-day.

VALUABLE DISCOVERY.

A General of the army, for a number of years stationed in Alaska, discovered that the Indians were using herbs and plants that cured Dyspepsia, Headaches, Constipation, Rheumatism, Piles, Asthma, etc. He will send trial package, with directions, to any address by mail, upon receipt of $1.00. Address General Thompson, Lock Box 2440, San Francisco, California.

PIANO FOR SALE.

An extra fine instrument which I received in trade will be sold at an unusually low figure. Address P. O. Box 2302, San Francisco, Cal.

Temperance is the moderate use of good things and total abstinence from bad things.

MANY PEOPLE REFUSE TO TAKE

Cod Liver Oil on account of its unpleasant taste. This difficulty has been overcome in SCOTT'S EMULSION of Cod Liver Oil with Hypophosphites. It being as palatable as milk, and the most valuable remedy known for the treatment of Consumption, Scrofula and Bronchitis, General Debility, Wasting Diseases of Children, Chronic Coughs and Colds, has caused physicians in all parts of the world to use it. Physicians report our little patients take it with pleasure. Try Scott's Emulsion and be convinced.

It is for want of application rather than of means that men fail of success.

See Antisell Piano advertisement.

Try Germes for Breakfast.

GET RID OF THAT BAD TASTE.

When you wake up in the morning with a bad taste in your mouth, with your throat and tongue dry and a yellow coating on your teeth and gums, don't imagine it was all caused by what you ate the night before. Of course everybody does that and everybody "swears off" from again eating such food. The trouble is that your liver is clogged, your kidneys are overworked and your bowels are not doing their duty. Take from three to ten of BRANDRETH'S PILLS and note the sudden and wonderful change in your system.

NOTHING LIKE IT!

Every day swells the volume of proof that as a specific for all Blood diseases, nothing equals Dr. Pierce's Golden Medical Discovery. Remember, this is an old established remedy with a record! It has been weighed in the balance and found fulfilling every claim! It has been tested many years in thousands of cases with flattering success! For Throat and Lung troubles, Catarrh, Kidney disease, Liver Complaint, Dyspepsia, Sick Headache and all disorders resulting from impoverished blood, there is nothing like Dr. Pierce's Golden Medical Discovery—world-renowned and ever growing in favor!

He who will not take advice gets know'edge when trouble overtakes them.

For Catarrhal and Throat Disorders, "*Brown's Bronchial Troches*" are renowned and marvellously effective, giving immediate relief.

The BUYERS' GUIDE is issued March and Sept., each year. It is an encyclopedia of useful information for all who purchase the luxuries or the necessities of life. We can clothe you and furnish you with all the necessary and unnecessary appliances to ride, walk, dance, sleep, eat, fish, hunt, work, go to church, or stay at home, and in various sizes, styles and quantities. Just figure out what is required to do all these things COMFORTABLY, and you can make a fair estimate of the value of the BUYERS' GUIDE, which will be sent upon receipt of 10 cents to pay postage,
MONTGOMERY WARD & CO.
111-114 Michigan Avenue, Chicago, Ill.

BIG G. Cures in 1 TO 5 DAYS. Guaranteed not to cause Stricture. Mfd only by the Evans Chemical Co. Cincinnati, Ohio. Trade Mark
I prescribe and fully endorse Big G as the only specific for the certain cure of this disease.
G. H. INGRAHAM, M. D., Amsterdam, N. Y.
We have sold Big G for many years, and it has given the best of satisfaction.
D. R. DYCHE & CO., Chicago, Ill.
$1.00. Sold by Druggists.

MARVELOUS!
It is truly astonishing what can be done with a single dollar when properly used. We mean to reduce shopping to a science for those who study economy—and offer until sold:
36 lbs. Unpitted Plums ... for $1.00
34 lbs. good Dried Grapes ... for $1.00
22 lbs. fair quality Raisins ... for $1.00
20 lbs. better grade Raisins ... for $1.00
12 lbs. choice Table Raisins ... for $1.00
25 lbs. good French Prunes ... for $1.00
25 lbs. Sun-dried Apples ... for $1.00
25 lbs. Alden Dried Apples, 2d quality ... for $1.00
26 lbs. Apricots, sun-dried, dark ... for $1.00
35 lbs. Dried Peaches, old, good ... for $1.00
20 lbs. Dried Peaches, new ... for $1.00
25 lbs. California Black Figs ... for $1.00
14 lbs. best new Dates ... for $1.00
16 cans Table Grapes, 2d quality ... for $1.00
14 cans American Sardines ... for $1.00
10 cans best French Sardines ... for $1.00
16 cans Lobsters, good 2d quality ... for $1.00
22 papers Standard Baking Soda ... for $1.00
35 lbs. No. 1 White or Colored Beans ... for $1.00
20 lbs. good Brown Sugar ... for $1.00
14 cans assorted spices (¼-lbs.) ... for $1.00
20 lbs. finest Laundry Starch ... for $1.00
36 cakes nice Toilet Soap ... for $1.00
25 papers Vegetable Seeds, assorted ... for $1.00
Order by first mail; send money with order; mention this paper, sure, and you will find that you have the best value you ever bought. A complete list of family supplies published monthly; samples sent free on application. Address Smith's Cash Store, No. 418 Front St., San Francisco, Cal.

DWIGHT'S SODA
THE COW BRAND.
— TO MAKE —
DELICIOUS BISCUITS OR WHOLESOME BREAD
USE
DWIGHT'S COW-BRAND SODA OR SALERATUS.
ABSOLUTELY PURE.
ALWAYS UNIFORM AND FULL WEIGHT
Be sure that there is a picture of a *Cow* on your package and you will have the best Soda made.
THE COW BRAND. DWIGHT'S SALERATUS

It Makes You Hungry
"I have used Paine's Celery Compound and it has had a salutary effect. It invigorated the system and I feel like a new man. It improves the appetite and facilitates digestion." J. T. COPELAND, Primus, S. C.
Paine's Celery Compound is a unique tonic and appetizer. Pleasant to the taste, quick in its action, and without any injurious effect, it gives that rugged health which makes everything taste good. It cures dyspepsia and kindred disorders. Physicians prescribe it. $1.00. Six for $5.00. Druggists. WELLS, RICHARDSON & CO., Burlington, Vt.
The Best Spring Medicine.
Spring medicine means more now-a-days than it did ten years ago. The winter of 1888-89 has left the nerves *all fagged out*. The nerves must be strengthened, the blood purified, liver and bowels regulated. Paine's Celery Compound—*the Spring medicine of to-day*—does all this, as nothing else can. *Prescribed by Physicians, Recommended by Druggists, Endorsed by Ministers, Guaranteed by the Manufacturers to be*
"In the spring of 1887 I was all run down. I would get up in the morning with so tired a feeling, and was so weak that I could hardly get around. I bought a bottle of Paine's Celery Compound, and before I had taken it a week I felt very much better. I can cheerfully recommend it to all who need a building up and strengthening medicine." Mrs. B. A. Bew, Burlington, Vt.

THE OBI RAILROAD.

An Enterprise of Great Commercial and Geographical Importance.

The question of opening the interior of Siberia becomes more and more important. While hitherto the canals between the large rivers, and projects of navigating the dangerous Kara Sea, were foremost among the plans that seemed likely to be realized, the project of a railroad from the lower Obi to the coast west of Nova Zembla has at present assumed definite shape. The Russian newspapers give the following reports of the project: The Obi railroad, the most northern road ever planned, will be of the greatest economic importance to Siberia. It deserves special attention, as the projectors do not demand any subsidy or Government guaranties. The river Malaia-Obi, near Obdorsk, is the starting point of the projected line, which will take a direction towards the foothills of the Ural Mountains. The latter will be crossed in one of the transversal valleys, which are not over one hundred feet above sea level. It will cross the river Ussa near its source and reach the ocean through the tundra of Bolchesemelsk. Its terminus will be in the Bay of Shainoudir, near Belcoff Nosse. The total length of the line will be two hundred and sixty miles. The price of construction, including rolling stock, is estimated at forty thousand dollars, or ten million dollars the whole line. The establishment of a port on the Arctic Ocean in the locality mentioned above, with all modern improvements for loading and unloading vessels, is estimated at one and half million dollars. To this must be added the cost of establishing a line of river boats on the Obi and Irtish, which is estimated at two and a half million dollars. Thus the whole plan requires the expenditure of fifteen million dollars in works of construction.

It is believed that the line can be worked for six months of the year. The products of the remotest parts of the Obi basin will be carried to the shipping port on the ocean in twelve days, while twelve days more will be sufficient to carry them to London. The price per hundred weight is estimated at $1.30; while on the present route, via Barnaul, Perm, St. Petersburg, London, it is $2.25, the time necessary to accomplish this distance being 130 days.

The railroad, which has been projected by Mr. Golovacheff, is intended as a means for making the transactions of a Siberian commercial company, which has been founded recently, profitable. According to the concession granted by the Russian Government, this road will not be open to the public, but will only be used by the grantee, who proposes to export the grain and stock from Southern Siberia, and hopes to be able to furnish the London market with North Siberian fish. On the other hand, the company will import principally machinery, which so far has hardly found its way to Siberia, and other articles which are at present imported by Moscow merchants.—*Science.*

GRADES IN CHINAWARE.

A Drummer Gives Away Some of the Secrets of the Business.

Few people are aware of what are known as firsts, seconds and thirds in chinaware, so that when they purchase goods they believe that they are of the same quality, and only look for beauty. Hence, when they have bought a piece or set of chinaware and observe something wrong or peculiar about it and yet can not understand why it is different from other chinaware, they have received a second. A first in chinaware is something that is perfect and without flaw. This class of goods commands the best prices, and is not often reduced at sales. When the goods just fall short of being perfect, that is, defective in workmanship, not noticeable to the casual observer, they are seconds and sell lower than the firsts. A little crack in the glazing, a scratch or an indentation makes a second. So, also, you will find the plate warped or the bottom of a saucer uneven. This was caused by some accident in firing. It makes the goods seconds. Some dealers sell firsts and seconds at the same price, making no distinction to the customer, and even deliver a second where a first was chosen, thinking only the pattern will be noticed, and most people would not notice the difference at once. The best houses make the distinction by setting a different price on the goods, so that a purchaser wonders why apparently the same sets of china-ware are of unequal charge. The dealer simply says one is more perfect than the other. Sometimes the dealers mix the two grades and sell them as firsts. This is as bad as making no distinctions between firsts and seconds. The thirds are goods that are defective. In every firing of china some pieces are imperfect, and yet not so bad as to be thrown away. They are assorted into a third grade and sold cheap. Hotels, restaurants and places where the chinaware is apt to be broken purchase thirds.—*St. Louis Globe-Democrat.*

—Some unidentified philosopher remarks that "It is the newly rich that make displays. It is the paper that has just sprung into notice that hurrahs about its circulation. It is the woman who, for the first time owns a lace shawl, who tells you what it cost."

—The longer we live the more we are convinced of the truth of the cynical remark of the unsuccessful painter, that reputation is rather the outgrowth of luck than of merit. What Hawthorne called the conspiring circumstance rarely visits our homes, and when it does we are generally absent.

AMERICAN AMENITIES.

Some Foreign Criticism Which We Can Dismiss With a Smile.

The ordinary receptions at the White House are characterized by an almost equal amount of freedom. The people walk about the rooms in an artless manner, picking a flower here and ripping off a leaf there, thumbing the *editions de luxe* which lie upon the tables, salivating anywhere—although a large number of spittoons, euphemistically called "cuspidores," are provided on such occasions—drawing their chairs up to the tables, and generally making themselves quite at home. Indeed, more than once or twice have a couple of democratic dames indulged in a set-to for a chair they had simultaneously selected. That all is both "painful and free" we do not need to be assured by the sight of the coatless colored gentleman who pushes his way through the throng to "grip massa President." Nevertheless conversation among our American cousins is constructed on brisk and business-like lines. There may be small charm of expression or conventional prettiness of phrase, but the words, be they drawled slovenly or intoned at a high rate of speed, are directly to the point. Of course the language differs greatly from our own, although there is a deal that passes for American slang which is to be found in our dialects or in Elizabethan literature.

The promiscuous use of "elegant" is an evident importation from the Emerald Isle; "mad" for "angry" is pure Sussex, as is also the "down East" "axey" for "ague." A "square meal" is an expression well-known to the dramatists of the Shakespearean era, and the indiscriminate use of the word "bug" for all manner of insects is good old English enough. Many of our country folks to this day call the lady bird the "lady bug," the cockchafer the "May bug," and the green beetle the "June bug."

We seem to strike new ground, however, when we find shirts spoken of as "waists," short coats as "sacks," boots as "shoes," a purse as a "pocket-book," goloshes as "slip-gums," handbags as "grip-sacks," the smaller articles of feminine attire as "notions," and scents as "odors." It is a little surprising when an American informs you that he is going to "tell you good-bye," when he arrests your attention and prefaces his remarks with a laconic "Say!" and request you to repeat a remark with an invariable "how" in place of our "what." And when a fair American insists on your seeing Niagara in winter, because "the fall is jest as big and the trimmings are so mightily elegant"—meaning thereby the beauty of the surroundings of ice and snow—it is, to say the least, a little painful. But then, when a beautiful sunset, a tasty dish, the weather, a certain route, or drive, or view, are all equally "elegant," what can we expect?—*London Standard.*

EVENING FUNERALS.

A Custom Which Is Having a Rapid Growth in New York.

"No, it isn't exactly a fashion," thoughtfully responded a prominent up-town undertaker in response to a question concerning the comparatively recent prevalence of evening funerals; "it is becoming a custom. Several causes combine to encourage it. First, it is less expensive. The interment takes place quietly the next day, and the funeral cortege may be, perhaps, only the hearse and one carriage containing a clergyman and some representative member of the family. Frequently, too, a funeral is appointed in the evening, because the body is to be conveyed to some distant town for interment and an early start must be made the following morning.

"Still, another influence is traceable to the city's great increase of area. You will notice evening funerals seem more frequent in the upper wards. To attend the final services over a friend's remains where the residence is above Fifty-ninth or Seventy-second street the down-town business man must easily relinquish two-thirds of his day at the office, which is not always convenient or even possible. In the evening he finds it much easier to be present.

"For my own part," concluded the undertaker, emphatically, "I don't like it. There is something incongruous about gaslight and funeral trappings. Death is natural; its accessories should be as little artificial as possible. Just as the light from a chandelier increases the ghastliness of the corpse beneath, so, to my mind, do evening funerals accentuate the gloom of such sad occasions."—*N. Y. Sun.*

A Friend and Benefactor.

"Confound your awkwardness!" exclaimed the man whose corns had been stepped on.

"I beg your pardon, sir," answered the offender, "but I think you were as much to blame as I was. You stepped directly in my way."

"Do you claim the whole sidewalk, sir, as yours? Has every body got to get out of the way when you come along?"

"Sir, I have apologized to you for the accident. If you want any further satisfaction I shall be happy to accommodate you at any time. Here is my card."

(Reads)—"'K. K. Guppins, Manufacturer of Railway Lamps.' Do you make these lamps they use on the cars?"

"I do, sir."

(With emotion)—"My dear friend, permit me to grasp your hand! I am a spectacle peddler!"—*Chicago Tribune.*

FOUND IN A CRATER.

Discovery of a Beautiful Mosaic Agate in a Mexican Volcano.

An odd-looking genius, who is a guest at the Coleman House and frequently seen about other up-town hotels, is William Cooper. He is a slender, wiry man, with a sandy beard, freckled face and twinkling eyes, who wears a brown beaver sombrero of Mexican pattern, by which he is distinctly marked out as different from the ordinary run of men in New York. Mr. Cooper has come from Mexico, where he has made important geological discoveries. He has been a great traveler. Some years ago he made an excursion up the Congo river, in Africa, between seven hundred and eight hundred miles, and brought back to Liverpool a valuable invoice of ivory and other African merchandise. He is a born trader. Nearly two years ago he first went to Mexico, where his fluent use of the Spanish language made him perfectly at home, to look for onyx and rare marble for the New England Granite Works, which was using large quantities of rare stone in the construction and decoration of the interior of a great building on Broadway, this city.

Cooper went into Southern Mexico and located at Esperanza, where he formed a partnership with a young Frenchman from New Orleans named Juilio M. Chopin. Two hundred miles south of Esperanza is the volcano of Zempoatepetl, within whose crater the Indians penetrate in search of sulphur. One of these adventurous natives found and brought out of the crater a stone which came under the eye of Mr. Cooper and was purchased by him for a silver piece of small value, which has since proven to be a mosaic agate of great and even fabulous value. Further exploration has disclosed the fact that the bottom of the crater is one solid bed or mass of mosaic agate, all of which has come into the possession of Mr. Cooper and his partner. He is modest in speaking of his good luck, but in answer to inquiries pressed on him said:

"The volcano of Zempoatepetl was celebrated long before the conquest period for rich opals, topazes and precious stones found at its base. The agate we have discovered differs from the ordinary stone of that name in the fact that it is mosaic in formation. The colors blended are those which are found in the ruby, topaz, emerald, turquoise and other stones artificially inlaid and combined by nature itself. An apophyllite or fish-eye stone, which has a pearly luster like a moonstone, with its crystals variegated in colors, is so marked in the formation of the mosaic as to bring to the eye suggestions of outlines of figures as delicately and perfectly drawn as if by the hand of a painter. No two pieces of the stone has yet been found alike. It is taken out in blocks of one to fifteen cubic feet. The crater is one hundred and eighty miles from the nearest station on the railroad. The stone is transferred thither on heavy wooden-wheeled trucks, drawn by oxen. The road is mountainous and rough. It takes forty-five days to make a rough trip from the station to the mountain.

"I have studied up the history of the volcano somewhat. Tradition says that it broke out in eruption in the year 648 A. D., the beginning of our knowledge of the Toltec race. It continued an active volcano for about 500 years, during which time many pieces of stone of mosaic formation were thrown out and picked up by the natives, by whom they were made into necklaces and other ornaments. The throne of King Xototl, who reigned in the Twelfth century, was ornamented with fragments of mosaic agate from Zempoatepetl. The country round about the volcano is a wild one, inhabited only by Indians. It is as unknown to the people of the United States as the jungles of Africa. The Indians are cleanly and for the most part honest. They make good house servants, and are nearly all religious. Their form of worship is Catholic."

In speaking of the discovery *El Nowa Monda*, a paper published at Paxaca, makes this statement and suggestion:

"Sea shells were found in the crater of this volcano, which proves that it was connected with the ocean at one time, though at present it is more than 100 miles distant from the sea coast, and over 10,000 feet high. Could this mosaic deposit be the result of a volcanic eruption under the sea at one time, in which animal life was destroyed, and the bodies petrified in mass, forming the strange deposit?"

El Commercio de Mexico computes the value of the volcano at $1,000,000. Pieces of the mosaic are now being set for exhibition.—*N. Y. Letter.*

—"Prisoner," said the chief magistrate, "you are charged with being found dead drunk on the street. What have you to say?" "I reckon I'm guilty, your Honor." "Ten dollars and costs. Next. Same charge against you, sir. Have you any plea to make?" "Your Honor," replied the prisoner, wiping his spectacles on the tail of his coat and speaking with great dignity, "with your permission I wish to enter a plea of guilty to the charge of being discovered on a public thoroughfare while in the condition technically and scientifically known as alcoholic trance." "My friend," said the magistrate, kindly, your offense is merely a nominal one. You may go."—*Chicago Tribune.*

—Old lady (to grocery boy)—"What makes the price on them potatoes so stiff, boy?" Grocer's boy—"It's because there's so much starch in 'em, mum."—*Life.*

A QUEEN'S HOUSEHOLD.

Dignitaries and Parasites Who Draw Salaries Without Doing Any Work.

Queen Victoria's household has nearly a thousand officers, subordinates and attendants. The Lord Steward is at the head of all with a salary of $10,000 a year. All officers and servants, except those connected with the Queen's chamber, stable and chapel are subject to his orders. The active duties of this officer are performed by the Master of the Household, who gets $5,790 a year. The Lord Treasurer ranks next to the Lord Steward and acts for him in case he is absent, while to assist him he has the Comptroller of the Household, who likewise does nothing. The Board of Green Cloth, composed of the four above named officials, adjudicates on offenses committed in certain parts of the palace, and has clerks and secretary. The clerk of the kitchen and his clerks keep accounts, check goods, and give orders to tradespeople.

There is a *chef* and many cooks, a head of the confectionery department of the "ewer" or linen department, a chief butler, table deckers, men in charge of the plate, pantry and of the coal, and lamp lighters and dispensers of alms. The Lord Steward is judge of the Court of Marshalsea, with power to dispense justice among the Queen's domestic servants, and the court has a Knight Marshal. The Lord Chamberlain gets $10,000 a year and with the Vice Chamberlain, superintends all the officers and servants of the Queen's chambers, except the bed chambers, these being under the Groom of the State, as well as the officers of the wardrobe. The Keeper of Her Majesty's Privy Purse is her financial secretary at a salary of $10,000. There are the Mistress of the Robes, the Groom of the Robes, Ladies of the Bed Chamber, Maids of Honor, bed chamber women, Lords in Waiting, Grooms in Waiting, Gentlemen Ushers of the Privy Chamber, Daily Waiters, Quarterly Waiters, Grooms of the Privy Chambers, Grooms of the Great Chamber and Gentlemen of the Privy Chamber. The Marshal of Ceremonies must have an absolute knowledge of Court etiquette.

The official places many of them call for no performance of duty, because with the change of customs the duties have become obsolete. The Master of the Tennis Court does nothing. There are a Master of the House, burgomaster, keeper of the swans, and hundreds of assistants to the officers mentioned. All this looks like keeping house under difficulties, and Queen Victoria ought to be well paid for it.—*Good Housekeeping.*

THE TSIEN-TANG BORE.

A Great Wave That Rushes Into Hangchow Bay Twice a Day.

Captain W. U. Moore, R. N., of her Majesty's surveying vessel Rambler, has lately been engaged in observing the celebrated bore of Tsien-tang river. Captain Moore regards this as one of the sights of the world, which no resident in or visitor to China should miss seeing. It occurs twice in every twenty-four hours, being most remarkable at spring tides. Captain Moore favored us with the following notes:

"The best place to see the phenomenon is from the sea-wall at Haining, about two miles east of the Bhota pagoda, where there is a violent rebound of the flood stream, and consequent upraising of the water behind the front of the bore. The bore can be seen approaching from the upper gallery of the pagoda about ten or twelve miles distant; and heard on a still night, one hour before it strikes, when it is twelve or thirteen miles distant. It is highest as a whole and most regular in form opposite the pagoda, which it passes at full change of the moon at a speed of twelve to thirteen knots an hour; precisely as the moon crosses the meridian of that spot. It has its origin off Chi-san, a cape about eighteen miles east by south of Haining, and travels to six miles above the city of Hangchow, a total distance of forty-two miles. Under certain combinations of wind, spring-tide and rains up country, it commences as far east as Chapoo, and retains its distinctive character to about thirty miles above the city, a total distance of over ninety miles. The general height of the bore, that is the crown of the cascade, varies at spring-tide from seven to eleven feet. It has been seen much higher on the approach of a typhoon and consequent banking up of the water in Chapoo bay. The water raised by the rebounds from the sea-wall, especially that mentioned in the foregoing remarks, mounts to a height of twenty feet or more above the level of the river in the same spot five minutes before.

"At neap tides the bore sometimes does not attain a height of over three feet, but the speed of its progress still renders it too formidable to be encountered by the largest boat. Navigation for ships in the Tsien-tang is not practicable, though the depth of water is sufficient—if time or tide is regarded—to reach Haining from the ocean in vessels of fifteen feet draught and to anchor off the pagoda."—*North China News.*

—First Kentuckian—"Say, Colonel, there's a Mormon elder down the road preachin' to a crowd o' women an' singin' 'Would I Were a Bird!'" Second Kentuckian—"Well, I kin furnish the feathers. You git some tar to stick 'em on."—*Philadelphia Record.*

—Lord Lucan, who recently died in London, was the man who gave the order for the famous charge at Balaklava—the charge of the light brigade.

A MATTER OF BUSINESS.

Wedding Invitations That Were All Good for Something.

Miss Virgie de Shrewd (who is discovered seated at her davenport addressing numerous square envelopes containing invitations to her wedding)—We must be careful to whom we send invitations, mamma, dear. But of course we will invite the Baxters.

Mrs. de Shrewd—Certainly, my dear. They are good for at least a case of solid silver cutlery, if not something in diamonds. Mrs. Baxter was always fond of you."

"Yes, I know. And what about the Bellevilles?"

"I really don't know. They didn't give any thing but a pie-knife when Leuretta Brace was married, and I've an idea it was one of the half-dozen their daughter Belle had when she was married. We'll not count them in just yet."

"Of course we'll have the Brintons. They've as good as promised me something splendid in Dresden china. Then, there's the Peytons; I detest the whole tribe of them. But they always give solid silver, so they must be invited.

"Certainly; and the Macklires."

"Oh, they'll bring something splendid in bric-a-brac. They're in the business, you know. I wonder if the De Cracy's would bring any thing worth having?"

"I really don't know. They might. They gave superb cut-glass at the Bennett-Grace wedding last month, and I raved over it, thinking they might take the hint if we sent them cards to your wedding. I believe I'd risk it."

"They'll hardly have the face not to bring something decent when there's six of them. I don't know what to do about the Ridley's. They actually gave Marian Leyster plated ware and—"

"They'd be very likely to do the same with you. I wouldn't run the risk. Invite the Layton's instead. They'll be sure to bring something worth having."

"I do wonder if there's any hope of getting diamonds from the Revenels. And what do you suppose the Dreightons will bring?"

"Well, I hope they'll have the decency to bring something better than the etching they gave Marian Leyster."

"I should hope so. Well, I've addressed one hundred and fifty invitations now, and I believe they're all good for something, unless it is the Greyvilles and the Smyths, and we can drop them if we finally conclude they're not likely to send any thing."—Time.

THIEVES AND BUNCO-MEN.

A Detective Says They Are Not So Clever as They Once Were.

"Do you know New York thieves are not any thing like so clever as they used to be?"

The speaker was one of Inspector Byrne's veterans, and there was actually a touch of sadness in his voice as he spoke, as though the decline of clever rascality was really a bad thing for the public generally. The reporter asked the detective the cause of this change which seemed to affect him so.

"Well, that's more than I can tell," was the reply. "It may be because so many of the leading thieves are in jail, or have been scared out of New York by the police, and that their places have been taken by new hands. It is not because there are no thieves, for there are just as many as ever. As soon as one is jailed or frightened off another bobs up and takes his place. But, be it as it may, the whole gang are a precious lot of bunglers.

"There isn't the talent around now to get up another Manhattan Bank affair. Even the bunco and "badger" game men are losing their grip. Take the attempt to rob Phil Daly, the gambler. That affair was a botch. So was the attempted diamond robbery. As for the attempt to "bunco" W. D. Morrissey, the Western miner and horseman, it was clumsy enough to cause some of the old-time "bunko" men to weep. And so the thing goes. It may be that the "crooks" are down on their luck, for "Hungry Joe," who used to be the cleverest of the bunco men, has made more bad breaks lately than a greenhorn, and is locked up in Baltimore as a result.

"The only clever stealing that has been done of late," the detective went on to say, "has been done by men who were not in the regular order of thieves, and who struck out on a new line for themselves. These were such men as Foster and Bedell, the lawyers. But the old line of thieves, as I have said, seem to be losing their grip, and if they keep on there won't be any credit in getting the best of them, or in hunting them."

And with this the veteran, who has made some very clever captures in his day, turned away with a sigh.—N. Y. Mail and Express.

Something Had Happened.

"Do you expect a raise of salary the first of the year?" he inquired, as they rode together on the rear platform of the car.

"Not now."

"Has any thing happened lately to upset your expectations?"

"There has. I had my salary cut down four dollars a week, and was told that I didn't earn half what I was getting after that"—*Detroit Free Press.*

—Tinware is best washed in soda and water. It can be scoured with care, yet if kept clean from day to day it seldom need come to scouring, which process wears it out quickly.

CORN CULTIVATION.

How the Disadvantages of a Dry Season Can Be Best Overcome.

At the close of each growing season there are some lessons of the year that should be gathered up and rehearsed in order to fix them permanently in mind, and also to add to the stock of general information, which all should be glad to increase to its utmost extent. If the changes for each month for the entire season came in routine order—recurring at stated times in exact periods of duration—the science of agriculture would long since have reached beyond the domain of conjecture and entered the list of exact sciences. The effectual processes that bring success in this year's operations would be the pattern for next season's practice in every line of farming. But in proportion as the changes of the season differ, so the application of different practices becomes necessary. While we are striving to determine what system of tactics to employ in a wet or cold season, we forget what manipulation of the soil becomes necessary for a dry one.

In discussing this phase of farming with a few gathered farmers at a neighbor's fireside lately, the special subject of growing corn in a dry season came up, and it was generally conceded that our knowledge of cause and effect in the growth of this crop was very limited. The heroic treatment of continued cultivation has proved fatal in every instance, especially where any thing more than surface cultivation was attempted. Many fields, under a system that would be considered slack, when gauged by the usual effective methods, have produced all that could have been expected in average years, while constant and thorough cultivation damaged and dwindled the crop down to a meager half.

There is a limit beyond which cultivation ceases to do good, and is frequently, especially in a dry season, a serious damage. When the soil is free from weeds, and is well pulverized, no further manipulation can increase its power of appropriating its essential food and moisture. Every attempt to increase this power disturbs the operations of the root system and checks the growth of the plant. Apple trees are frequently pruned so severely that they die of their wounds. Every nurseryman knows that it takes from seven to ten days for young trees to recover, and begin to grow after each pruning of the top. In a wet season, when the earth has a full supply of moisture, corn grows in spite of vigorous cultivation, and indeed the fact that the season is wet, often prevents excessive stirring of the soil. The rule that is here now commonly accepted, is to stir the surface of the ground after each heavy rain that is liable to crust the top soil; but while the earth is becoming drier and drier, keep out of the corn and sit in the shade rather than work it then.

We know so little of what is going on beneath the first two inches of earth that it is not surprising that we allow custom instead of knowledge to guide our acts. The effectiveness of improved machinery makes it comparatively easy to stir the soil to any reasonable depth. With this power to do comes the desire and fashion, with no consideration for the evil that may be done to the growing crop. Harrowing wheat in the spring with the view of improving the growth is a twin fallacy that ought to go to that crowded limbo of rejected theories where such nonsense naturally belongs.—*Cor. Country Gentleman.*

HOW WOOD IS BENT.

How the Latest Machines Devised for This Purpose Do Their Work.

Recent construction employs bent wood much more largely than formerly; replacing thereby sawed forms of irregular shape or built-up members with mortised and tenoned joints.

Bent wood is now largely used in wagons, carriages and car building, chair making and the like; and it has even been seriously proposed for ship-building to replace by bent members all knees and other timber of curved outline. The steam-box makes the wood pliable, and when cold it retains the form into which it was bent while hot. Recent machines bend small articles around hollow steam-heated formers, thus doing away with the necessity of opening a steam-box and maintaining tight joints therein.

In bending shafts the formers and beds are arranged in sections each to hold ten shafts, one section of ten being made right and the other left handed. All twenty of the shafts get their vertical curvature around a drum as in plow-handle bending, and the lateral bend is accomplished after the shafts have been brought down to the horizontal plane and the vertical bend thus formed. Both the form for the vertical bend and the bed for the horizontal are hollow and heated by steam.

In a recent plow-handle bender, the formers are cast in one piece, making a cylinder to admit steam. Upon the periphery of this there are fifteen grooves of proper depth to suit the inside shape and circle of the handle, and at the terminus of the grooves there are lugs cast to attach long handles to. Each handle is placed in a socket and bent by a lever, over a former; being allowed to remain two and one-half hours in place. After this the handle will remain in shape in any climate.—*Cor. Mechanical News.*

—A wet towel heated with a hot flatiron passed over it will often alleviate aching heads. With two flatirons, one heating while the other is used by the patient, hot applications are easily made.

THE FATAL BARRIER.

Why Miss Garpickle Gave the Mitten to Love-Sick Bardolph Kiljordan.

"Miss Garpickle, you are trifling with me!"

Bardolph Kiljordan stood before her, as erect, imperious and gloomy as the star actor of a broken and dismembered dramatic combination standing on one side of the track half way between stations and watching a handcar propelled by section men sweeping rapidly past and disappearing in the hazy distance.

Mr. Kiljordan burned with the indignation of an abused, insulted man.

"For months and months," he said, "you have encouraged me. You have smiled upon me. You have accepted my attentions. You have listened to me with apparent approval when I have ventured to hint at a feeling stronger than friendship—"

"Mr. Kiljordan," interposed the young lady, "I will not deny that your attentions have been agreeable to me."

"Then why, Vinnie, he exclaimed, imploringly, "why do you tell me it can never be? Why do you look at me coldly and say we were not meant for each other?"

"I would have saved you this pain if I could, Mr. Kiljordan. I have waited and waited, hoping that the barrier between us might disappear—that you would—would see what it is that interposes so fatally—"

"Vinnie," he exclaimed, tremulously and excitedly, "perhaps it is not too late, even yet! Perhaps I may be able to—"

"It is impossible, Mr. Kiljordan," replied the young lady, firmly yet kindly. "I shall always entertain the highest esteem for you as a man, a citizen, a friend and an excellent judge"—here her voice faltered—"of post-theatrical refreshments, but any closer relationship, I am now convinced, can never be thought of."

"Vinnie Garpickle!" he exclaimed, with bitterness, "so be it! I shall not go down on my knees. It would do no good. The carpet, besides—"and the young man looked at it dejectedly—"if you will excuse me for saying so, Miss Garpickles, is—is not in that condition of—ah—of tidiness that—er—"

"Perhaps, Mr. Kiljordan," suggested the young lady, freezingly, "you will put an end to this painful scene by—"

"Going? Certainly, Miss Garpickle, certainly. But I think I have the right to ask you, since this will probably be the last time I shall ever have the opportunity, what the nature of the barrier is that separates us. Have I not?"

"You have, sir."

"Then why have you refused to be my wife?"

"Because, Mr. Kiljordan," she replied, with ineffable sadness, "I can never link my destiny with that of a young man who wears reversible cuffs."—Chicago Tribune.

A PERSISTENT PEDDLER.

But He Failed to Dispose of the Article He Had for Sale.

"I should like to sell you a gimlet," said a care-worn-looking man, as he walked into an office the other day.

"We have no use for one," replied the cashier.

"But you should always look into the misty future," went on the friend, demurely. "Next winter you will want to make holes in your boot-heels so you can get your skates on."

"I use club skates—no straps required."

"You may want to screw some boards together some time. The old-fashioned method of driving screws in with a hammer is pernicious, as it deteriorates the tenacity of the fangs of the screws, as it were."

"Nothing to-day, sir."

"The gimlet also acts as a cork-screw——"

"I don't want it."

"It may be used as a tack-hammer, a cigar-holder and also as a tooth brush."

"I don't want it."

"It has an eraser, a pen, an ink-stand, a table for computing compound interest and a lunch-box attachment."

"I can't help it; I don't want it."

"I know you don't. You're one of those mean men that won't buy a gimlet unless it has a restaurant, a trip to Europe and an Italian opera company attached. You're the kind of a man who would live near an electric light to save a gas bill."

And the peddler walked out with his mental plunge on the perpendicular.—Texas Siftings.

He Countermanded His Order.

He had been to a jeweler's and selected an alleged diamond ring, price $8, and had arranged to pay on the installment plan, when his girl suddenly said to him the other evening:

"James, I feel it my duty to tell you that I have been engaged no less than four times, and that I have broken each engagement myself. In each instance the young man presented me with a paste diamond, and I could respect him no longer. Please take warning and govern yourself accordingly."

He has countermanded his order and will give her a box of plain candy.—Detroit Free Press.

His First Experience.

"What is the matter, my son?" inquired the benevolent gentleman.

And the pale, trembling boy, who was lying across a barrel on his stomach in an alley back of a cigar store and making exclamations in a sort of broken English at convulsive intervals, said he guessed he was one of the victims of the smoke nuisance.—Chicago Tribune.

INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PROPRIETOR
PUBLISHED EVERY SATURDAY

INDEPENDENCE, CAL

SATURDAY MARCH 23 1889

The following is taken from the report of the last regular meeting of the Los Angeles Chamber of Commerce as published in the "Herald."

"A petition was then read addressed to the Postmaster General, asking for a daily mail service between Mojave and Owens Valley, in Inyo county.

"Mr. Mulholland was asked to address the meeting on the matter of this petition and the proposed railroad connection between Mojave and Keeler. Mr. Mulholland took the floor and spoke for about fifteen minutes, detailing in graphic language and with forcible argument the advantages which would accrue to Los Angeles through the connection. He estimated the annual trade of Owens Valley at three-fourths of a million of dollars, all of which goes to San Francisco. From Keeler, the present terminus of the road, ore is sent 600 miles to be smelted. It might better be brought here and worked in this city. Marble could be put down in this city cheaper than pressed brick. Potatoes, hay at seven dollars a ton, and all kinds of farm produce, which at present is shipped all the way from the East, could be delivered here. Owens Valley can support 75,000 people, who would all be customers to Los Angeles, and would in time help to supply and cheapen its markets. The reason why the Carson and Colorado was not extended was that one of its chief owners was a San Francisco man, who was unwilling to see the trade divided.

"Mr. Mulholland's remarks were heartily applauded. It was moved that the Committee on Commerce be instructed to confer with the Southern Pacific officials who were soon to visit the city and endeavor to interest them in the matter. It was also decided that a special committee be appointed to secure additional signatures to the petition for a daily mail service."

CRYSTALLIZATION OF FRUITS.

The Method as Explained to California's Board of Horticulture.

The process of preserving fruits in a crystallized or glaced form is attracting considerable attention at the present time. This process, though comparatively new in California, has been extensively operated in Southwestern France for years, the United States having been heavy importers, paying fancy prices for the product. The process is quite simple. The theory is to extract the juice from the fruit and replace it with sugar syrup, which, upon hardening, preserves the fruit from decay and at the same time retains the natural shape of the fruit. All kinds of fruit are capable of being preserved under this process. Though the method is very simple, there is a certain skill required that is only acquired by practice. The several successive steps in the process are about as follows: First, the same care in selecting and grading the fruit should be taken as for canning; that is, the fruit should be all of one size and as near the same ripeness as possible. The exact degree of ripeness is of great importance, which is at that stage when fruit is best for canning. Peaches, pears, etc., are pared and cut in halves as for canning; plums, cherries, etc., are pitted.

The fruit having thus been carefully prepared is then put in a basket or bucket with a perforated bottom and immersed in boiling water. The object of this is to dilute and extract the juice of the fruit. The length of time the fruit is immersed is the most important part of the process. If left too long it is overcooked and becomes soft; if not immersed long enough, the juice is not sufficiently extracted, which prevents a perfect absorption of the sugar. After the fruit has been thus scalded and allowed to cool, it can again be assorted as to softness. The next step is the sirup, which is made of white sugar and water. The softer the fruit, the heavier the sirup required. Ordinarily, about 70 degs. Balling's saccharometer is about the proper weight for the sirup. The fruit is then placed in earthen pans and covered with sirup, where it is left to remain about a week. The sugar enters the fruit and displaces what juice remained after the scalding process.

The fruit now requires careful watching, as fermentation will soon take place, and when this has reached a certain stage the fruit and sirup is heated to a boiling degree, which checks the fermentation. This heating process should be repeated as often as necessary for about six weeks. The fruit is then taken out of the sirup and washed in clean water, and is then ready to be either glaced or crystallized, as the operator may wish. If glaced, the fruit is dipped in thick sugar sirup and left to harden quickly in open air. If it is to be crystallized, dip in the same kind of sirup, but is made to cool and harden slowly, thus causing the sugar which covers the fruit to crystallize. The fruit is now ready for boxing and shipping. Fruit thus prepared will keep in any climate and stand transportation.—J. J. Pratt.

The tough is a product peculiar to American city life. In other countries, of course, you will find the rough and the cad and the brutal coster, but it is only in an American city that you will find the tough. In other lands the man who comes nearest to the tough is but a subject, and a very poor one at that, and he is constantly more or less in dread of a superior governing power. In America the tough is a citizen, or at least claims to be one, and he feels not only the equal of everybody else, but the superior of everybody else, and he has a profound scorn and contempt for all processes of law. The tough is a terror, and there is no reason why he should escape whipping. Arrest or imprisonment he fears not, but a good dose of the cat-o'-nine-tails might bring him to reflect on the error of his ways.—Boston Home Journal.

THE ARID LAND AREA.

RECLAIMING WASTE REGIONS BY MEANS OF IRRIGATION.

Agricultural Lands of Colorado Which May Be Made Immensely Productive. Atzec Canals and Irrigation Ditches. The Rain Belt—Farmers' Testimony.

Mr. T. C. Henry, formerly of Kansas, and now one of the most prominent men in Colorado, who has been instrumental in building several large canals in the state, in discussing this question, says: "Of the 40,000 square miles of the territory in this state east of the foothills less than 3,000 square miles are actually and systematically formed. It is my deliberate conviction that were all the water of all the streams covering these plains absolutely preserved for domestic and irrigating purposes and applied with the skill and economy displayed even in India or Egypt, we could irrigate and make fruitful every acre of this immense area—an area capable of supporting an agricultural population, urban and rural, of 3,000,000 people, and yet it would be less than one-half as densely populated as Belgium or the agricultural sections of France.

"The area east of the mountains is practically all agricultural land, and if peopled as densely as is Belgium, would contain a population of more than 8,000,000 of people. Or if provided with water for irrigation, skillfully applied, each forty acres would support a family of five persons, aggregating a population of more than 3,000,000, not including the directly dependent urban population. On the same basis, the great San Luis valley would sustain a population of 1,000,000; the San Juan country in the southwest nearly 1,000,000; the Gunnison and the Lower Grande, 750,000, and the White, the Yampah and the almost unknown Northwest, 1,000,000 more. Before the close of another century there will have been elaborated a system of agriculture surpassing that wonderful civilization which Moorish power planted in the irrigated valleys of Spain ten centuries ago, maintaining the millions then populating our grand commonwealth. There are not less than 30,000,000 acres of agricultural lands in this state which only need the application of irrigation to be made as valuable and productive as any already cultivated."

Carry these same predictions into western Nebraska and Kansas, into Wyoming and New Mexico, Idaho, Utah and throughout the west, by utilizing the waste waters saved in reservoirs, and the future greatness of the west is almost inconceivable. These things are possible. The ruins of the Aztecs and Pueblo Indians, and great nations that are only known in the dim past by the desolation of mighty cities, tell us how densely populated were vast regions in the west in an almost unknown antiquity. With these ruins are old canals and irrigation ditches, and in some of them there is said to have been used a kind of cement that is now a lost art. These ruins are found in arid sections where it would have been impossible for a great population and cities to have thrived without vast irrigation schemes. These great nations have been swept away. How? No one knows, but from the dim borderland of that almost hidden antiquity there come up facts that when first considered seem almost like a dream. But it is history, and let history repeat itself. The public domain will soon be a thing of the past, and the present must look to the future, and if this great water question is grasped by our statesmen as it should be, it will lay the foundation for still new and mighty commonwealths.

Is the rain belt gradually moving westward? This is a much disputed question. Irrigating ditches make more surface water, and hence there is more evaporation. That proposition cannot be denied, although it must be admitted that the rain does not always fall in the same locality where the water was taken up by evaporation. It is also claimed by some that tree planting does not materially increase the rainfall.

In the January number of Science, Henry Garnett says: "Over 100,000 square miles of almost treeless prairie in Northern Missouri, Southern Minnesota and parts of Illinois and Indiana have been reforested since their settlement, and furnish an example of reforesting unequaled elsewhere upon the face of the globe, and yet the rainfall has not increased. On the other hand, there have been more acres of land denuded of forest in the United States within a century than anywhere else in the world, yet there is no evidence of a diminished rainfall."

Professor Sargent, of Harvard college, says: "The removal of a forest from any region will not diminish the amount of rain falling upon it; nor can the increase of forest in a slightly wooded or treeless country increase its rainfall. The gradual drying up of countries once fertile, within the history of the human race, but now barren and almost uninhabitable, must be traced to gradual geological changes, of course entirely beyond the reach of human control, and not to the mere destruction of the forest."

But there are able men who have thoroughly studied the question and who state that the rain belt is surely coming westward. Among the number are Professors Wilber, Angbey, Snow, and ex-Governor Furnass, of Nebraska and Kansas. The observations taken at Fort Leavenworth during a period of thirty-eight years are said to indicate an annual increase in the rainfall of 5.21 inches; thirty years at Fort Riley, twenty-four at the State Agricultural college, and seventeen years at the State university, Lawrence, Kan., are said to give figures showing an increase in the rainfall of 3.05 and 3.06 inches per annum. The data is very valuable, and seems almost indisputable.

But there is still a stronger authority, the farmers themselves. In Western Kansas and Nebraska and Eastern Colorado, farmers are now raising crops on what was formerly known as the Great American Desert. They claim that there is a great future for that section, and they raise crops without irrigation, depending solely on the rainfall. And so while some scientists are doubting the statement that the rain belt is coming west, farmers are raising crops. If, in that section, they can raise the cereals without irrigation, so much the better, but there are many millions of acres of land that can never be made productive without irrigation, and let us have reservoirs and great canals, and from what are now arid regions in the west new empires are possibilities.—Will C. Ferril in Kansas City Journal.

The Cause of It.

First Citizen—Your wife seems to have aged greatly of late. What is the matter?

Second Citizen—She got that way waiting for change in one of our big trimming stores.—Pittsburg Bulletin.

The Family Man.

He walks the street with jaunty pace,
Salutes each friend he sees;
His cheerful mien, his smiling face,
Denote a mind at ease.

What's caused this change? A week ago
We saw him coming down
With mien dejected, footsteps slow,
And on his face a frown.

The frown has fled, his step is light—
Behold him swing his cane!
His head's erect, his eye is bright;
He's happy; that is plain.

You'd like to know the reason?
And I will give you one:
The price of coal's about to drop
A dollar on the ton

Sunburn Without Heat.

Ironworkers, glassworkers and others are constantly exposed to a heat of 400 or 500 degs. F., and yet do not become burned, and there can be little doubt that the enormous radiation from heated rocks and valleys, in addition to the direct rays of the sun, make up an amount of heat far greater than is ever experienced on even a very sunny snow slope, and yet one does not become sunburned. No doubt the surface of the snow reflects and disburses much heat, but certainly far less than it receives, as heat rays are absorbed and rendered latent by the snow melting and evaporation. Experience fully corroborates this, for one may lie on one's back and freely expose the face for long periods to the sun and yet remains unburned. There must, therefore, be some one factor in sunburn than heat alone.

In discussing the subject with Professor Tyndall he added the very interesting and significant fact that he was never more burned on snow than while experimenting with the electric light at the North Foreland lighthouse, where there was no heat sufficient to produce such an effect. I am aware that sometimes, in peculiar conditions of the atmosphere, the direct sun's rays will burn. I have met with some singular instances where several persons have been burned on the same day, even in England, who had never previously suffered in that way. I am further aware that sometimes, not always, in a dead calm on a ship's deck, one may be severely sunburned, and that in boating the same may occasionally happen.

Masks and veils have long been used as a protection on snow, and are more or less successful, brown veils and glasses in my experience being the most efficient. As bearing up this I may mention that a friend of mine, after an ascent on snow, had an enormously swollen face, and I observed that in the general swelling there were many pits and depressions, and that each pit corresponded to a freckle. The irritating rays had been intercepted by the brown color of the freckle.—Nature.

Two Sides of the Question.

One thousand one hundred and eighty-one young women and girls attended the free day and evening classes connected with the Young Women's Christian association last year. There are free classes in stenography, type writing, bookkeeping, commercial arithmetic, business training, drawing, modeling and designing, retouching photo negatives, physical culture, choir music and dressmaking. Said a lady interested in the association to the writer: "Surely the women and girls of New York ought to embrace these advantages and make the most of them."

One bright looking young woman, though perhaps not patient and persevering enough, looked rather dubiously at the speaker as she remarked: "But the market seems overstocked now with stenographers, typewriters, bookkeepers; in fact every department of woman's work seems crowded to overflowing. At the Cooper Union Free School of Telegraphy they will not take pupils, unless some prominent man, or some person with a good standing in the community, comes forward and guarantees them positions."

"Mark Twain," said the lady, "with his characteristic force, on the other hand, expresses himself as follows: 'All trades and occupations are cramped and hindered for want of people to do the work, not for want of work to do. When people tell you the reverse they speak that which is not true. If you desire to test this you need only hunt up a first class editor, reporter, business manager, foreman of a shop, mechanic or artist in any branch of industry, and try to hire him. You will find that he is already hired.' It is the same with women as it is with men. The best, the most skillful, are always in demand."—New York Press.

Beecher and His Word Pictures.

If I were required to sum up Beecher, as he seemed to me during the first twenty years of his experience in Brooklyn, as I grew up beneath his eye from little boyhood to man's estate, I should hesitate not one second in answering, heartiness. He was hearty in everything he did; his aye meant aye, and his nay meant nay. He was peculiarly tenacious about his expressions, as, for instance, one time he described a vision. Standing, in apparent rapture, at the very front of the platform, with his eyes thrown far beyond the horizon, he spoke of the goddess of Liberty with a diamond scepter in her hand.

When he came home that night I said: "I had to laugh when you spoke about the goddess of Liberty with a diamond scepter in her hand. Of course you meant a diamond pointed scepter, there is no such thing as a diamond scepter." He was lying on a hair cloth sofa in mother's back parlor, but rising quickly, and resting himself on one elbow, with tremendous emphasis, he replied:

"Nonsense! I guess I know what I saw."

That of course led up to an interesting discussion as to the illustrations, pictorial, for which his public utterances were noted. He lived in pictures, and during the discussion he said:

"Why, certainly, I see them. Else how could I describe them?" In other words, his imagination caught with nervous hand upon the tail of fancy, and drawing it to him, enabled him to describe, in words, for the understanding of his hearers, that which to him was an apparent reality.—Joe Howard in Once a Week.

The Old World's Railroads.

We are, as yet, only at the edge of the great projects of railway and other methods of intercommunication. The time will come when every remote hamlet will be centralized, and no land will be out of easy reach to the tourist and to commerce. The next great steps of progress are to be taken in Asia. Besides the roads projected and building in Siberia and China, there is now a 1,400 mile road proposed from Constantinople to Bagdad. This will open a new route to China shorter by ten days than that by the Suez Canal. Americans understand very well the rapid changes that follow the opening of such a line. Science says: "It will create a new Asia Minor." Then again Bagdad will become one of the world's great cities. Lovers of the Arabian Nights will associate considerable romance with this latest project of commerce.—Globe-Democrat.

Cause of Premature Age.

"I have 500 gray hairs in my head and I'm only 36," said a friend to me, and coming down in a street car another friend took up the same theme and asked: "Why is it we get old so quick in this country?" I could not say, not being old. "We live in such a hurry," he said, answering his own question. "All we think of is getting money in this country. In the old country they think of spending it. I mean that we are reckless of how the money goes after we get it, and so we are extravagant and need more money and strive harder to get it, and get old young. I believe there are more lunatics in this state of New York with its five and a half millions than in all France with its thirty-seven millions. In France a man regulates his spending. He has so much income. He makes it go as far as it will, and lives in a regular and methodical fashion on that basis. He doesn't grieve for more because he can get comfort out of what he has. But here we are so anxious to make that we neither spend with economy nor get comfort out of what we spend. We waste our strength to get it, and then waste what we gain, for we don't get the good of it."—Buffalo News.

MISCELLANEOUS.

Notice for Proposals

NOTICE IS HEREBY GIVEN THAT IN pursuance or an order of the Board of Supervisors of the County of Inyo, State of California, made on the 6th day of February, 1889, the undersigned, Clerk of said Board, will receive sealed plans and specifications for a proposed new bridge across Owens River, to be erected on or near the site of Big Pine bridge, up to 12 o'clock M., May 7th, 1889.

The same will be opened between the hours of 2 and 4 o'clock P. M. of said day.

Said plans and specifications must be endorsed: "Plans and specifications for bridge across Owens River on or near the site of Big Pine brikge."

The right is reserved to reject any and all plans and specifications. P. H. MACK,
Clerk of Board of Supervisors.

GEO. M. GILL,
District Attorney,
INYO CO., CAL.

J. R. ELDRED,
Sheriff and Tax Collector,
INYO CO., CAL.

P. H. MACK,
COUNTY CLERK,
—AND—
Ex-officio Auditor and Recorder,
INYO CO., CAL.

JUSTICE OF PEACE,
C. MULHOLLAND.
Office in the "INDEPENDENT" building, Independence, Inyo County, Cal.

F. E. Bunting, M. D.
Physician & Surgeon
LONE PINE, CAL.
OFFICE IN GELCICH BUILDING
All calls attended to immediately.

PALACE SALOON,
INDEPENDENCE, CAL.
J. J. GUNN, Proprietor.
WINES, LIQUORS, CIGARS
A fine new billiard table; nicely fitted up club rooms to the use of patrons, in every respect.
FIRST-CLASS RESORT.

Independence Hotel.
Independence, Cal
H. LEVY, Proprietor.
FIRST CLASS HOTEL
DINING ROOM, APARTMENTS.
—AND—

LITTLE'S
CHEMICAL FLUID
NON-POISONOUS
SHEEP DIP.
One gallon mixed with 60 gallons of cold water will dip thoroughly 180 sheep at a cost of 1 cent each. Easily applied; a nourisher of Wool; a certain cure for SCAB. Also,
Little's Patent Powder Dip.
(POISONOUS)
Mixes instantly with water. Prevents the fly from striking. In a 2 pound package there is sufficient to dip twenty sheep, and in a 7 pound package there is sufficient to dip one hundred sheep.
CATTON, BELL & CO
Successors to FALKNER, BELL & CO.,
No. 406 California Street, and Wool Agency warehouse, 6th and Townsend Streets,
SAN FRANCISCO, Cal.

WANTED
About 60 head of young cattle to handle on shares. I have excellent summer range and the best of winter feed. The stock will be well attended to. A graded bull from Mr. Hunter's thoroughbred Durham will be turned with the band. For particulars apply to JAMES JENKINS,
3-2 Lone Pine.

SCIENTIFIC AMERICAN
ESTABLISHED 1845
Is the oldest and most popular scientific and mechanical paper published and has the largest circulation of any paper of its class in the world. Fully illustrated. Best class of Wood Engravings. Published weekly. Send for specimen copy. Price $3 a year. Four months' trial, $1. MUNN & CO., PUBLISHERS, 361 Broadway, N.Y.

ARCHITECTS & BUILDERS Edition of Scientific American.
A great success. Each issue contains colored lithographic plates of country and city residences or public buildings. Numerous engravings and full plans and specifications for the use of such as contemplate building. Price $2.50 a year, 25 cts. a copy. MUNN & CO., PUBLISHERS.

PATENTS may be secured by applying to MUNN & CO., who have had over 40 years' experience and have made over 100,000 applications for American and Foreign patents. Send for Handbook. Correspondence strictly confidential.
TRADE MARKS.
In case your mark is not registered in the Patent Office, apply to MUNN & CO., and procure immediate protection. Send for Handbook.
COPYRIGHTS for books, charts, maps, etc., quickly procured. Address
MUNN & CO., Patent Solicitors.
GENERAL OFFICE: 361 BROADWAY, N. Y.

INTENDING ADVERTISERS should address
GEO. P. ROWELL & CO.,
10 Spruce Street, New York City.
For SELECT LIST OF 1000 NEWSPAPERS
Will be sent FREE, on application.

A NEW DEAL!

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

SATURDAY, MARCH 23.... 1889

BORN.

HUTCHINGS—At Bishop Creek, March 11, 1889, to Mr. and Mrs. James Hutchings, a daughter.

DIED.

HICKS—At Fresno, March 12, 1889, John D. Hicks, aged 64 years.

George Lewis came up on the train Tuesday morning.

Dr. Foley started for San Francisco last Tuesday.

Several San Francisco gentlemen have been in town during the week.

The storm has entirely cleared away and the weather is most delightful.

George White, Master Builder of the C. & C., was in town during the week.

The meadow larks perform a daily cantata with the blackbirds for orchestra.

There was'nt much style about those mules but they got there just the same.

Mrs. Tynan has returned home after a lengthy visit with relatives at Big Pine.

Israel Rittgerrs, of Lone Pine, expects to start for Kern county in a few days.

The river at Sacramento registered nineteen feet and eight inches after the late rain.

Young Mitchell "knocked out" Sailor Brown in twenty-one round at San Francisco.

Mrs. Thomas B. Gunning, daughter of Leland Stanford, has been granted a divorce.

H. H. Spear, of Bishop, passed through town on Thursday en route for Mojave with a big team, going after merchandise.

John F. Swift has been appointed Minister to Japan. M. M. Estee is talked of as Collector of the Port for San Francisco.

O. I. Mairs started for Los Angeles last Tuesday. He will be back about the end of next week, C. Mulholland returning with him.

Herb. Hartshorne was down from Bishop early in the week on business connected with the settling the estate of his brother, lately deceased.

Mr. T. H. Flagler came up from Keeler on Thursday morning, returning next day. Mr. Flagler is Master Mechanic of the Soda Works at Keeler.

August Schnoke came down from Bishop during the week and was in town a day or two. He states that his brothers have leased the Tibbetts and Curtis ranches.

Harry Jiggens and Paul Myrtengreen are on their way to Mojave for a load of freight. This is the third trip made by an Independence team and the work will be continued.

Religious services will be held at Lone Pine next Sunday at 10:30 a. m.. Sunday school at 11:30. Preaching at Independence at 7 o'clock p. m. Sunday school at 11 a. m.

"If a man bloweth not his own horn verily it shall not be blown." That is, when it's worthless. When a man is compelled to "toot" for himself the end is near at hand.

Mr. Celayo, of Lone Pine, has shipped about four tons of ore from the old Cervantes mill below for reduction. Some of the ore had been partially smelted and all of it had been worked over without extracting the bullion. The ore is of good quality and will no doubt net a handsome return.

Mr. Frank Humphreys, representing the wholesale firm of M. A. Newmark & Co., of Los Angeles, made a trip through the valley this week. Considering that this is the first effort made to secure the Inyo trade for Los Angeles his trip may be regarded as quite successful. No great amount of business can be expected however, until a railroad is built to Mojave.

The 17th

The St. Patrick's Day ball at Keeler was what everybody expected, a complete success. The attention to the guests and the supper was all that could be desired and the music was unexceptionally the best ever heard in the valley. The hall was too small to accommodate the number who attended but the company was good natured and enjoyed themselves to the utmost. In all probability the Keeler Orchestra will be secured for the coming Odd Fellows' ball on the 26th of April. If this is done it will prove a most attractive feature of the entertainment.

A Successful Enterprise.

The Stevens Ditch Company have filed articles of incorporation. The capital stock is placed at $45,000, divided into 4,500 shares. Messrs. A. C. Stevens, President, H. L. Clark, Secretary, J. V. Skinner, W. H. Jenkins and H. J. Robinson constitute the Board of Trustees and own all the stock. The ditch is completed and carries 4,500 inches of water. This ditch is the result of pluck and enterprise on the part of the projectors. It is much to be regretted that Colonel Stevens did not live to see his efforts thus crowned with success.

Fair Appropriation Passed.

On Thursday afternoon of last week a telegram was sent to Hon. Cyrus Coleman, at Sacramento, asking him whether or not an appropriation had been passed for the Eighteenth Agricultural District. The following answer was received on Saturday afternoon, too late for publication last week:

SACRAMENTO, March 16, 1889.

IRV. H. MULHOLLAND.—Eighteenth District appropriation, six thousand dollars. Stock license law retained.

CYRUS COLEMAN.

As soon as the Secretary, C. Mulholland, returns from Los Angeles money will be raised to meet all outstanding bills against the Association and immediate steps taken toward preparations for the fair next fall. The license law alluded to in the telegram is the power vested in the Board of Supervisors to pass ordinances whereby all stock grazing in the county must pay a license tax. Mr. Coleman has attended closely to the interests of his constituents and is entitled to the warmest approbation.

VALUABLE INDUSTRIES.

Mr. Israel Luce visited the INDEPENDENT on Wednesday on his way to the marble quarry returning from a short visit to his home at Sacramento. Mr. Luce has been on the Coast since '49 and is probably as familiar with the State as any man in it. He says there is no country on the Pacific Slope that has so many natural advantages as Owens Valley; soil, water, climate, mountain scenery, minerals and other resources. We have here a vast mineral region that capital will develop and agricultural possibilities that will not alone supply our home market, but quantities of produce can be shipped to Los Angeles when railroad connection shall be secured. A great deal of attention is now being attracted to this valley and enterprises have been on foot for two years past that will work great results. A visit was made during the week to the marble quarry at Swansea. There is a mill there now with two gangs for sawing blocks and various other apparatus. The present manner of driving the machinery by steam is found to be too expensive and Mr. Luce states that the company will endeavor to secure a location at the fall in the Eastside canal and erect extensive works there. Failing in this the mill will be built at Reno. The managers of the Eastside canal and the citizens of the valley should see to it that the mill is located here. A large number of men will be employed and our market benefited thereby. Taxable property will accumulate and the whole county will be gainer. Above the mill, on the side of the mountain, eight experienced quarrymen are now at work uncovering large blocks of marble. Blocks that will weigh upward of forty tons have been rolled down. There is now uncovered and ready for blasting out a block of pure white marble thirty feet high. Columns for architectural purposes and shafts for monumental work can be obtained at any length that the facilities for transportation will permit. The Swansea marble is especially fitted for these purposes as the atmosphere has no perceptible effect on it. This enterprise alone will be of incalculable benefit to the county. The work is getting to a state where shipments can be made, and once in the market the demand will be great while the supply is practically inexhaustible. A number of specimens were brought up and can be seen at this office. Some are pure white, some yellow, mottled, green, moss-agate, and other beautiful crystallizations. Some very fine specimens of onyx were also seen at the quarry.

About a mile east of the marble works, in the Inyo range, is the Swansea Belle mine. Farther east and higher in the range is the Flagstaff mine, owned by Mr. C. Meysan, of Lone Pine. The ledge extends in a northerly and southerly direction and standing on a hill near the shaft the croppings can be seen for a long distance. The dip of the ledge is to the west but it is very nearly perpendicular. A shaft is sunk on the vein to a depth of 155 feet and considerable ore has been shipped. About 100 feet from the surface a drift was started and an ore body is now in sight. The ledge is about four feet wide, in clay casings. The walls are clearly defined and firm, making but little timbering necessary. The ore is soft and most of the work can be done with a pick. The first-class ore assays over 600 ozs silver per ton and $20 in gold. The second-class assays about 200 ozs. silver per ton. The mine is now being worked under lease. About 500 yards north of the Flagstaff shaft is the Coalburner mine. This ledge dips to the east and cross-cuts the Flagstaff ledge at a depth of about 200 feet. A tunnel has been run on the ledge for a distance of 80 feet a number of ore bodies opened up. About 20 feet from the mouth of the tunnel a shaft has been sunk on the ledge over 100 feet. The ledge is three feet wide in the tunnel and widens out in the bottom of the shaft. Sinking about 150 feet further will probably crosscut the Flagstaff ledge and open up a large ore body. Higher up the hill from the Coalburner tunnel and below the Flagstaff croppings is a slide from which ore is now being taken for shipment. Were these mines the property of a company with means to develop them there is no question but that a large and valuable property would be opened up. There is a wagon road to the mines and they are only three miles from the railroad, making shipment very easy. The parties who have the properties leased cannot afford to make extensive workings. They open up small ore bodies near the surface and make shipments which net good returns. But to develop the mines thoroughly capital is required. This, however, time will bring about and a prosperous mining region developed.

There are quite a number of men employed at the soda works. The new windmill for pumping the lake water into vats works quite successfully. Several large sheds are being erected for storing the soda from the weather. This enterprise has passed beyond the experimental stage and is on a firm basis. Of course the industry is yet in its infancy and will assume much larger proportions, the fact being established that the work can be continued at a profit. When better railroad facilities are secured extensive improvements will be made. Both the quarry and the soda works are resources that will endure for ages. These enterprises alone will make a market for a considerable portion of the valley products, and that there are many good mines undeveloped is beyond question. There is a great deal of idle capital in the State that the recent effort to bring the valley into notice will attract here for investment. That it has not been done before is because it was not generally known what great natural advantages are here.

Messrs. Conn & Trudo have located 1120 acres of borax land in Saline Valley and will work the property extensively. A wagon road has been built to connect with the Big Pine road to Deep Spring. Considerable machinery has been shipped in and buildings are being erected. They have named the settlement Ferndale. The industry promises to be of considerable importance and will still further increase the demand for valley products. A number of men will be employed at the works and teams will be required to haul the borax to the railroad. This will make a market for garden produce and hay and grain and also assist in lowering the rate of taxation.

Give Them a Trial.

The house of Newmark & Company is one of the oldest and wealthiest in Los Angeles. The firm has a reputation for enterprise, and what is of more value, for honor and fair dealing, that does credit not to themselves alone, but to the City of Los-Angeles. Newmark & Co. carry a stock of goods not second to any on the Pacific Coast. They very earnestly desire to get a share of the trade of Inyo county and will be found ready to extend every courtesy to our merchants that can in reason be expected. The best way to test the sincerity of the firm, and their ability to fill orders, is to send them a trial order. See their advertisement.

COURT NOTES.

Superior Court of Inyo County, California, Hon. John. John A. Hannah, Judge.

MONDAY, March 18th.

Grant vs. Walker—Stipulation filed extending Plaintiff's time to answer or demur to Defendant's answer and cross complaint.

Estate of H. J. Hartshorn, deceased—Herbert C. Hartshorne appointed Administrator. Appraisers—David Levy, Robert O'Neal and A. M. Given.

TUESDAY, March 19th.

Munzinger vs. Munzinger—Action for divorce. Argued by counsel and judgment rendered for plaintiff, Louis Munzinger. Custody of minor child awarded to Plaintiff.

WEDNESDAY, March 20th.

Estate of John B. White, deceased—Appraisers—J. J. Gunn, J. W. Murphy and L. Wood.

Odd Fellows' Ball.

The Odd Fellows' Lodge at Independence is already making preparations for the celebration of the 70th anniversary of their order, at Independence, on the 26th of next month. Exercises will be had during the day at the Pavilion. P. W. Forbes, Esq., of Bishop, will deliver an oration. The best music that can be obtained will be secured, and the ball will be given in the Pavilion. Outside towns will be well represented and an interesting and enjoyable occasion will be had. See the advertisement.

Tourists

Whether on pleasure bent or business, should take on every trip a bottle of Syrup of Figs, as it acts most pleasantly and effectually on the kidneys, liver and bowels, preventing fevers, headaches, and other forms of sickness. For sale in 50c and $1.00 bottles by all leading druggists.

Young or old, married or single, sick or well, it will be most useful book ever published. Address WHITTIER, St. Louis, Mo.

ALLEN GRAY;

— OR, —

The Mys'ery of Tur'ey's Point.

Being a Few Romantic Chapters From the Life of a Country Editor.

BY JOHN R. MUSICK,

AUTHOR OF "WALTER BROWNFIELD," "HELEN LAKEMAN," "BANKER OF BEDFORD," AND OTHER STORIES.

[*Copyrighted, 1888, by the A. N. Kellogg News paper Company.*]

"There is another point where the critics might attack you," said Allen.

"Where?" asked Toney, beginning to shrink himself.

"In the next to the last line there is an incongruous association of roses and cauliflowers."

"It is a blending of the beautiful and practical."

"Roses are beautiful and cabbage useful, it is true, but there seems to be an incongruity in their association that might subject you to criticism. Besides, one blooms in the spring, and the other usually matures in autumn."

"Well, if you think that piece won't do, I'll read you one on the brooklet," said the author.

There was no escape, and Allen told him to proceed.

"Laughing, bubbling, bright and clear,
Gushing, dimpling little brook,
Gurgling, murmuring, sad to hear,
How you tempt me from my book;
Dashing, sparkling ever on,
Skipping, jumping, still you go,
Laughing, bubbling, gushing, dimpling,
Flashing, whispering, groaning, simpering,
Gurgling, murmuring, still you go."

"How d'you like that?" the poet asked, giving the editor a precarious look.

"That's better."

"D'you really think so?"

"Yes—decidedly."

"Well, suppose you use that?"

"Very well," and, without further reading, the *Brooklet* was laid aside as accepted.

"HOLD ON, TONEY!"

"Well, now, I'll read another."

"What is the title?"

"*The June Apple Tree.*"

"I don't like it."

"We can change it if you wish. This is an elegant bit of blank verse which I dashed off." He read:

"'High up 'mid the branches
Gazing at the far-off moon,
In gorgeous splendor
And wisdom solemn mast,
Sittest the undisconcerted owl—'"

"Hold on, Toney," cried the editor, "never allow any thing so sublime as that to appear in a newspaper. Send it to the best publisher in the land, have it copyrighted, or it may be stolen from you."

The author glanced at the editor as if he half doubted his sincerity. If Allen had not had excellent control over his feelings he could not have refrained from laughing. Toney's excellent opinion of his own talents as a poet blinded him. He laid the gem aside, determined to send it to *Harper's*, and drew another which he thought more common place, and read:

"Oh, speak not of splendors, of sorrow and pain,
Of happiness etherial, of England or Spain;
Oh, tell not of anguish, your hopes or your fears,
Come to me in gladness, with laughter or tears."

"That poem is too deep; our readers would never be able to fathom it," said the editor. Not having been able to fathom it himself, Allen supposed that few at least of the *Western Republic* readers could.

Toney then selected two small verses of doggerel, meaningless stuff, which he called sonnets, gave them to the editor, almost freezing the blood in his veins by the announcement that he would soon have a serial story ready for the *Western Republic*, and left the office.

Allen suspected that the story was already written, and had been rejected by every publisher in the land. Of course Toney would insist that it was an excellent story, and that as soon as it appeared in print would take the world by storm.

Having got rid of the poet, the publisher went to assist in making up the form, when Tom Simmons entered.

"I'say, Mr. Gray, I don't think there need be any more delay in my announcin' myself as a candidate," he said, throwing his hat on the folding-table and seating himself in a chair.

"It seems early," returned the editor.

"But delays are dangerous. Some one may get ahead of me."

"Of whom are you afraid?"

"Thar's George Strong—"

"But he belongs to a different political party."

"It makes no difference," said Simmons, impatiently. "He's in my way and I intend to rise in spite of him. If I go to the Legislature I'll give me the inside track for Congress, don't ye see; and if I git in Congress it's only a step to President o' the United States. You know when a feller gits to goin' up there's no tellin' how far he'll go."

To sensible natures this man's egotism was simply disgusting. In order to change the subject Allen asked him the price he asked for the corner building near the printing office.

"D'you want to buy it?" asked Simmons."

"I might."

"A thousand dollars."

"I will see about it."

A few moments later Simmons left the office.

CHAPTER IV.

THE STROLL—A MYSTIC BEAUTY.

To Allen Gray it seemed as if Strong and Simmons were constantly watching each other, to thwart one another's plans. However, it may only have been by accident that Mr. Strong came into the office just an hour after his political opponent's visit. Having seated himself, Strong said:

"There isn't any doubt, Mr. Gray, that Simmons is onto my racket. He knows I'm gwine to run for sheriff, an' he'll beat me if he can."

"I don't think he knows any thing about it, Mr. Strong," said the editor.

"Yes, he knows; I tell ye yer mistaken. That man is just watching me all the time. He's always tryin' to spile my plans. I believe the devil owes me a spite an' is payin' me off with bad neighbors. Wasn't he in here to-day?"

"Yes, but we were talking on a business matter," said Allen, with some hesitation, "I wanted to buy that corner lot of his."

"Yo did. What did he ax yo?"

"One thousand dollars."

Mr. Strong gave a prolonged whistle, "That's more'n twice what it's wuth. I wouldn't give him three hundred dollars fur it; fur the house is no account at all."

Three or four days later, when Mr. Strong had almost induced Allen to purchase some of his property, Tom Simmons, having heard of it, determined to "spoil the trade," if he had to injure all the property in Turley's Point to do so. A large number of the citizens of Turley's Point seemed to be watching each other, trying to prevent their neighbors' success, even to their own detriment. As nearly every body seemed pulling against every body else, the business outlook of the village was not bright.

On Sunday afternoon Allen Gray determined to set all warnings and rumors of danger aside and take a stroll to the hill on which the mysterious stone house stood. It was a delightful day, and he found the woods pleasant. The trees were clothed in their richest green, and wild flowers nodded their saucy heads in the gentle breeze which stole through the forest. The nimble squirrels ran before him, frisked about among the branches or chatted from some leafy retreat. He followed an old disused carriage road, once macadamized and an excellent thoroughfare, but now in a dilapidated state, and partially overgrown with grass. The grim old forest on either side of him seemed dark and gloomy.

The distance was much greater than Allen had supposed. Though the top of the old stone house could be seen from the village, he lost sight of it the moment he entered the wood. Having paused to rest at the foot of a long hill, he discovered a narrow but well-worn path leading off at right angles through the trees, and decided to follow it. Through a forest of grand old moss-covered oaks, winding about among huge masses of rock which in centuries past had tumbled from the bluff above, the path took its course until he found himself at a delightful spring of clear, cold water at the foot of the hill. Here Allen paused and gazed about him.

On his right beneath a wide-spreading beech was an old rustic seat. It had evidently been there a great many years. Lovers may have sat there and breathed vows with only the gray old forest to hear them, long before he was born.

At one time the whole forest seemed to have been a grand park, but allowed to run wild, it had become a labyrinth of tangled undergrowth and vines. Throwing himself on the rustic seat Allen gazed into the spring, which, gushing out from the side of the hill, formed a sparkling rivulet that glimmered over a bed of many colored pebbles. This cool retreat was a haven of rest to the tired editor, and he flattered himself that here he might frequently find security from the persecutions and annoyances of poets and politicians.

But the afternoon was wearing away, and as he had determined to visit that mysterious old stone house, he could waste no more time at the spring.

As he rose to return to the main road, something bright on the side of the path caught his eye. He stooped to see what it was, and discovered a golden chain partly covered with leaves and dirt. He drew it out and found buried beneath the leaves, but attached to the chain, a golden locket. It was a lady's locket, and Allen knew at a glance that it did not belong to any one at Turley's Point.

"What shall I do with it?" he asked himself. "Keep it and advertise it? That is the best I can do; but suppose I open it and take a peep within."

He pressed his thumb on the spring and the lid flew open, revealing only a short tress of soft, golden hair, which had evidently been clipped from the head of a child.

"That reveals nothing," said Allen, closing the locket, putting it in his pocket and starting back to the road, tapping the leaves with his slender cane.

Reaching the main road he ascended the hill toward the great house. The road between the spring and top of the hill bore some evidences of recent travel. He had nearly reached the top of the hill when he found a lady's kid glove lying at the side of the road.

The glove was too small and of a quality too fine to belong to any of the women whom he had met in the village.

"Of two things I am certain," soliloquized Allen. "There is a lady at the stone house on the hill, and she takes strolls."

Allen began to wonder what kind of a person she was. Was she young or old, beautiful or ugly?

The top of the hill was reached, and he found himself on a broad plateau with a large, magnificent mansion before him. A high wall, on the top of which were sharp iron pickets, surrounded house and grounds as far as he could see. The gate was tall, surmounted by a high arch supported by pillars of stone. All the nursery stories of enchanted castles which he had ever heard or read came with wonderful freshness to his memory. There was something so grand and yet so weird in that imposing pile, reared as it seemed in the very heart of the wilderness, that Allen was inspired with a feeling of awe, if not fear. For some time he stood gazing at the vast building. Then he went a little nearer, and from a slight eminence could see fountains playing on the lawn, while the gentle breeze came to him laden with the fragrance of sweetest flowers. Notwithstanding the grandeur and beauty of the house and grounds, there was something so weird and strange about them that he felt strongly inclined to retreat.

"Oh, pshaw! I am getting almost as silly and superstitious as the villagers," said Allen to himself.

After examining the front as well as he could, he decided to walk completely round it. Those people might have good reasons for living lives of seclusion, and he would not question their rights. That they were people of refinement and taste the palatial residence and fairy-like grounds were ample evidence. They might be even better than represented. The people at the village had doubtless misconstrued their conduct, and given their neighbors on the hill worse names than they deserved.

With these thoughts in his mind Allen wandered around to the rear of the great mansion and halted. The great wall inclosed about ten acres, and from what little Allen could see of the grounds they seemed in excellent order. The wall in the rear was boards two inches thick and eight feet high, and through the cracks the editor had a very good view of the garden.

A well-worn path, leading from the garden gate to the river bluff a fourth of a mile away attracted Allen's attention, and, wearied with gazing at the house, he thought to go to the bluff and watch the sunset.

He had almost reached the great cliff when he came to a sudden halt and stood transfixed with amazement. There, standing on a grass plot, gazing across the dark river beneath, was a beautiful girl about eighteen years of age. She was very pretty, with large blue eyes, a wealth of golden hair and a form which might have been the envy of a sculptor.

HE CAME TO A SUDDEN HALT.

Her eyes were fixed upon the river, and she was not yet aware of his presence. As the rays of the setting sun fell upon this angelic being, Allen thought he had never seen one so lovely. That she was an inmate of this wonderful house seemed to give an additional charm to her beauty, and he found his heart beating with a hitherto unknown emotion.

At last the sun dipped behind the tree-tops across the river, and, heaving a deep sigh of regret, the young lady turned to retrace her steps homeward, when she discovered a handsome young stranger standing in her path.

CHAPTER V.

ARMING FOR THE CONFLICT.

It was difficult to tell who was the most confused, Allen Gray or the beautiful girl before him.

Her dress and manner indicated culture and refinement, and he felt that he must apologize for his presence.

"I—I beg pardon!" he stammered, after an awkward silence of a few moments. "I came for a stroll to the bluff, not aware of your presence. I hope I have not annoyed you?"

There was an honest frankness in his voice and manner, more reassuring than his words. A change from surprise and terror to pleasure, as instantaneous as it was remarkable, came over her face.

"Oh, don't blame yourself, sir," she said, in tones the sweetest that ever fell on mortal ears. What a delicious voice, how like the chime of a silver bell. Then, as if not altogether recovered from her surprise, she stammered: "I—I was watching the sunset."

"It is a delightful view from here," said Allen, recovering at once his self-possession. "I do not wonder that you came here to witness it; I came for the same purpose, but seeing you, and not wishing to disturb you, remained in the background."

"You have lost much," answered the beautiful girl, her angelic face wreathed with smiles. "I frequently come to this bluff to visit the sunset, and the scene never grows old."

"No doubt, were I near enough. I would do the same."

"You are the new editor at the village, are you not?" she asked, with charming childlike simplicity.

"I am; my name is Allen Gray, and I am editor and proprietor of the *Western Republic*. You live in the stone house on the hill, do you not?"

She started, a death-like pallor swept over her face, and in a confused manner she answered:

"Yes, sir."

It was painfully evident that the stone house on the hill was an unpleasant topic to this young lady; therefore Allen determined to avoid it. He began praising the beauties of the sunset sky, the grand old forest and delightful flowers.

"I found some things to-day in my rambles," he at last said, "and may be you can tell me who is the owner." He drew from his pocket the glove and locket. "Do you know whose these are?"

With a glad smile upon her face she came quickly to his side and said:

"They are mine. The glove I lost this morning; the locket was lost two weeks ago. Where did you find them?"

He told her all about finding them, and then, both having regained their equanimity, they became absorbed in a pleasant conversation. It seemed as if they had known each other for years. Little heed was taken of the flight of time. Twilight shades were long held in the background by the broad face of a full moon shining from a cloudless summer sky. There was such a strange fascination about each of the other that they did not notice that the stars were winking at them from the heavens above.

When Allen asked what her name was another momentary confusion seemed to come over her, as she answered *Bertha Collins*; but by his admirable tact the confusion was but momentary, and she was discoursing as pleasantly as before. Those moments seemed to possess a world of pleasure to Allen and will never be blotted from his memory. This lonely creature, whose beautiful face and golden hair bathed in moonlight seemed angelic purity itself, produced such an effect upon him as to electrify and change his whole nature. The dark mystery, which hung like a pall above her, seemed to only heighten the charm which made her so attractive.

Almost unconsciously they walked down the path to the garden gate. Allen knew not of what they talked, he only seemed to realize that he was in the presence of one on whose beauty he could feast his eyes forever, and to the music of whose voice he would never grow weary of listening.

Her disposition, when not freighted with a strange, mysterious dread, was happy, and her laughter fell like ripping music upon his enraptured ear. But all things must have an end, and this charm, delightful as it was, must be broken.

They reached the point where their paths lay in different directions, one to the gate of that great, gloomy old house, the other around the enclosure to the village.

"I must go in now," she said, her face becoming just a little clouded. "It is growing quite late, and I can not longer remain out."

(TO BE CONTINUED.)

Germany should be careful—"We fight mit Sigel."

Postmaster Hill Got $15,000.

In the telegram from New Orleans, which was published in *The Statesman* on the morning of December 19, and which gave the account of the grand mammoth drawing of the Louisiana State Lottery, it was announced that Manor, Tex., had fallen heir to a portion of the $600,000 prize. Such was indeed the case, and the lucky holder of one-fortieth part of the ticket was Postmaster John E. Hill, and no more deserving man could have received it. Mr. Hill is personally a friend to every citizen of Manor, his pleasant manners and genial courtesy to all, whether in business dealings or social intercourse, having made him a general favorite.

He has been a resident of Manor about three years, having come there from Tennessee, he having several relatives living in Manor.

Although a staunch Democrat (his father having been killed while serving in the Confederate army), Mr. Hill has the unanimous endorsement of the citizens of Manor for re-appointment.

With part of the money he drew last month he has bought a farm of 400 acres for $10,000. The ticket he held was collected through the State National Bank of this city from whom it was learned that the money was received promptly by them and promptly delivered to Mr. Hill.

It might be added that the "newspaper luck" is now broken. Mr. Hill is the collecting agent for *The Statesman* at Manor, and newspaper men everywhere may now expect to win the capital prize. —*Austin* (Tex.) *Statesman*, Jan. 17.

Visitors to San Francisco should not fail to visit the famous Louvre, on the corner of Market, Eddy and Powell streets, and the little Louvre, corner of Market and Grant avenue. They keep imported beers from every market in the world, besides the best brands of liquors and wines and a restaurant department which has no superior.

Dujardin's Life Essence has restored vigor to hundreds of old young men who have exhausted their vital forces by dissipation, and other bad practices. It has given back youthfulness and strength whenever used. Price, $1.50 a bottle. All druggists.

STILL MAKING FLINTS.

An Antiquated Industry Kept Alive by the Savages of Africa.

It is difficult to believe that in these days of repeating and magazine rifles, when a flint-lock gun or pistol commands a fair price as a curiosity, there should be actually existing in England a considerable industry in the manufacture of gun flints; and when we add to this a largish business in strike-a-lights or tinder box flints, the fact is still more remarkable.

The chief center, if not the only remaining center, of this manufacture is the picturesque little town of Brandon, in Suffolk, which has been engaged in this line of business from immemorial time. Not only did the chief supply of gun flints and tinder box flints come from this spot during the long period when Englishmen lighted their candles and fought their battles with flint and steel, but long, very long before—before guns and candles and iron, and even bronze, were known to the inhabitants of these islands, Brandon was celebrated for its superior quality of flint, as it is to-day, and there is abundant evidence to show that from the prehistoric period down to the present day, there has hardly been a break in the gathering and preparing flint for the wants of man at this spot.

It will be, no doubt, asked who uses gun flints now? The answer is, the natives of Africa, to whom we have philanthropically traded our obsolete flint lock muskets and rifles, to enable them to kill each other—and occasionally ourselves—more commodiously. The fine flints quarried and shaped at Brandon, are packed in kegs and exported to the various parts on the east and west coasts of Africa, whence they find their way into the interior for barter with the natives.—*St. James' Gazette.*

THE AGONIES OF LUMBAGO.

W. S. Phillips, East River National Bank, New York, writes:

"It gives me great pleasure to add my testimony in favor of your valuable plasters. Last October I had a very severe attack of Lumbago, and suffered untold agony; could not turn in bed or get in any position without assistance, and with pains almost unbearable. The folks suggested ALLCOCK'S POROUS PLASTERS. As soon as possible I had one applied to the small of my back, and to my great surprise I experienced almost instant relief; I continued wearing it until entirely cured, and am happy to say that I have not had the slightest symptoms of Lumbago since. They are a wonderful and valuable plaster for Lumbago, and I take much pleasure in recommending them."

Epitaph for a Photographer—"Don't Move."

THE CHILL BLAST

That sets the naked branches a-quivering, is not felt by the wealthy valetudinarian indoors, but not all the covering that can be piled on his warm bed, nor all the furnace heat that anthracite can furnish, will warm his marrow when chills and fever runs its icy fingers along his spinal column. Hostetter's Stomach Bitters is the thing to infuse new warmth into his chilled and aguish frame, to remedy the fierce fever and exhausting sweats which alternate with the chill. Dumb ague, ague cake, bilious remittent—in short, every known form of malarial diseases is subjugated by this potent, and at the same time, wholesome and genial medicine. Biliousness, constipation, dyspepsia, sick headaches, loss of appetite and sleep, kidney trouble, rheumatism and debility are also remedied by it. Use it with persistence to effect a thorough cure.

Rich relatives are like wine—they grow dearer with age.

For the Cure of a Cough or Sore Throat, "*Brown's Bronchial Troches*" are a simple remedy.

If afflicted with Sore Eyes, use Dr. Isaac Thompson's Eye Water. Druggists sell it. 25c.

DWIGHT'S SODA THE COW BRAND.

— TO MAKE —

DELICIOUS BISCUITS OR WHOLESOME BREAD

USE

DWIGHT'S COW-BRAND SODA OR SALERATUS.

ABSOLUTELY PURE.

ALWAYS UNIFORM AND FULL WEIGHT.

Be sure that there is a picture of a *Cow* on your package and you will have the best Soda made. THE COW BRAND. DWIGHT'S SALERATUS

THE SPRING MEDICINE YOU WANT

Paine's Celery Compound

Purifies the Blood,
Strengthens the Nerves,
Stimulates the Liver,
Regulates the Kidneys and Bowels,
Gives Life and Vigor to every organ.

There's nothing like it.

"Last spring, being very much run down and debilitated, I procured some of Paine's Celery Compound. The use of two bottles made me feel like a new man. As a general tonic and spring medicine, I do not know its equal." W. L. GREENLEAF, Brigadier General V. N. G., Burlington, Vt. $1.00. Six for $5.00. At Druggists.

Use It Now!

"Having used your Paine's Celery Compound this spring, I can safely recommend it as the most powerful and at the same time most gentle regulator. It is a splendid nerve tonic, and since taking it I have felt like a new man." R. E. KNORR, Watertown, Dakota.

WELLS, RICHARDSON & Co. Props. Burlington, Vt.

DIAMOND DYES Color Feathers and Ribbons, Easy! Elegant! Economical! | LACTATED FOOD Babies using it sleep well nights. Wake Laughing.

ARM & HAMMER BRAND

To Housekeepers and Farmers.—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons, which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK CHURCH & CO'S SODA ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound packages *full 12 ounces* net. Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

SODA OR SALERATUS

A PROMINENT MERCHANT IN TROUBLE.

Old moneybags mopes in his office all day,
As snappish and cross as a bear;
The clerks know enough to keep out of his way,
Lest the merchant should grumble and swear.
Even Tabby, the cat, is in fear of a cuff,
Or a kick, if she ventures too near;
They all know the master is apt to be rough,
And his freaks unexpected and queer.

What makes the old fellow so surly and grim,
And behave so confoundedly mean?
There's certainly something the matter with him—
Is it stomach, or liver, or spleen?
We've guessed it—his liver is sluggish and bad,
His blood is disordered and foul.
It's enough to make any one hopelessly mad,
And greet his best friend with a growl.

To correct a sluggish or disordered liver, and to cleanse and purify the blood and thereby sweeten the temper, Dr. Pierce's Golden Medical Discovery has no equal. It improves digestion, builds up the flesh, invigorates the system, dispells melancholy, and makes life worth living.

IT IS GUARANTEED to benefit or cure, if taken in time and given a fair trial, in all diseases for which it is recommended, or the money paid for it will be refunded.

SIAM'S DANCING GIRLS.

A Spectator Describes Some of Their Graceful Performances.

Poised on tip-toe, bending their limbs back as far as they will reach and picking up bits of straw with their eyelids, the dancing girls of Bangkok are always exercising in the royal gymnasium. The new volume in the Zigzag series, "Journeys in the Antipodes," gives a very graphic description of the wonderful physical training of these girls, whose ages vary from five to twenty years. The curious and subtle feat of picking up a bit of straw with the eyelids can be learned only by the youngest of them, who are made to practice it in order to render them flexible in every part of the body.

There are two long rows of benches, one a little higher than the other. On the lower is a row of little girls and on the upper bench are laid fine polished bits of straw. At the sound of the drum the little girls altogether bend the head and neck until they touch the bits of straw, which with wonderful dexterity they secure between the corners of the eyelids.

The cup dance is the most graceful and poetic of their dances. A row of young women with a tier of cups on their heads take their places in the center of the gymnasium. A burst of joyous music follows. On hearing this they simultaneously, with military precision, kneel down and fold their hands, and bow their heads until their foreheads almost touch the polished marble floor, keeping the cups steadily on their heads by some marvelous jerk of the neck. Then suddenly springing to their feet, they describe a succession of rapid and intricate circles, keeping time to the music with their arms, head and feet.

Next follows a miracle of art such as may be found only among people of the highest physical training. The music swells into a rapturous tumult. The dancers raise their delicate feet, curve their arms and fingers in seemingly impossible flexures, sway to and fro like withes of willow, agitate all the muscles of the body like the flutter of leaves in a soft evening breeze, but still keep the tier of cups on their heads. At other times a cup full of some liquid is placed on the floor in the center of the hall. A girl will spring to her feet and dance about it in round wild eddies, and suddenly laying herself down, keeping her arms folded tight on her breast, will take up the cup with her lips and drain the liquid without spilling a drop.

WANAMAKER'S PICTURE.

How the Only Existing Photograph of the Noted Philadelphian Was Taken.

John Wanamaker, the millionaire merchant prince of Philadelphia, has a deep-seated objection to sitting for a portrait. He has repeatedly declined the overtures of his family and friends who are anxious to secure a counterfeit presentment, and up to the present time it is not known that his features have been transferred to paper in any regular manner. A year ago, however, Mr. Wanamaker was a passenger on one of the North Lloyd steamers from Europe to New York. During the voyage he was frequently surrounded by a bevy of frolicsome girls, who made as much of him as they would of the most eligible beau at a fashionable watering-place. They were, in fact, more attentive than the proprieties warranted. One of them in particular hung around the Philadelphian's steamer-chair almost every time he appeared on deck, and her marked attention caused a great many jokes to be cracked at her expense. Among the passengers was a passenger who had traveled extensively in Europe for an Eastern newspaper, and who had procured one of those small detective cameras which is concealed in an apparently innocent button on the coat itself. Seeing this young lady around Mr. Wanamaker, the newspaper man determined to catch a photograph, and one bright afternoon he stepped in front of them just as a lurch of the ship threw the young lady into Mr. Wanamaker's lap. The focus was just right, and the telltale machine was snapped on the instant. It happened, however, that the Philadelphia man moved his head just as the chemicals were getting into their deadly work, so that his features are not well defined in the negative; but the position is perfect, and the outline of the young lady's face, as well as the figure of the millionaire, are brought out in strong lines. It is the only known photograph of John Wanamaker extant.—Washinton Letter.

Difficulties in Trousers.

Speaking of trousers reminds one that they are the most difficult garment in a man's wardrobe to get on comfortably with, in a philological sense. There are large sections of the country where they are degraded by being called "pants." Even in cities they have their defamers, persons who never speak of them by their correct name. These persons frequently speak of themselves as "gents," and wherever there are "gents" you will hear of "pants." The waistcoat has had its nomenclatural troubles, too; but never has any name so inelegant and offensive been bestowed upon it as is applied to trousers by those who call them "pants." "Vests" is not the name it prefers, although "vest" is not a departure from the proper name too terrible to be borne. Even the good old-fashioned word "overcoat" is being driven from its citadel. In circles where clothes are matters of great moment "top-coats" and "great-coats" are mentioned, but "overcoats" are seldom heard of. Words have their fashions as well as garments.—Dress.

IS MARRIAGE A FAILURE?

The Great Question Settled in a Few Suggestive Parables.

Once upon a time Jacob married Ruth and they set up housekeeping.

Now it came to pass that Jacob became penurious and laid up the proceeds of his crops and stock in his own pocket, and it also came to pass that Ruth was somewhat troubled for pin money. Her money went unto the grocer, and her eggs and hens were of no avail, for Jacob took them to market.

And Ruth grew shabby in dress and pinched in face. Her gowns were turned even unto the third time, and the neighbors laughed at the ancient bonnet.

And Jacob prospered and grew fat in houses and lands, and drove fast horses, and speculated. And Ruth wept sorely that it was so, that in her own home she was a beggar. And Ruth and Jacob were old and died; and his heirs quarreled over the goods that were left.

II.

Once upon a time Susan married Elisha, and they set up boarding, for Susan loved not labor, and Elisha wrought hard with the plane and saw, a carpenter by trade. And it came to pass that Susan visited much, and bought silk gowns and banged her hair and she loved laces and bonnets.

Elisha loved his wife, and gratified her in all ways. His coat grew threadbare, and he discarded collars, insomuch that Susan became ashamed of Elisha's shabbiness and bemoaned her evil lot.

And it came to pass that a rich stranger saw her face, and wondered at the ill-mated pair, and took Susan to the opera, and Elisha grieved that it was so, and began to hate all women; and the lawyers granted a divorce, and Susan departed with the stranger, and Elisha departed also and died in a distant land.

II.

Now, in this same town, Edward married Sarah, and they rented a farm, for they had no land. And Sarah sang at her work and Edward plowed in the field, and the crops were abundant, and Edward said unto Sarah: "What is mine is thine, and what is thine is mine. We two have one purse and one interest."

And Sarah was prudent and loved her husband, and they laid up money together, and sometimes Sarah carried the gold that was saved, and sometimes Edward, and Edward trusted Sarah more than himself, and they bought lands and prospered, and while still young their abundance was such that out of their bounty they clothed the poor, and bought pictures and beautified their home. And people wondered at her happy face; and they rode in a carriage that was not "yours" nor "mine," but "ours." And they lived to a good old age and died amid their children.

Here you have this all-absorbing question of the present days discussed in a few suggestive parables, by confronting conditions; consider them, if about to acknowledge Hymen, take what suits you best and may you live long and happy!—*Yankee Blade.*

SUPERSTITIOUS FEARS.

A Famous Singer's Strange Belief—Frightened by Nitric Acid.

"The thief doth fear each bush an officer," and a superstitious person is horrified at some fact which he can not understand. A certain famous singer who is still living, is said to believe that another singer, a rival for the favor of the public, possesses the "evil eye." When the two happened to be at a hotel in San Francisco at the same time, an earthquake started them both down stairs and into the street. The superstitious prima donna, as soon as she recovered the power of speech, insisted that the shaking of the earth was due to her rival's evil eye.

The South Africans will not destroy the Natal rock snake, a reptile sometimes twenty-five feet long, which feeds on small quadrupeds. After swallowing an animal it remains in a torpid state for some days, and might be easily killed by the natives. But they believe that the snake has an influence over their destinies and therefore they refuse to destroy it. They say that no one has ever been known to kill the reptile and prosper.

The Mama Sunel, a tribe inhabiting the mountains, fifty miles from the Persian Gulf, boast of having preserved their names and habits unaltered from the time of Alexander the Great. When the English Government sent its first mission to Persia, at the close of the eighteenth century, this tribe showed its adherence to one of its most ancient usages. The people plundered a part of the Embassy's baggage, which had been left in the rear, without a guard. Among the camels was one loaded with bottles of nitric acid, which had been brought from Bombay for medicinal use. The robbers, after plundering several camel-loads, came to that with the nitric acid, which they threw from the camel's back upon the ground. The bottles broke, and the vapor and odor of the acid so alarmed the ignorant and superstitious robbers, that they fled in dismay, believing that a pent-up demon had been let loose, and would punish them for robbing his friends. Several of the loads near the nitric acid were left untouched by the thieves, some of whom when caught confessed that the fumes of the acid had frightened them away.—*Youth's Companion.*

—A lot of young farmers in Central Illinois held a corn-husking contest a few days ago. They ruled out a chiropodist who wished to compete on the ground that he was a professional and an expert.—*Chicago Tribune.*

For Economical Reasons.

Old Wayback Wayback (from Wayback Township)—Gee whack! things is scrumptious, ain't they? What fur is that 'ar ax in th' furrard part o' th' kyar?

Young Wakeup Wayback (from the city)—That's to help kill the passengers in case of accident, so as to bring the damages down to $5,000.—Life.

Likely to Be Misunderstood.

Miss Minerva—Your visits to your old home are so few and far between now, professor. I do hope you can spend some time in town.

The Professor—Ah! thank you. I have tried so to dispose my time that in my visits among my friends I can embrace all my former pupils in the seminary, particularly you, Miss Minerva.—Buffalo Courier.

A Lover of Winter.

I luv tew see the fleecy snow
Cum sailin' thro' th' air,
A-coverin' up th' fences, an'
Th' hillsides bleak an' bare.

I luv tew see th' steel blue ice
A-formin on th' pond,
Knittin land an' water with
A close tho' brittle bond.

I luv tew skate upon th' pond,
W'ene'er th' day is fine,
With Sally Smith's leetle hand
Clasped close an' tight in mine.

An' wen we cut our flourishes,
An' gracefully gyrate,
I kind o' like tew hev the strap
Cum loose on Sally's skate.

It's just a jolly thing tew dew,
Tew git down on yer knee
An' fumble roun' a leetle shoe,
An' then look up an' see

A rounded, rosy, dimpled cheek,
An' roguish, laffin' eye,
An' take yer pay fer fixin' on
Th' skate—all on th' sly.

But wot I luv th' most uv all's
A jolly cutter ride—
Thet is, w'en Sally's with me, fur
Tew cuddle by my side.

Don't want th' day too fine and nice—
Would ruther hev it storm—
Thet is, w'en Sally's with me, fur
I luv to keep her warm.

—Yankee Blade.

The Mississippi Doctor's Error.

Two agents for a new kind of churn came to the house of Dr. L——, of Panola county, Miss., in the evening, and were invited to spend the night. While one was caring for the horses the doctor, conversing with the other, found the men were from a place where he had practiced medicine in his youth. Inquiring about different persons, he at length asked: "And the Misses Brown, where are they? They were without doubt the most ugly women I ever saw."

"Yes," said the agent.

"What became of them?"

"One is my wife."

There was silence.

The doctor presently left the room. Going to the stable he saw the other agent and made a confidant of him, winding up with: "Well, they were uncommonly ugly women. Did you ever see them?"

"Yes."

And he married the other.

Dr. L—— claims that this is the only break he ever made in entertaining strangers.—Detroit Free Press.

A Clear Conscience.

Editor Cheap Monthly—I tell you it makes a man feel good to do a noble action. I'll sleep well to-night.

Admiring Wife—Have you rescued some children from cruelty or saved a life, my dear?

"Well, no, not exactly; but today a young woman who has been furnishing us with beautiful poetry for three years without charge, came into the office and I gave her fifty cents."—Philadelphia Record.

Why Philadelphia Is Slow.

Chicago Man (in Philadelphia)—Well, I don't wonder Philadelphia is called a slow old town. It would be impossible to do business here.

Philadelphia Host—Eh? Impossible to do business? Why?

"Why, the streets are so narrow you can't dodge creditors."—Philadelphia Record.

Suffering.

"No man can ever tell, unless he has passed through a similar experience, what I suffered during my life in Arizona," said Mr. Timberclaim. "What!" exclaimed the listeners, "were you tortured by the Indians?" "Tortured by the Indians!" with supreme contempt. "Naw! I bought a farm on monthly payments."—Burdette in Brooklyn Eagle.

The Slang User's Fearful End.

Mother—Johnnie, I do wish you would quit using slang.

"Why?"

"It's as bad as profanity. What do you think will become of the profane and slangy man when he dies?"

"He'll be in the soup."—Nebraska State Journal.

A Natural Mistake.

"Mr. Browne," said the milkman, "you sent me the wrong check. This is drawn to the order of the board of water commissioners."

"Why, so it is," replied Mr. Browne, and then he added, "Natural mistake, though. Mr. Pump—very."—Harper's Bazar.

A Shrewd Salesman.

De Smith (who has been obliged to go out into the street)—Why is this sidewalk so blocked up with ladies?

Passer-by (pointing to the shoe store window)—Don't you see that sign: "Small feet fitted here?"—Burlington Free Press.

Modern Barbarism.

Boggs—I understand you have changed your barber?

Biggs—Yes, I couldn't stand the old one. Why, only last week they had him out on Fortieth street to shave a corpse, and he tried to start a conversation on the tariff.—Burlington Free Press.

Don't Want to Be Cured.

Prince Bismarck is troubled with insomnia, and yet he refuses to read London Punch.—Norristown Herald.

PULMONARY DOPPERS.

Half of St. Louis' Policemen Die of Lung Diseases in Ten Years.

Some remarkable results have been reached by Dr. George Homan, medical examiner of the police department, in his investigations, made under direction of the Board of Police Commissioners, into the physical condition of the members of the force. Below will be found extracts from Dr. Homan's report, just published, dated April 3 last, and a supplemental report dated November 3:

"The mortality record of the department for the last ten or more years, taken in connection with a study and analysis of results reached by the former examination, together with the ascertained tendency of police life toward producing impairment of breathing capacity, especially in those new in the service, satisfied me some time ago that pulmonary mischief constitutes a principal weakening cause operating among the members, and that especial note should be taken of any thing indicating beginning or actual deterioration in this direction. Accordingly, in the conduct of the examination great care was exercised to ascertain the condition of the lungs, and the same degree of care was observed in taking the measurement of the chest.

"It is a painful and notable fact that a heavy mortality rate from lung diseases has prevailed in the department for many years, with necessarily a proportionally heavy sickness rate from the same cause.

"From data furnished by Mr. Tate, it appears that during the last eighteen years there was a mortality from all causes (excepting casualties) of sixty-five, of which forty, or 61.53 per cent., were from various forms of pulmonary disease, thirty-four being returned as due to consumption alone.

"The average age of the decedents from this disease for the period stated was a little over 41 years (41.29), while their average years of service was somewhat above ten (10.94).

"If the men appointed members of this force have always been selected with reference to physical fitness and soundness (as is presumably the case) such a melancholy showing constitutes a serious indictment of routine department methods; for the fact stands out with emphatic clearness that in a chosen body of men, a large majority of whom are in the prime of life as regards age, the death rate from pulmonary tuberculosis amounts to more than one-half of the total mortality from disease.

"For if the foregoing statements are true, and correct deductions have been made, past experience justifies the expectation that about half of all who join the St. Louis police force and serve ten years will sicken and die of consumption soon after reaching forty years of age; and this probability, with the added contingency of being shot or otherwise injured, adds nothing to the cheerfulness of this form of employment."—St. Louis Globe-Democrat.

THE HUMAN APPETITE.

In Some Countries It Craves Serpents, and Caterpillars in Others.

In South America the inhabitants eat every thing, even serpents and lizards. Humboldt has there seen even children drag enormous centipedes out of their holes and crunch them up. Puppies are choice food on the Missouri and Mississippi, and at Emeraldi the tid-bit is a roasted monkey. The flesh of the larger animals is appreciated variously; in Arabia the horse, in India the elephant and in Egypt the camel. The Chinese taste is for cats, dogs, rats and serpents, while bears' paws and birds' nests are dainties. But the pariahs of Hindostan have still stronger stomachs, for they contend with the dogs, vultures and kites for putrid carrion. The nearest approach to this remarkable taste is afforded by the inhabitants of Cochin, China, who prefer rotten eggs to fresh ones. At Terracina a guest will be asked whether he prefers a land or a water eel. In the West Indies a large caterpillar found on the palm tree is esteemed a luxury, while the edible nests of Java swallows are so rich a dainty that the ingredients of a dish cost as much as fifteen pounds.

A curious taste prevails in many parts of the world for clay. According to Humboldt, it is eaten in all the countries of the torrid zone, but the practice is also observed in the North, as hundreds of cart-loads of earth containing infusoria are said to be annually consumed by the country people in the most remote parts of Sweden, and in Finland a kind of earth is occasionally mixed with bread. This latter custom is more civilized than that observed by the women on the Magdalena river, who, while shaping earthen vessels on the pottery-wheel, put large lumps of clay in their mouths. In the same place it is often necessary to confine the children to prevent their running out to eat earth immediately after a fall of rain. The Otomac tribe of earth-eating Indians knead the earth—a true potters' clay—into balls of five or six inches in diameter, which they roast by a weak fire until the outside is hard. They remoisten them when they are required as food, and according to a monk who lived twelve years among them, one of them would eat a pound and a quarter of this peculiar food in a day.—Gentleman's Magazine.

—The American Humane Association resolved, in recent convention, that docking and nicking horse tails is cruel beyond excuse, and a disgrace to civilization.

WOMEN WHO EAT TEA

Discovery of a New and Dangerous Vice Reported from Boston.

Two servants who were hauled up before a police justice here the other day charged with creating a rumpus, indignantly denied having been drunk. They said that they had been somewhat under the influence of tea, which was responsible for their eccentric behavior.

"But," remarked the judge, "I never knew that any one could become really intoxicated from drinking tea."

"No more they can, yer Honor," was the reply. "We ate it."

It is becoming quite a popular vice in Boston, and presumably elsewhere—this tea eating. And, curiously enough, its victims are mostly found among the "help," who, having the household tea-caddy always accessible, get accustomed to helping themselves from it, a pinch at a time, of the dry leaves. These they chew, thus extracting the alkaloid, which is a toxic agent of a most powerful description. Its first effect is no agreeable exhilaration. Ultimately it induces sleeplessness and an abnormal condition of mind, with strange wishes and delirium. It is an amusing fact, by the way, that when tea was first brought to England, about the year 1665, it was served experimentally for eating in a bowl, like spinach. For a long time after that it was regarded as a deadly drug, and people who sold it were considered disreputable.

It is positively wonderful how the demand for new and particularly destructive vices gives birth to an apparently exhaustless supply. One in particular that is said to be making great progress among women is the habit of ether drinking. This chemical product, so well known for its virtues as an anæsthetic, is an ethereal spirit of alcohol, containing that element of alcohol which has the effect of deadening pain. Most people have had opportunities of observing this effect in drunken men, who suffer severe hurts without feeling them, apparently.

Ether, taken internally, produces a feeling of exaltation, which is not followed by the disagreeable after-symptoms arising from overindulgence in the crude whisky or other spirits. Its results are slower, affecting the mind by slow degrees and depriving the victim of all moral sense. The confirmed ether-drinker will murder her own grandmother, without so much as a qualm of conscience, to get fifty cents wherewith to purchase a bottle of her favorite intoxicant.

In its effects upon the moral being, ether bears a strong likeness to opium, which might be called a poison for the soul. The use of this latter drug is said to be fearfully prevalent among the wives of New England farmers, who devote the pennies they earn by selling eggs—always the private perquisite of the country women in this region—to secret purchases of the deadly stuff from itinerant peddlers. One woman in a small rural community will spread the vice among all her female friends, who, wearied by the endless monotony of their lives, are eager for any excitement.

The experienced eye can detect the habitual eater of opium by an uncertainty of gait, a sallowness of skin, and other symptoms. It is likely that the sallow complexion and weakly appearance so universal among the Chinese one sees are due to this cause. Everywhere throughout that part of China which is familiar to travelers the fields of rice are checkered with wide areas of growing poppies, the seeds of which the natives steep to make an intoxicating liquor. This is the most primitive method of consuming opium. For commercial uses it is gathered by cutting open the poppy seed heads with a knife, leaving the gum to exude. Ropes, held taut, are then dragged across the tops of the plants by pairs of laborers, and the gum sticks to the hempen strands, from which it is subsequently taken and packed for sale. The people of the far-away mountain region in China, where opium is unknown—particularly in the rugged North—are big, strong and healthy.—Boston Letter.

Crystalized Gypsum and Mica.

Gypsum is, chemically considered, a hydrated sulphate of lime. It is a well-known and very common mineral, and in its crystalized form sometimes occurs in thin, nearly transparent plates, which resemble the finer qualities of mica. But it is a mere resemblance, the constitution of the two minerals being in no particular the same. Mica is essentially a silicate of alumina, though in some varieties other mineral substances are combined. It is crystalized in thin plates, which may often be subdivided until hundreds of thousands of them are required to make an inch in thickness. Even though very thin these sheets of mica are both elastic and tough. For its various uses, in the doors of stoves, lanterns, etc., mica needs no especial preparation. It is used for window glass in South American countries, also in Siberia, and has also been applied to this purpose on ships of war, as the concussion of heavy guns often causes the fracture of glass windows. Mica has further been used for spectacles, optical instruments, and bronzing powder. Mica is found in nearly all parts of the world, but certain localities only produce large plates of it. In Siberia, Norway and Sweden large plates are found, often more than a yard in width, and similar pieces are found in Peru, Mexico, also in some parts of New Hampshire and in Canada.—Chicago Inter-Ocean.

ATHLETICS FOR WOMEN.

The Only Way in Which They Can Overcome the Evils of In-Door Life.

Among the infant nations of the world woman was expected to share the labors of the field with her lord. The exotic conditions of a pernicious civilization, as wealth accumulated and luxury grew, imposed trammels on woman and relegated her to the enervating confinement of the house, in order that she might preserve a more delicate and pleasing form for the gratification of man returning after the day's toil. Woman was, however, originally intended to be a much more competent companion and helpmate than the selfishness of man will concede. So long as a community remained pastoral and nomadic, so surely did woman retain a physical development equal and perfect as that of her mate. Thus, we find that Atlanta was as fleet of foot as any of her male companions, and not until she allowed her cupidity to get the better of her judgment, while striving to secure the golden apples dropped by Hippomenes during the race, was she vanquished. That woman was once as skillful as man in the practice and art of venery was symbolized by the fact that men did not deem it unworthy to worship a virgin huntress, and called upon Diana to lend them her knowledge and support in the chase. That war even claimed their services is evidenced by Herodotus and other ancient historians; and although the prowess of the doughty Amazons, who, in order that they might not be impeded in the use of the bow, mutilated their right breasts, may be in a great measure mythical, still such testimony goes to prove conclusively that woman, while perhaps not endowed with the same brute strength as man, can be his peer in most games, pastimes, and recreations that call for dexterity and quickness of hand, foot, and eye. No one can gainsay the fact that the long-continued seclusion of our fair sisters from sports and exercises has undoubtedly much deteriorated the physical stamina of the female race, at least in civilized countries. They are not capable of undergoing the fatigue, exertion and exposure nature intended they should; they are victims of many ailments that have become hereditary to their sex simply from inaction. They are not (I am talking now of the upper and leisure classes of civilized society more especially) in as thoroughly a healthy physical condition to sustain the burdens of maternity, and its consequent strain upon the system, as they ought to be, as it was intended by nature they should be, and as they undoubtedly would be if healthy exercise was more universally prevalent among the sex. If any reader doubts this statement he has only to analyze the statistics of any European nation that bear upon this subject to be convinced. Happily, the baneful results of an in-door life of inaction have been realized before its effects have become ineradicable, and the growing superiority of the physical development of the Anglo-Saxon over her Latin sister is due chiefly to the revival of athletic out-door exercise among the women of this family. English girls may surely claim the lead in the good work of athletic regeneration. They are closely followed by their fair sisters and rivals on this side of the Atlantic, and both are head and shoulders ahead of the daughters of France, Germany and other continental nations.—Charles E. Clay, in Outing.

SERVICEABLE SHIRTS.

Advantages of the New Style Which Opens in Front and Behind.

It is really a fact that the novelty of the season in shirts is an article which opens in front and behind. Odd, isn't it? Yes, but it is not only odd, but nice—an innovation which promises to revolutionize this important branch of gentlemen's dress. "We have them," said a fashionable haberdasher, as I jokingly asked for "shirts open in front and behind," and he volunteered the information that they are "the thing," however the idea may strike one at first. "To begin with," said he, "the shirt which opens only behind, now worn almost exclusively by city people, while an improvement over the old style opening only in front, has to be drawn on over the head, mussing the hair at times, when it would be better left undisturbed, and scratching the face oftentimes with the stiff linen of the starched bosoms or the points of the spiral fastenings for diamonds or other studs in the new shirt. These annoyances are obviated, for the shirt opens clear down the front and back, and the front can be closed with the buttons or studs, and the garment gently wrapped around a fellow like a breast-plate or a chest-protector, and buttoned behind. But there is another advantage equally marked. Coming in two flat pieces, it can be more easily washed and less easily torn to shreds in the mangling machines and the wringers. Then comes the ironing. In the old styles the irons have to be pushed inside to reach the back of the bosoms, and in ironing the front the shirt has to be pulled over the ironing-board, which is especially designed to rip things. In the novel, two-piece, open-in-the-back style of shirt, as any one can see, the work is done with as little difficulty as ironing a napkin."—Chicago Journal.

—Great sacrifices are made for political victory, but a Missoula (Mont. Ter.) man seems to have gone altogether beyond the line of reason. He confessed to a murder in order to show the inefficiency of the sheriff, and thereby lessen the latter's chances of re-election.

FLORIDA SPONGE-FISHERS.

Where and How They Ply Their Uninviting Trade.

The sponge reef of Florida begins a few miles east of Apalachicola and hugs the coast to within fifty miles of Cedar Keys; then there is a break of one hundred miles, after which it reappears and runs south without interruption to Key West and the Bahama Islands. This reef, a rocky ridge, sometimes of genuine limestone, but generally of coral, begins some six or eight miles from shore and continues out indefinitely; in fact, wherever there is a rocky bottom sponges are said to be found, and the only reason that the fisheries do not extend completely around the Gulf coast is that in places, as off the coast of Texas or Cedar Keys, this rocky bottom begins in water too deep to permit of profitable sponging.

The average depth of water on the St. Mark's reef at six miles from land is sixteen feet. The sponges are in great abundance and of good quality, being much better than those from the coast of Mexico, but rather inferior to the Bahama variety. The supply is practically inexhaustible, as they grow almost as fast as gathered, a sponge requiring only two years to reach maturity.

The vessels used in the business are generally schooners of about eight tons burden. They carry two small boats or dinkies, and are manned by a crew of five. Provisions are generally laid in for six weeks at a time, the usual limit of a cruise. At the reef two men go to each of the dinkies and the work begins. One slowly sculls around by a stern oar, while his companion examines the bed of the sea through a bucket with a glass bottom. This simple contrivance is fastened to the side of the boat low enough down to rest partially in the water, and by placing his head inside the bucket one can see with distinctness objects at a depth of even thirty feet. When a desirable sponge is spied it is brought up by a hook fastened on the end of a long pole. Herein lies the science of the craft, the knowing how to hook a sponge without tearing it all to pieces. A great deal of knack is requisite and is to be acquired only after long practice; and good hookers are always in much demand. Thus these men work on, day after day, under the tropical sun that burns and browns the skin until one can not tell a white man from a negro. It is a desperately hard life, more severe than any other I have ever seen, and it requires men of no ordinary constitution to stand up to it. Naturally, then, the spongers, as a race, are an exceedingly muscular set. Four of the crew being thus employed the duty of the fifth is to remain on the schooner and keep up with the dinkies, so that in case of a squall or a broken oar, he will be on hand to render prompt assistance. He also does the cooking, mends ropes, lays out sponges and plays the part of general utility man.—*Forest and Stream.*

—A correspondent of the San Francisco Call who has been doing New Zealand describes the great Sutherland waterfall. The water, he says, dashes over the cliff in three grand leaps, and constitutes about one-half of the entire volume of the Arthur river. The first leap is over a dizzy cliff into a rocky basin 815 feet below. Jumping forth again, it makes another leap of 715 feet, and then goes tumbling and leaping in one wild dash of 328 feet into the pool at the foot of the precipice. The total height is exactly 1,904 feet, which is claimed to be one of the highest waterfalls yet discovered in the world. When the sun is shining rainbows of all sizes hang over the fall, and the effect is indescribably beautiful.

—It may be safely stated that not one drummer in ten likes his situation, says the Trade Review. After the novelty of the life wears off an intense loathing of the road grows upon him. There is something utterly repugnant to the average man in being obliged, willy nilly, to hurry from place to place. To a married man it is especially so, and therefore most drummers are young and single.

—An old sportsman who is unorthodox enough to like bass and pike fishing with live bait better than using a fly for trout, uses almost any thing alive and small enough for the greedy fish to swallow whole. Bait for pike, he says, must be put on the hook so that the fish can swallow it tail first without swallowing hook and all. The bass, on the contrary, must see the victim's head before he gulps it, so the hook must be at the head end of the bait, the tough part of the lower jaw of the minnow being the best place to fix the hook.

LITTLE'S
CHEMICAL FLUID
NON-POISONOUS
SHEEP DIP.

One gallon, mixed with 60 gallons of cold water will dip thoroughly 150 sheep, at a cost of 1 cent each. Easily applied; a nourisher of Wool; a certain cure for SCAB. Also,

Little's Patent Powder Dip,
(Poisonous.)

Mixes instantly with water. Prevents the fly from striking. In a 2 pound package there is sufficient to dip twenty sheep, and in a 7 pound package there is sufficient to dip one hundred sheep.

SATURDAY MARCH 30.....1889

The new Territorial bill fixes the names of the two Dakotas as North Dakota and South Dakota. The people of South Dakota are to vote upon the adoption of the Sioux Falls Constitution on May 14th, and the location of the Capital is to be settled by election. On the same date the residents of North Dakota, Washington and Montana may vote for the election of delegates to the Constitutional Convention and for a full list of State officers. On the first Tuesday in October the people may vote upon the Constitution proposed by the Convention, and if adopted, after the President's proclamation to that effect, the Governor's of each may order the election of members of the Legislature and Representatives in Congress. The Legislature may meet and elect two Senators each in time to take their seats at the beginning of the next regular session of the Fifty-first Congress in December next, at which time the Representatives shall also be permitted to take their seats. The same provisions apply also to the Senators and Representatives of South Dakota.

Postal Savings Bank System.

One of the features of the government of Great Britain is the postal savings bank system. It is very popular and is largely patronized by the public. Its usefulness is beyond all question. United States Consul Walling, at Liverpool, has been investigating this subject and has given some very interesting facts about its workings in a report to the secretary of state. The beginning of the government postal savings banks was in 1861 under a bill prepared and presented by Mr. Gladstone. It was entitled "an act affording additional facilities for depositing small savings at interest with the security of the government for the due repayment thereof." On the day of the opening of the first banks under this act 435 deposits were received. One year afterward the number had increased so greatly that there were 2,535 offices open for the accommodation of the public. In 1886 the depositors had increased in number to 3,731,421, and the amount of money on deposit was £50,874,338. This in American money would be $250,000,000. Deposits of one shilling or any number of shillings are received up to $150 or £30. The interest paid is 2½ per cent. a year on every full pound. Should the sum on deposit reach £200 the interest thereon will cease until the amount has been reduced. The government has made provision for the investment of larger sums in its securities. The banks will receive deposits from parents or other relatives on behalf of minor children. Married women can also make deposits which are beyond the control of the husbands.

Another feature of the British system is that the government guarantees the repayment of all moneys on deposit with interest, and also any life insurances or annuities granted under the act creating these banks. The results of the measure of Mr. Gladstone have been such as to recommend it to the good will of the people of Great Britain. That they do appreciate it is shown by their liberal patronage. The cost of maintaining it is very little, being about five-eighths of 1 per cent. The guarantee of the government makes the system absolutely safe. It is in every respect a well regulated financial institution. Great Britain is not the only nation which has these postal savings banks. They are a feature of the American and Australian British colonies. They have been engrafted upon the political system of France, Germany, Austria, Italy, Belgium, Holland and Japan.—Detroit Free Press.

The Causes of Poor Hair.

The first and great reason is that women do not keep their heads clean. Oftener they are too busy with housekeeping and children to give the hair the weekly shampooing and nightly brushing it needs. Still oftener they are too negligent or do not know that on strict cleanliness of the scalp depends their chances of having good hair at 35. Housework should be done with a muslin cap or towel folded to cover the hair to the roots. House dust, which is mainly dead animal matter thrown off by clothing and beds, is deadly to lungs and hair. Housemaid's consumption is generally due to breathing the dust and flue of ill-kept chambers, and the layer which collects at the roots of the hair kills it and causes the most of the falling out of which matrons complain before 40.

When women comprehend the baleful influence of dust on the health, hair and complexion, they will banish carpets, upholstering and unwashing draperies, at once and forever, as the great receptacles and absorbents of dust. When curtains and carpets or large mats are used the air constantly receives floating dust at each movement; not much, it is true, in carefully kept houses, but quite enough as it gathers on the scalp, week after week, to form with its natural oil and sweat a thin malignant crust in which the root of the hair slowly decays and drops. As the most of women wash their heads not oftener than once in six weeks, the effect is beat left indefinite. Scalp irritations are not unknown, causing months and years of trouble. But oftener the skin of the head, clogged and loaded with dead scales of matter, loses its functions and the hair drops out.—Shirley Dare.

On the first night of "La Tosca" some one professed to be shocked by the extreme realism of one of the scenes. "Oh," said M. Dumas, "I suppose you would play Œdipus with spectacles and an eye shade."

Efforts have been made by several managers to induce Henry Irving to extend his season in this country, but up to the present they have been without success. Mr. Irving's receipts in Philadelphia have been phenomenal.

An Original Young Miss.

A little miss of this city, 3 or 4 years old, was in one of our shoe stores the other day, and after she had been fitted she was asked by the salesman if she wanted them put on. She replied that she wanted them put on her feet, and those in the box.—Burlington Free Press.

HANDLING OF FREIGHT.

SOME POINTS WHICH ARE OF INTEREST TO THE PEOPLE.

How Merchandise Is Handled by the Railroads—Their Methods of Raising Rates and Settling Claims Described in Brief. Sending a "Tracer."

The manner of making up through rates, that is, rates between points necessitating transportation over two or more roads, is now comparatively simple. Prior to the passage of the interstate commerce act, certain agreed rates prevailed at all junction or common points (prevailed until some one road felt inclined to cut), and points local to one road were fixed at as high rates as were considered necessary by the road reaching them. Now, however, the majority of the roads have thrown their local territory open by taking common points as basing points, and making the rates to intermediate local territory the same as those in effect at the next farthest basing point. In other words, dividing the road into groups, each group taking certain fixed rates. The through rates are divided between the roads forming the line, on a mileage basis—that is, each road receives a percentage of the through rate as great as the distance traversed over its rails bears to the entire distance from point of shipment to destination.

The numerous cases of delays and loss of property in transit are in a large measure due to careless or improper marking of merchandise by the consignor. If all packages were properly and plainly marked these annoying occurrences would be reduced to a minimum. As it is, however, the systematic methods of handling freight in practice by all roads render it almost impossible for anything to be carried to a wrong destination, although some errors in routing occur which, in the case of perishable freight, are equivalent to actual loss.

When a shipment fails to arrive on time a "tracer" is sent after it. These "tracers" are in the shape of a request upon forwarding agent to follow up the shipment by means of his way bill, car number, train number, date and seals, all of which are kept in his station records. The "tracer" is sent along the line traversed by the shipment, and each agent in turn notes thereon date of arrival and departure, whether transferred into another car, and seal record, and forwards to next junction point. In this manner freight is always ultimately discovered, though sometimes it takes considerable time. In urgent cases this is done by telegraph.

The great bone of contention between shippers and railroads is the time consumed in adjusting claims. When a claim is paid the mass of correspondence that has accumulated is usually detached from the claimant's original papers, and he cannot, therefore, understand why it could not have been paid sooner. Claims are never purposely delayed, and if shippers but knew the amount of labor involved, even in the simplest cases, complaints on this score would be less frequent. The larger business houses are gifted with more patience in this respect than the country merchants. It is also true, as claimed by these smaller dealers, that the large shipper has his claim "put through" in much less time. There are several reasons for this; the constant shipper, in presenting a claim, accompanies it with all necessary documents, and gives a clear and concise statement of the case, whereas the country merchant writes a rambling sort of letter, threatening to give all his shipments to the A., B. and C. road, and to do various other terrible things in the event of non-payment of his claim, and studiously avoids giving particulars, thus, in some cases, forcing the railroad to make out a case against itself.

A mistake the country merchant frequently makes is to send his claim to the shippers, asking them to push it through for him. This course of procedure always causes delay. A claim presented by the owner of the property—if bill of lading or receipt, and paid freight bill, together with a letter of explanation, is submitted to the delivering road—will be handled with dispatch, be the claimant a large or small shipper.

As a general rule overcharge claims are the most quickly disposed of. If occasioned by an error of one road in a line such road usually stands the amount, and if the claim be based on a rate in force by a competing route all roads interested willingly reduce to that figure upon presentation of proof.

The loss and damage claims are more difficult to handle. In the investigation of these matters, particularly damage claims, each road attempts to disprove any liability, and endeavors to shift the responsibility upon another, and it is this discussion between the roads which causes the delays complained of most frequently. The method of investigating claims of this nature is simple enough. The shipment is traced through from point of shipment, and the road on whose line shipment checks damaged or short pays the damage. It often happens, however, that the loss or damage cannot be located. It is then that correspondence accumulates, and the claimant's hair turns gray while waiting for his voucher. In cases where it is utterly impossible to locate the damage or loss it is the custom for all roads participating in the haul to join in payment of the damages. Several roads have recently adopted the plan of paying just claims as soon as presented, looking to their connections to "chip in" afterward.—Chicago Journal.

Improvement in Our Schools.

The schools should be an aid to the improvement of man's estate. In no way has so much been accomplished in this direction as by new inventions, by mechanics or artisans. The improvement of our material surroundings places humanity on a higher plane, and enables those who care for it to obtain the education in classics, etc., which they may desire. The tendency in the public schools should be to educate youths so that man may be better able to deal with his material surroundings.

That can be done in connection with the mere book education now given. But it is not done. A small departure in that direction has been made in the normal training. This needs to be carried further. The expensive higher branches should be lopped off and more aid given to those who need it. The old methods must give way to modern ideas. Improvement in the school system is badly needed.—New York News.

When Sunstroke Is Prevalent.

We generally find that when sunstroke is prevalent the atmospheric conditions are of a certain and definite character. These are found not only in an elevated temperature, but a great degree of humidity or moisture of the air. As long as we have dry air the degree of heat that we can endure without much discomfort is very considerable compared to that when the air is full of moisture. The explanation of this is simply due to the fact that evaporation and loss of heat from the skin and lungs is markedly interfered with, the already moist air being unable to take up and relieve us of the usual amount of moisture. This, coupled with the increased heat, is placing us in a position where our internal production is very apt to be decidedly increased. The only way we have of compensating under these conditions is by lessening exertion, light or modified diet and light clothing, and supplied with the ever present influence from the heat center, under normal conditions, will usually protect us.

How Chinese History Is Written.

Chinese history is compiled by a permanent commission of accomplished literary men, who are always at work upon it. In 1737 an imperial edict stated that history ought not to be written for the emperor's use only, and remain shut up in golden caskets and marble chambers; it ought to be made accessible to all officials, that they may know the mind of the emperors and the laws of the land. From the Chinese standpoint, history is divided into two parts—one an exact narrative of events, the other a record of what the emperor has said and done. This division originates two sets of publications; one in which the officers speak, the other in which the emperor is the spokesman. In the first, the industry of the bureau of history is run in the collection of facts, but there is always a danger that the recorder may be under a strong court influence. Historical candor can scarcely find a place in reference to nations or persons who have been in conflict with the court. With this exception, the array of facts thus recorded is most valuable.

The edicts published in the second series express the mind of the emperor. He is always a man who has the advantage of good training, and if his style is tolerable and he happens to be fond of writing his edicts himself, they will all be transmitted to future times in full. The scribes, who stand writing when he speaks, translate his spoken words into official phrases, and his opinions and decisions will then pass into official history, written partly by himself and partly by the scribes of the cabinet. Besides these there are various series of historical works—the first having been prepared in the Eleventh century—to popularize the subject and place the chief facts of the Chinese annals within the reach of common readers, who have not the opportunity to study them in full. The last of these has just been published. It deals with the reign of Kienlung, from 1736 to to 1795, and is in sixty volumes. Every important public matter is recorded under the day on which it occurred. The emperor has, as usual, the lion's share of the talking, and there is room for him to say a good deal in 120 chapters.—North China Herald.

The Cat and the Dog.

The mastery of herself which a cat shows when, having been caught in a position from which there is no escape, she calmly sits down to face out the threats of a dog, is a marvelous thing. Everybody has seen a kitten on a street doorstep attacked by a dog ten times her size, as apparently self possessed as if she were in her mistress' lap. If she turns tail and runs down the street she is lost; the dog will have a sure advantage of her. Even as it is, if he could get up courage enough to seize her on the spot he would be able to make short work of her. It is a case of life and death; but the whole air and attitude of the cat is one of pure and confident bravado. "You dare not touch me, and you know it," is what her position tells the dog.

But she is intensely on her guard, in spite of her air of perfect content. Her legs, concealed under her fur, are ready for a spring; her claws are unsheathed; her eyes never move for an instant from the dog; as he bounds wildly from side to side, barking with comical fury, those glittering eyes of hers follow him with the keenest scrutiny. If he plucks up his courage to grab her, she is ready; she will sell her life dearly. She is watching her chance, and she does not miss it. The dog tries Fabian tactics, and withdraws a few feet, settling down upon his forepaws, growling ferociously as he does so. Just then the sound of a dog's bark in the next street attracts his eyes and ears for a moment; and when he looks back the kitten is gone! He looks down the street and starts wildly in that direction, and reaches a high board fence just as a cat's tail—a monstrous tail for such a little cat—is vanishing over the top of it. He is beaten; the cat showed not only more courage than he had, but a great deal more generalship.—Boston Transcript "Listener."

Poison of Expired Air.

Recently two distinguished French physicians, Brown-Sequard and D'Arsonval, have been experimenting, and have obtained results which are thought to prove that expired air contains another poison, additional to those of carbonic acid and ammonia, to which mainly the dangerous nature of expired air must be referred. The exact nature of this poison has not yet been ascertained, but the experiments cannot be due either to carbonic acid or to ammonia.

By passing expired air, whether of human beings or of animals, through water, a solution was obtained which, injected into the veins of animals, invariably gave rise to the same symptoms—a slower breath, a rapid lowering of the temperature, a considerable paralytic weakness, especially of the hinder limbs, and, after three or four days, a morbid activity of the heart.

Larger injections induced excessive contraction of the pupils, increased paralysis, and a diarrhœa, something like that of cholera. The eminent surgeons who conducted these experiments are disposed to regard pulmonary consumption as largely due to this poison. If future experiments should establish this view, it must greatly emphasize the supreme importance of thorough ventilation in our homes and churches and all places for public gatherings.—Youth's Companion.

The Capital of Brazil.

Rio is a succession of disappointments. The only really pretty place is the Botanical garden, which serves to illustrate what the whole city might be. All varieties of food are peddled about, the venders attracting attention by clapping pieces of wood together and uttering peculiar cries. There are plenty of street car lines, and the cars are always crowded. Everybody reads a morning paper going down town, and an evening paper returning. Humming birds are as numerous as flies, and at night the air is full of fireflies that look like a shower of stars. The women have a bilious look, and are invariably fat, while the men are invariably lean. Next to her complexion the ugliest thing about a Brazilian woman is her voice. She never goes shopping, the servants doing it for her, or going to the shops and getting samples, from which she makes her selections at home. She is famous for her embroidery, made by her own hands. She is generally intelligent, learns readily and has considerable wit. She never goes out alone to call on friends and receives no gentlemen except in the presence of husband or parents.—William E. Curtis.

A Busy Day.

Hotel Waiter—You are late for lunch, sir.

Eminent Physician—Yes, I had to finish my magazine article on "The Laws of Health" so as to get it into the next mail. What have you today?

"Hot rolls, clams, plum pudding, apple dumplings, mince pie and fruit cake."

"Bring 'em all."—Omaha World.

Difference in Taste

Coal Dealer—Good morning! Fine, bracing weather.

Ice Cream Man—Beastly weather.—Tid Bits.

The Unfailing Meter.

Oh, gas may escape and gas may burst
And vanish in noise and flame,
But the meter's hand, in its quiet way,
Goes traveling onward day by day
And gets there just the same.
—Omaha World.

Notice for Proposals

NOTICE IS HEREBY GIVEN THAT IN pursuance or an order of the Board of Supervisors of the County of Inyo, State of California, made on the 6th day of February, 1889, the undersigned, Clerk of said Board, will receive sealed plans and specifications for a proposed new bridge across Owens River, to be erected on or near the site of Big Pine bridge, up to 12 o'clock M., May 7th, 1889.

The same will be opened between the hours of 2 and 4 o'clock P. M. of said day.

Said plans and specifications must be endorsed: "Plans and specifications for bridge across Owens River on or near the site of Big Pine brikge."

The right is reserved to reject any and all plans and specifications. P. H. MACK,
Clerk of Board of Supervisors.

GEO. M. GILL,
District Attorney,
INYO CO., CAL.

J. R. ELDRED,

SATURDAY, MARCH 30 1889

BORN.

BURDICK—At Bishop, March 14, 1889, to Mr. and Mrs. Don Burdick, a son.

DIED.

CHILDS—In Tacoma, Washington, March 11, 1889, Mrs. H. L. Child, aged 28 years.

N. G. Fairman came in from Panamint during the week.

Hon. John A. Hanhah, Superior Judge, has gone to Los Angeles on a visit.

The attention of teamsters is directed to the notice published by Mr. Fitzgerald this week.

A. P. Smith and Marshall Naylor were in town Thursday night on their way home from Bakersfield.

R. C. Spear is having a lot of young locust trees set out on his timber culture entry near Lone Pine.

C. A. Harvey, of Lone Pine, started for Los Angeles on Wednesday morning. He will be gone about two weeks.

The State Legislature this year appropriated $12,534,000 of public money, as compared with $9,839,000 last session.

Messrs. O. I. Mairs, C. Mulholland, C. A. Levy and Frank Chess arrived at Independence on Thursday evening from Los Angeles.

Religious services will be held at Lone Pine next Sunday at 10:30 a. m.. Sunday school at 11:30. Preaching at Independence at 7 o'clock p. m. Sunday school at 11 o'clock a. m.

Mrs. S. D. Thurston started for Bakersfield last Monday to join her husband. Henry Harris, who has been here for some time past on a visit with his uncle, Mr. L. Wood, accompanied her.

Governor Waterman has received an offer of $3,000,000 for the Stonewall mine, located at Julian, and he declined the offer, saying that there was $5,000,000 in sight in the mines at the present time.

Doctor Bishop, of Reno, has been at his place on the Eastside Canal most of the week. He has got some hundreds of acres of land cleared and is setting out a large vineyard, mostly of raisin grapes.

Last Thursday between Cottonwood and Independence a black fur overcoat was lost from a wagon. The finder will be suitably rewarded by leaving it at any store at Lone Pine, or at the Norman House, Independence.

Harry Robinson, Wm. Jenkins, J. V. Skinner and other locators under the Stevens ditch are busy plowing. All the large tract of land irrigated by the canal will soon be under cultivation and will make a fine settlement.

Whitelaw Reid, of the New York *Tribune* has been appointed Minister to France; Col. Fred. Grant to Austria; John C. New, of Indiana, Consul General at London. Chauncey M. Depew has the refusal of the post of Minister to England.

Mrs. G. Sanger, of Big Pine, arrived at Independence last Thursday on her way home from a visit of some months duration at Bakersfield. She was accompanied by her daughter, Mrs. Borgwardt, of Bakersfield, who will make a visit of several weeks in Owens Valley.

Mr. Frederick Lucas, of Perry's Mills, N. Y., and his brother, Mr. John Lucas, of Lone Pine, made a pleasant visit to this office early in the week. The gentlemen had been to Big Pine to meet their uncle, J. S. Broder. Mr. F. Lucas has returned to his home in New York. Like all other visitors Mr. Lucas expresses the greatest surprise at the extent of the valley and unhesitatingly predicts a prosperous future for the county.

In a private letter from Frank Fitzgerald this week he says: "I am getting ready for a lively summer's work. In addition to the working of the Modock I am going to put a force on the St. John and St. Francis mines, owned by Gunn & Fitzgerald, and am going to first concentrate and then amalgamate 3,400 tons of tailings at the St. John millsite. Have had the mine leased to Decker and Van Kleet, who are now shipping two car-loads of high grade ore. There is only one team, of ten animals, on the road to Keeler and I have hauling for two such teams, with a month's hauling sacked."

Correspondence

BIG PINE, March 25, 1889.

ED. INDEPENDENT: *Dear Sir:*—I notice in the last week's *Register* that there is an attack upon his Honor, Judge John A. Hannah, accusing him of discriminating in favor of the INYO INDEPENDENT and against all other papers in the county, in the matter of giving to it the publication of probate notices and other public printing. I do not know how this is, neither do I care. I am a plain, matter-of-fact man and I only look at the results. In every county there is an official organ; in this county the paper recognized as being that organ is the INDEPENDENT from the fact that it has the contract for doing the public printing. Every person who has occasion to look for an official publication in legal matters always refers to the legal organ for that information. Again, take my case for an illustration: I once had occasion to advertise a notice which required a proof of publication. I had it inserted in the Inyo *Register*, and when the time came for the matter to be heard the proof of publication was not made, though I had written for it, and Judge Hannah had to adjourn Court, or continue the case, until I got the proof. Is it any wonder that he orders the advertising to be done in a paper where he can can have his proofs made? Let Mr. *Register* attend to his own business promptly and the chances are that in the near future he may acquire sufficient business capacity to entitle him to some consideration, though may be a little. DUPLEX.

Tourists

Whether on pleasure bent or business, should take on every trip a bottle of Syrup of Figs, as it acts most pleasantly and effectually on the kidneys, liver and bowels, preventing fevers, headaches, and other forms of sickness. For sale in 50c and $1.00 bottles by all leading druggists.

AN OPENING WEDGE

Proposed Mail Route to Inyo County—A Start For Closer Business Relations With Los Angeles

At the last meeting of the Chamber of Commerce entertaining remarks were made by Mr. Mulholland, a visitor from Independence, Inyo county, regarding the prominent characteristics of the county, and especially of Owens Valley. He gave a very fine picture of the fertility and productiveness of the section and its great mineral wealth, and urged that Los Angeles take up the matter and assist in bringing forward and developing a country naturally tributary to this city. Mr. Mulholland's visit has stirred up an interest, and efforts will surely be made to open that region by railways. A starter in that direction is the movement to get mail communication between Mojave, on the Southern Pacific railroad, 100 miles north of Los Angeles, and Keeler in Inyo, a distance of 121 miles from Mojave, by stage, through a country of no heavy grades, and easily traversed by wagons all the year around.

The settlers in the country named are our neighbors, and ask us to assist in opening communication by this route. To this end a petition is being circulated in Los Angeles, asking the Postmaster-General to establish a mail route through the country named, which is being largely signed. This is a matter which commends itself to every one. But few, perhaps realize the great distance a letter has to travel and the circuitous journey it has to take to reach Independence or Keeler, or any other place in Inyo county. From Los Angeles a letter must go to Sacramento; thence to Reno Nevada by the Central Pacific; thence to Carson by the Virginia and Truckee; thence by the Carson and Colorado road almost due south again to destination, in all more than 1,000 miles. The route proposed to be covered by the petition is as follows: Mojave to Coyote Holes, 50 miles; to Olancha, 55 miles; Lone Pine, 24 miles; Independence, 16 miles; Big Pine, 28 miles; Bishop, 16 miles; a total distance of 189 miles.

From Mojave to Olancha there is no mail service, and the settlers on the way can only obtain their mail by chance passers over the country; the same is true of the whole distance between Mojave and Owens Valley. There was formerly a mail service from Caliente, at the west slope of the Tehachipi mountains, to Havilah and Olancha, but it was discontinued when the mines began to fail.

Every consideration of commercial advantage urges the establishment of the route, and when once in operation—in addition to a freight line soon to be established between the points named—a railroad will not be long in heading that way.—*Daily Herald.*

NO SUBSIDY ASKED.

H. M. Yerington, Superintendent of the Carson & Colorado railroad, who has been in this city for several days interviewing members of the Chamber of Commerce and others about the extension of the road from its present terminus at Keeler to Mojave, a distance of 121 miles, has returned to Carson City. His visit here has had the effect of posting this gentleman upon the merits of Los Angeles, and, indeed, Southern California, and has opened the eyes of the Chamber of Commerce upon the advantages to be gained to the city by the building of this short link of railroad. It has been shown that it would place in immediate communication with this city at least 20,000 people, all of whom will draw their supplies from the most reliable market, and Los Angeles can compete with San Francisco in this matter and easily secure it all. Mr. Yerington sees the advantage this link would be to his road now as he did not see it before, and is very favorably impressed with the project. While the question of a subsidy for building the 121 miles will not be considered at all, it is the opinion of gentlemen who have taken much interest in the project, that if Southern California would take $500,000 worth of bonds in the road, six months from that day trains would be running to Mojave. Solid men of the city think very favorably of the enterprise, and it is quite probable that the bonds will be taken up in a short time. The benefits to this city are very much more than the cost of the road would be, for it opens out a large and rich section which is now controlled by San Francisco. —*Daily Tribune.*

Notes

The future of Owens Valley is dependent upon railroad connection with Los Angeles. Without a railroad to that city Inyo county will never be in any better financial condition than it is to-day.

The people of Los Angeles are firmly convinced that a railroad to Inyo county would be of great benefit to them, and they are willing to help build a road.

Every dollar's worth of business we send to Los Angeles will make the people more desirous of being connected with us by rail and will hasten the building of a road.

If there be a merchant in Inyo county who would refuse to send business to Los Angeles when he can buy goods as cheaply there as elsewhere, and other things being equal, that man is the enemy of the people of Inyo and should be treated as such.

NEW ADVERTISEMENTS.

To Teamsters.

OFFICE OF ST. JOHN MINING CO.
LOOKOUT, INYO CO., CAL.
March 24, 1889.

Proposals will be received till April 10th, 1889, for the hauling of 300 tons of ore from the St. John mine to the terminus of the Carson & Colorado railroad. The ore is now ready for delivery at the rate of 50 tons per month or more. Payment will be made in U. S. Gold Coin on delivery of ore at terminus of railroad. For further particulars address J. J. GUNN, Independence, or FRANK FITZGERALD.

Superintendent St. John Mining Company, Lookout, Inyo County, Cal.

Summons.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

Maggie J. Dunn, Plaintiff, vs. Robert A. Dunn Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to ROBERT A. DUNN, Defendant.

You are hereby required to appear in an action brought against you by the above-named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this summons—if served within this county; or, if served elsewhere, within thirty days. The said action is brought to obtain a decree dissolving the bonds of matrimony existing between you and the Plaintiff in the above entitled action and giving to said plaintiff the custody of the minor children, Wallace Dunn and Elsie Gertrude Dunn, also for counsel fee, alimony and general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint as above required, the said Plaintiff will apply to the Court for the relief in said complaint demanded.

WITNESS my hand and seal of the said Superior Court of the County of Inyo, State of California, this 6th day of February, A. D. 1889. (SEAL)

P. H. MACK, Clerk.

[ENDORSED.]

SUPERIOR COURT, COUNTY OF INYO.

AGENTS WANTED for the MISSOURI STEAM Washer

Active, honest persons all over the country, with or without team.

JOHN C. EVANS, SHORTSAND, MO., writes: "I stand up and affirm that a Washer saves more hard labor and money in a large family than any Reaper and Mower that ever was put on any farm with less than 100 acres in cultivation. If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and saves as much money as it does and cost no more, I can sell one at every house, if they had to take the feathers from under their wife and babies to pay for it."

JOHN R. DODGE, JR., jeweler, NOKASH, ILL., writes: "You ask what I think of the Washer I bought last summer. Let it be the best machine ever invented by man. It. We have just as good chances on Monday as on any other day. Ed. If you run short, you can not buy ours for $100."

I will ship a sample to that, desiring an agency on a week's trial at liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents big money. Write for particulars.

WHITTIER, St. Louis, Mo. CUT THIS OUT AND SEND WITH ORDER.

ALLEN GRAY;

— OR, —

The Mystery of Turley's Point.

Being a Few Romantic Chapters From the Life of a Country Editor.

BY JOHN R. MUSICK,

AUTHOR OF "WALTER BROWNFIELD," "HELEN LAKEMAN," "BANKER OF BEDFORD," AND OTHER STORIES.

[*Copyrighted, 1888, by the A. N. Kellogg Newspaper Company.*]

"I ask your pardon if I seem bold," said Allen, hoping to detain her but a moment longer, "I am very lonesome in the village; there is so little congenial to my nature, and I—I hope we may see each other occasionally."

Alternating flashes of crimson and pallor of death swept over her face, and in a voice almost choked with dread or confusion, she stammered:

"Perhaps—we shall!"

"Do you hope so?" he asked, his face full of earnest eagerness.

"I—I—I don't know—I fear I do," she stammered, a look of wild terror coming over her face, which sorely puzzled him.

She left without another word. He watched her as she tripped lightly down the path, and saw her occasionally press her snow-white handkerchief to her eyes. She reached the grim old garden-gate, which she unlocked, and turned her white face to him for a moment, waved an adieu with her small jeweled hand, and passed in from his sight.

Allen heaved a sigh as she disappeared. Dull, indeed, seemed the world when that bright, sunny creature had shut herself within those gloomy old walls. He went slowly homeward, hardly able to tear himself from that mysterious old castle-like house, which had become so wonderfully attractive to him.

"If she is one of the ghosts that haunt that building I would never be frightened from it," he said, as he walked down the hill to the village.

It was late, and the church bell was ringing for evening services when he reached home. He had been trained to regularity in his attendance at church, so he hastened away to the small house where the good people of Turley's Point met to worship. Like most churches the members were not all as good as they should have been, and even pretended to be.

There he saw Tom Simmons and George Strong, both belonging to the same denomination, who broke the bread of life and sipped the emblem of the blood of the atonement on the holy Sabbath, and next day began anew their hostilities and opposition to each other's plans.

Like one in the midst of a delightful dream and wholly oblivious to surroundings, Allen sat throughout the entire sermon. The preacher, lost in the fog of his own argument, was striving to wade through some mystical proposition, which he did not clearly understand himself, and Allen might be excused from attempting to follow him.

That night angels, with the sweetest songs mortal ears had ever heard, hovered over Allen Gray's bed. Masses of golden hair and eyes of heaven's own blue were about him. One dearly beloved vision was nearer than any of the others. Her angelic face had upon it an expression of mingled pain and dread. In his great fear of losing her he stretched forth his hand imploring her to remain. Reason, even in sleep, seemed to say that it was only a creation of his imagination—the result of a dreaming fancy—quickened by his recent interview with the pretty girl from the mysterious house. It was the sad face of Bertha, but oh, how lovely! All night long she seemed ever with him, and when he awoke her image was still in his mind.

At his office, wherever he went, he saw that sad, pale, sweet face.

"I'm armin' for the fight," said George Strong, on entering the office that evening.

"How—what do you mean, Mr. Strong?" asked Allen.

"I've got my fightin' rig on; I'm in the field in yearnest, an' I'm agwine to make the race, hit or miss; I'm bound to be sheriff."

"Will you have any opposition?"

"Course I will," he answered, while his face grew dark. "I'll have opposition as long as he an' I both live."

"To whom do you refer?"

"Tom Simmons. He's my evil genius. Whatever I undertake he tries to head me off. Ef I'm about makin' a trade an' he finds it out he spiles it. I've made many a dicker he knew nothin' about, and I guess I've spoiled about as many trades for him as he has for me."

"I don't think he will be your opponent, Mr. Strong."

"Oh, yes he will," was the firm reply. "He's allers been in my way, and allers will. I want you to stand by me."

"For sheriff?"

"Yes."

"You do not intend running for any other office?"

"No."

"You won't ask me to support you for any thing except sheriff?"

"No, sir, I won't."

"Well, Mr. Strong, I think when the time comes I will give you my support. I have determined that the *Western Republic* shall be an independent periodical, and I shall favor a home man for sheriff."

"That's all right, gin us your hand on't," said Mr. Strong, shaking Allen's hand warmly.

With hopes greatly revived he left the office.

"I believe if he had known that Tom Simmons intended being a candidate for the Legislature he would have foregone his desires for sheriff in order to beat his enemy."

That same day Tom Simmons entered the editor's sanctum to announce that he, too, had deckled to arm himself for the conflict.

"It's no use to wait longer. I'm goin' to know the very worst right now," said the

"THAT'S ALL RIGHT; GIMME YOUR HAND ON IT!"

excited politician. "Are ye goin' to support me fur the Legislature."

"Do you intend running for any other office?" Allen asked, shrewdly.

"No, o' course not; I can't run for two offices at once."

"You only ask the support of the *Western Republic* for you as a candidate for the Legislature."

"That's all this time. When I run for Congress o' course you'll stand by me?"

"That will be a long way in the future; for the present let us consider only your race for the office of Representative."

"Well, that's all the office I've got any notion o' runnin' for; an' what I want to know is whether I kin depend on the *Western Republic* standin' by me?"

"When the proper time comes you can."

"D'ye mean it?"

"Yes."

"Shake!" cried the enthusiastic politician, seizing the editor's hand. "Now ye won't go back on me?"

"Certainly not; you are my man for the Legislature."

"Ye won't support Strong?"

"I shall support no one but yourself for Representative, Mr. Simmons. The *Western Republic* will be for Thomas Simmons first, last and all the time, and at the proper time will so announce."

Mr. Simmons' delight almost burst all bounds. He laughed, slapped himself on his knees and overflowed with self-congratulation on his own shrewdness in getting ahead of Strong, whom he supposed was aspiring to the same position he was to attain.

"I was goin' to withdraw all my support from the paper if ye went agin me," said Simmons, as soon as he had somewhat recovered from his wild ecstasy of joy, "but now I'll stand by ye. I've got some money left and when ye want any draw on me."

Allen suggested that the influence of the *Western Republic* might be broadened by extending its circulation. If Mr. Simmons knew of persons in the county who were not subscribers it might be an excellent plan for him to subscribe for them and send the paper to them. Simmons thought so, too, and paid for twenty-five new subscribers.

Allen was acting in good faith, and had determined to support both Simmons and Strong for the offices to which they aspired, but while they were arming for the conflict he, as the knight who was to champion the cause of each, thought it well to arm, too.

CHAPTER VI.

"GO AWAY, IF YOU VALUE YOUR LIFE."

It was only the next day that as Allen sat busy at his desk some one entered, and on looking up he saw Mr. Strong again at his side.

"Don't you think I'd better announce now?" he asked, leaning over on the editor's desk.

"No, I think you had better not."

"But he may go ahead."

"It would ruin an officer to begin the battle before war was declared."

"Reckin yer right," said Strong, changing elbows at the desk and fixing his greenish-brown eyes upon the new editor as if he intended piercing him through with his look. "Now yer sartin ye'll give me the support o' the paper?"

"Of course. The *Western Republic* will give you its support for the office of sheriff, now you can depend on that."

"That's all I ax o' it. Now I'll whoop yo up, ye bet. I was goin' to withdraw from yer consarn every dollar I had in it, ef ye'd supported Tom Simmons, but, as it's fur me, I'm fur it."

"It is for you."

"Then I'll do all I kin for the paper," said Mr. Strong, enthusiastically. "Whenever ye want help call on me."

"You might greatly aid your own cause by increasing the influence of the *Western Republic*."

"Just tell me how!"

"If every man read this paper, they would all be friends to it, and readily obey its instructions. Your announcement and our advice to the public would reach every body at the same time, and you would get ahead of your rival."

"That's so; what kin I do?"

"You might pay for a few subscriptions and send them out to men whom you think would be or could be made to become enthusiastic supporters of yours. If you would only send to twenty-five or thirty it would be a great advantage to yourself and the paper."

Mr. Strong was a man who loved money, yet his personal ambition overcame his avarice, and he increased the circulation of the *Western Republic* to the number of twenty-five. As he went out Allen smiled and said:

"If there were only enough ambitious politicians' the newspaper business at Turley's Point would be a success."

A merchant came in at this moment to blow up the editor for having put his advertisement in an obscure corner where it would never be seen. He had just got the merchant pacified when a farmer named Brown entered to know why the items sent in from Hog Creek by his daughter were not printed.

"They were crowded out, Mr. Brown," said the tired editor.

"Crowded out, war they? So I'spose yer too hifer'lutin fer think o' Hog Creek! Ye mean to crowd us out, d'ye? I be hanged ef we don't every one o' us go agin ye, ef ye go to treatin' us that way."

"I beg your pardon, Mr. Brown, it was unavoidable. Tell your daughter to send some items for next issue earlier, so I can get them in, and I will send you the paper free in return."

This to a considerable extent smoothed the ruffled temper of the countryman, and flattering himself that he had brought the editor to time, by holding above his head the wrath of Hog Creek, he left the office.

Allen had only turned to his desk to resume his work when the office door was thrown open, and Joe Lenn burst in with a paper in his hand and fury in his eyes.

"Stop my paper!" he cried, in a voice of thunder. "Cut off my subscription, I say, cut it off!"

"What is the matter?" Allen asked, wondering if he had suddenly gone crazy.

"Cut me off, I tell ye; I won't have nothin' to do with ye—cut me off—cut me off!"

"I beg your pardon, sir, I shall cut you off with great pleasure, but I should like very much to know why you have become so indignant at the *Western Republic*."

"Look at this piece," roared the infuriated merchant, unfolding and spreading the paper on the desk of the editor, and pointing with a finger that trembled with suppressed rage to a humorous sketch about a bald-headed merchant who had bowed legs. "D'ye see that piece? Now every body in town knows you meant me."

Mr. Lenn was deficient in hair on the top of his head, while his legs were on the rainbow model, and by some strange coincidence the description in the sketch was something like him.

Allen glanced at the sketch and began to laugh. Mr. Lenn became enraged, swore, threw down the paper and turned to go.

"Hold on, Mr. Lenn; allow me to show you something about that article which has escaped your observation."

"What?" he demanded, savagely, as if he would have liked to annihilate the editor.

"Don't you see at the bottom of the sketch the words Detroit *Free Press*."

"Yes."

"Well, this article was clipped from that paper, and the writer of it never heard of you, and when I cut it out to use in our paper, I did not dream that it would wound your feelings."

Mr. Lenn scratched his bald head, and cursed himself for not having seen it before; finally, after exacting a promise from the editor to say nothing about it, he left the office. His name remained on the subscription books, and in a few weeks he became Allen's steadfast friend.

That evening Allen again found himself strolling toward the great old house on the hill. Oh, how dear had that spot become to him. Scarce a moment passed that the sweet vision he had seen on the bluff, bathed in the golden hues of the setting sun, was not present in his mind. Like a guardian angel she seemed hovering over him, sleeping or waking. Even as he bent over his desk, annoyed by merchants, harassed by politicians and perplexed with poets, she seemed ever near, looking over his shoulder and smiling that sweet angelic smile, which he had never seen on any other face.

He had made many inquiries about the mysterious family on the great hill, but his interrogatories were met with looks or exclamations of horror. No one in the village cared to discuss the subject. One day the large, dark-whiskered man who was represented as ruling supreme at the stone house came through the village, and Allen noted the expressions of terror on the face of every one as the mysterious stranger passed. Had he been a pestilence he would not have been more avoided.

"I will not be in time to witness the sunset from the bluff," Allen thought, as he toiled up the hill, "but if I can only get a glimpse of her I shall feel amply repaid for what I may undergo in climbing this hill."

The tardy moon still lingered below the eastern horizon, as if it had discovered pleasant fields and scenery, which it was loth to leave. The twilight shades were darker in consequence of Luna's absence than they would be in the middle of the night. All about the tired editor rose the great forest.

Allen vividly recalled his recent journey up the long disused turnpike, and wondered if Bertha still wandered the rugged paths about the spring. His flagging footsteps were quickened with hopes of renewing the pleasure he had experienced on his first visit.

"Oh, Bertha, will I see you this evening again?" he involuntarily asked himself as he reached the top of the great hill and the stone house burst into view.

Vast and somber in the solemn gloom of twilight stood that mammoth pile, towering up like some grand old castle. Allen, to his surprise, found himself seized by some strange superstitious dread, and his heart beating wildly. He paused but a moment at the front of the house, and, as he had done before, passed around to the rear of the building.

Darkness had made a wonderful change in the stone house. It seemed more grim, terrible and awe-inspiring, and he could half believe that it was really haunted. Was it because there was no room to drive those deceitful shadows away? Or did the evil spirits conceal themselves within the dark walls during the daylight, that they might revel in the darkness? He reached the rear wall, and, standing at the gate, gazed through a crack, hoping to see that beautiful being who had charmed him on a former occasion.

Suddenly there rose upon the air a piercing shriek, which seemed to chill the blood in his veins. Despite his courage, Allen could not refrain from quaking with a strange, supernatural dread. Before that awful shriek had died upon the air, the entire house seemed lit up with a blaze. It seemed as if every window had become a fountain of blazing light that illuminated the woods for a vast distance around.

Did he see forms darting hither and thith-

"WHAT IS IT, BERTHA?"

er with lightning rapidity, or was it only his imagination? But those shrieks and that demoniacal laughter were no myth.

Suddenly a rear door opened, and a light form clad in snowy white came flying down the garden path. She halted under a large pear tree within a few feet of the gate where Allen stood. He heard her sobbing violently as if some great grief had fallen upon her heart, and recognized her as his beautiful acquaintance on the bluff.

She was in distress, and what signified that wall or the danger that might be within to the infatuated Allen? He scaled it in a moment, and dropping to the ground at her side, said:

"What is it, Bertha—what has happened?"

Bertha, completely overwhelmed with astonishment, started back and gazed at him for a moment in blank amazement, then seizing his arm, she whispered:

"Go away if you value your life. Oh, Heaven! why did you come here? Go—go—go at once. Don't delay a second, for it may be too late even now."

(TO BE CONTINUED.)

Kingston, Canada, grocers have followed the lumbermen in protesting against any increase in the duty on pork—1 cent per pound on mess and 2 cents on other kinds.

Mr. Melody's Lucky Draw.

It was reported that Mr. J. B. Melody, of 333 State street Chicago, had drawn a handsome prize in The Louisiana State Lottery Drawing of December 18th. A representative of this paper was sent to interview Mr. Melody, who confirmed the report saying: Yes, I held one-fortieth of ticket No. 68,744 which drew the second capital prize of $200,000 in the company's drawing of December 18th last. I experienced no trouble in getting my money, all that was required being to present my ticket at the office of the Adams Express company and be properly identified. Four days after the date of the drawing I had the $5,000 in my pocket. A peculiar circumstance connected with the purchase of the ticket," continued Mr. Melody, "is that Miss Florence Bascomb, an acquaintance of mine, was present at the time, she naming the last three figures of the number, the condition being that whatever number I selected should end with 744. It was agreed that the prize, if any, would be divided equally between Miss Bascomb any myself. After receiving the money I hastened to call upon her and deliver to her her share of the prize." In an interview Miss Bascomb verified Mr. Melody's statement, adding that the money was an exquisite Christmas gift, and that she, who has for several years been the only support of an aged mother, could well appreciate such an addition to her income. It is the intention of both to invest their cash in Chicago real estate, which they hope will increase in value until their small fortunes become larger ones.—*Chicago* (Ills.) *Arkansas Traveler*, Jan. 12.

THE PACIFIC BANK

Has issued its quarter Centennial statement, which is indeed an interesting circular, and proves in figures that the past year has been the most prosperous one the BANK has ever had. It is a matter upon which all Californians may be congratulated, that the Bank still has the same able and conscientious President, Dr. R. H. McDonald.

In any case where the system requires building up, *Dujardin's Life Essence* never fails. It will succeed where everything else has failed in bringing up organic function. Price, $1.50 a bottle. All druggists.

By George! Washington!

By George! our victories were won,
By George! our liberties secured;
By George! immortal Washington
By George! who suffered and endured

In war's alarms, through battle's ills,
At Trenton and at Valley Forge;
In peace, on Vernon's sunny hills,
The honors all were won. By George.

By George! we stand; By George! we swear;
One day the nation gives to thee,
The soldier brave, the statesman rare,
For monumental memory

By George! whose glory is our fame!
By George!, whose deeds we call our own;
By George! whose honor and whose name,
By George! is ours, and ours alone.

—Jo King in Puck

There was a very curious contrast between the first and the second inauguration of George Washington, the first was conducted with all the pomp and ceremonial the young republic could muster, the second as quietly as possible.

—Miss Mary Maccribbin, who died at Washington the other day, nearly one hundred years old, used to say that she had seen every President from George Washington to Grover Cleveland. She was living in Baltimore in 1812 and saw the bombardment of Fort McHenry. She knew well John Howard Payne, the author of "Home, Sweet Home," and witnessed his appearance on the stage at Baltimore. She went to Washington first in 1821, and it took twelve hours by stage.

Our readers, when visiting San Francisco, should bear in mind that they can get the finest meal at the Louvre restaurant and the best wines, liquors and imported beers at the Louvre bar, for less money than at any other place in the city. The Louvre is first-class in every respect, and everybody goes there who appreciates a good thing. Location corner of Market and Eddy streets, opposite Baldwin Hotel.

It is not alone this year's almanacs that have a value. A New York man recently paid $25 for an almanac 275 years old.

THE CHILL BLAST

That sets the naked branches a-quivering, is not felt by the wealthy valetudinarian indoors, but not all the covering that can be piled on his warm bed, nor all the furnace heat that anthracite can furnish, will warm his marrow when chills and fever runs its icy fingers along his spinal column. Hostetter's Stomach Bitters is the thing to infuse new warmth into his chilled and aguish frame, to remedy the fierce fever and exhausting sweats which alternate with the chill. Dumb ague, ague cake, bilious remittent—in short, every known form of malarial diseases is subjugated by this potent, and at the same time, wholesome and genial medicine. Biliousness, constipation, dyspepsia, sick headaches, loss of appetite and sleep, kidney trouble, rheumatism and debility are also remedied by it. Use it with persistence to effect a thorough cure.

The answer to a suppressed conundrum is that Germany is like Oliver Twist because it wants Samoa.

CHILDREN STARVING TO DEATH

On account of their inability to digest food, will find a most marvellous food and remedy in Scott's Emulsion of Pure Cod Liver Oil with Hypophosphites. Very palatable and easily digested. Dr. S. W. COHEN, of Waco, Texas, says: "I have used your Emulsion in Infantile wasting with good results. It not only restores wasted tissues, but gives strength and increases the appetite. I am glad to use such a reliable article."

For relieving Throat Troubles and Coughs, "*Brown's Bronchial Troches*" have a world-wide reputation. *Sold only in boxes.* Price 25 cts.

See Antisell Piano advertisement.

Try Germea for Breakfast.

FOR THE BLOOD!

Swift's Specific cured my of Cancer, which was hereditary, for my father died of Cancer. My case resisted all other treatment, in fact grew worse all the time. I left off all other remedies, and took S. S. S. which forced out the poison until my system was cleansed, when the Cancer healed, not even leaving a sign. My health since has been excellent.

PISO'S CURE FOR CONSUMPTION

ERUPTION OF THE SKIN CURED.

Ed. Venney, Brockville, Ontario, Canada, says:

"I have used BRANDRETH'S PILLS for the past fifteen years, and think them the best cathartic and anti-billous remedy known. For some five years I suffered with an eruption of the skin that gave me great pain and annoyance. I tried different blood remedies, but, although gaining strength the itching was unrelieved. I finally concluded to take a thorough course of BRANDRETH'S PILLS. I took six each night for four night's then five, four, three, two, lessening each time by one, and then for one month took one every night, with the happy result that now my skin is perfectly clear and has been so ever since."

Before you elope, young woman, let your mother know your route

CONSUMPTION CURED.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 *Power's Block, Rochester, N. Y.*

FULL WEIGHT PURE
DR. PRICE'S CREAM BAKING POWDER
MOST PERFECT MADE

Its superior excellence proven in millions of homes for more than a quarter of a century. It is used by the United States Government. Indorsed by the heads of the Great Universities as the Strongest, Purest and Most Healthful. Dr. Price's the only Baking Powder that does not contain Ammonia, Lime or Alum. Sold only in Cans.
PRICE BAKING POWDER CO.,
NEW YORK, CHICAGO, ST. LOUIS.

MONEY FOR WOMEN
We offer an easy way to make hundreds of dollars between now and July 1st, 1889. We pay Good Wages, $500 as a free present besides offering $500 to the person who shall do the best work for us; $400 to the second, and so on down. Earliest Cauliflower in existence.

LONGFELLOW'S MAIDEN,

who is—

"Standing, with reluctant feet,
Where the brook and river meet,
Womanhood and childhood fleet!"

is a type of thousands of young girls who are emerging from the chrysalis stage of their existence, as they enter upon their "teens." Nervous, excitable, irritable, stirred by strange, unknowable forces within them, each a mystery unto herself, our girls need the tenderest care, the most loving, patient oversight, and the aid of Dr. Pierce's Favorite Prescription, to safely carry them through this critical period, during which, in too many lives, alas, are sown the seeds of distressing forms of diseases peculiar to the female sex. But this boon to womankind will prevent all such diseases, or cure them if they have already seized a victim. Woman owes it to herself, to her family, and to her social station, to be well and strong. Let her then not neglect the sure means of cure. "Favorite Prescription" is a legitimate medicine, carefully compounded by an experienced and skillful physician, and adapted to woman's delicate organization. It is purely vegetable in its composition and perfectly harmless in its effects in any condition of the system. Sold by druggists; $1.00, or six bottles for $5.00.

Copyrighted, 1888, by WORLD'S DISPENSARY MEDICAL ASSOCIATION, Proprietors.

DR. PIERCE'S PELLETS: PURELY VEGETABLE and PERFECTLY HARMLESS.

MODERN EXPLOSIVES.

An Outline of Their Effect on Progress and Civilization.

Though gunpowder has exerted so wide an influence, its adoption marks a distinct advance in the progress of man, for, with the obvious exception of heat, it was the first instance in which man bent a subtle and invisible force to do his work, and he thereby greatly enhanced his own power. How great this gain is may best be realized when we learn that a pound of gunpowder is theoretically capable of doing 486 foot tons of work or exerting 32.6 horse-power, and that as a modern high-power gun requires for each charge 850 pounds of powder, the theoretical efficiency of its charge is 27,710 horse-power. Only a civilized people could construct and properly employ so enormous and yet nice a weapon; and it is not surprising that the races who possess it should maintain their supremacy. With the present century there came a fresh development in explosives, and this time the discoveries resulted during the study of the science of chemistry, one of the sciences which had grown up under the freedom which gunpowder had brought. In 1800 Howard discovered mercury fulminate, in 1845 Schonbein discovered gun-cotton, in 1846 Sobero discovered nitro-glycerine, in 1866 Nobel discovered dynamite, and since then, especially during the last decade, there have been discovered or devised a great number of explosive compounds or mixtures. Each of those mentioned is vastly more powerful than gun-powder, but thus far they have played little or no part in war. However, the knowledge which has been gained of their properties had the progress which has been made in applying them, especially as charges for shell, lead to the belief that they will be used with great effect in future wars and will cause a revolution in the prevailing systems of fortifications and methods of warfare. But it is not in war only that gunpowder has played an important part, for it has been of immense assistance to man in the arts and industries. No one can gaze without surprise on those stupendous works, the temples and tombs, the aqueducts and viaducts, which exist in the East; and this surprise becomes amazement when we learn that the enormous blocks which form these structures were quarried with lever and wedge. Such simple tools, together with the slow and laborious system of "fire-setting," constituted the only means employed in excavating, and in such mining operations as were carried on until 1613, when Martin Weigil, the mine superintendent at Freiberg, brought gunpowder into use for this purpose. As it has been found, from a large number of observations on various materials, that one pound of powder will displace 32,832 pounds of material, we see what an improvement was wrought in the arts of mining and quarrying; and when we consider what hardships the miner must have endured under the barbarous system of "fire-setting," the civilizing influence of the introduction of this storehouse of energy becomes apparent. But the improvement must have been as noticeable in another direction, for, the much greater ease with which both the precious and the useful metals could be won with this agent, must have so cheapened their cost and increased the available supply as to have greatly hastened and extended their uses. As in mining so in engineering operations, gun-powder has been of immense assistance, and it is especially in these two fields that the modern high explosives have been employed. If, as is generally believed, our modern civilization is largely dependent for its existence on ready means of communication and easy commercial intercourse with all its parts, then explosives and especially the high explosives have contributed largely to secure these results; for without them the mountains that barred our passage on land would never have been tunneled and the obstructions which endangered our passage on the water could never have been removed. How large a force has been drawn on for this work is shown in the single example of Hell Gate, where in the first shot the charge possessed a theoretical efficiency of 2,823,750 horse power, and in the second, 16,321,275 horse power. Certainly there must have been an immense advance in civilization when man by a touch of the finger can put into operations forces as mighty as these.—Chautauquan.

Jefferson Davis' Home.

Beauvoir, with its cool verandas, its wide lawns and its virgin groves, its wharf, its boats and its bath-house, is a typical Gulf coast home, and in the occasional absence of the curious and sight-seeing it looks the very abode of peace and rest, by the placid sound that never whispers of rocks and breakers where a nation stranded. The stranger here enjoys the true hospitality which to the born Southron is scarcely distinctive, although many of its recipients are but so many mysteries to those who can not conceive of Mr. and Mrs. Jefferson Davis as show people, but prize them for his simple greatness and her simple goodness; while the "Child of the Confederacy" is in the truest sense the peculiar possession of Southern Mississippi. Beauvoir is but one of many in a long line of handsome villas that, with a few happy exceptions, blend walls that are variously white with blinds that are variously green, whereas a more somber or neutral combination would not only be an offset to the general glare, but a resistant to the forces that so swiftly and surely convert new white and green into dinginess and weather stain.—Louisville Courier-Journal.

THE LIME KILN CLUB.

The Subject of Honesty Discussed by Waydown Bebee and Elder Toots.

After the reading of the minutes of the last meeting and other routine business, Brother Gardner stated that he had been asked to secure an expression of opinion on the question: "Does It Pay to be Strictly Honest?" He would call upon Sir Isaac Walpole, as the oldest member, first.

"I war in hopes dat queshun would nebber cum up in dis club," said the old veteran in reply. "It ar' a queshun which has caused me many sleepless nights, an' which I hev nebber bin able to settle to my own satisfackshun. On one occashun I found a wallet in de road. It contained $30, an' when I restored it to de owner he handed me all de money an' thanked me besides. On several other occashuns I hev found wallets and spent $2 worth of time huntin' up de owner an' bin rewarded wid 10 cents. A grocer once gin me a $10 dollar bill fur a $1. I handed it back an' he giv' me half a pound of tea. De very next week I giv' him a $5 bill fur a $2, an' he kept it an' swore dat I was a liar.

"If I buy meat de butcher works mo' or less bone in on me," continued the old man. "If I buy wood or coal it ar' allus a leetle short. I expect de dry goods man to cheat me mo' or less, an' de hatter an' shoemaker doan' allus stick to facks. If I war' strictly honest I reckon I should land in de poo'house in about a year. I doan' advise any one to be dishonest, but it ar' my opinyun dat if you find a pug dog runnin' around de streets he should be taken home and tied up to de bed post until some one advertises a liberal reward an' no queshuns axed."

Waydown Bebee then spoke as follows:

"Dar' was a time when I was so strictly honest dat ober fifty of de nayburs' chickens used to roost in my back yard o' nights. At de same time dem nayburs borrowed money of me an' dun forget to pay it back, an' if I left a spade out doahs ober night it was gone in de mawnin'. If I owed a debt I ached to go an' wake de man up at midnight an' pay him. If I found half a dozen lead nickels in my change, I melted 'em up fur bullets to shoot cats. If I diskivered ten cents on de floah in de postoffice I handed it to de postmaster. I practiced dis course fur five long years, an' doorin' dat time I not only run behind $1,000, but I heard myself spoken of on all sides as a greenhorn, a pancake an' an idiot. I finally decided to change. In five years I has picked up ober $2,000, am out of debt an' grocers an' butchers send to my house and solicit my trade. When you ax me if it pays to be strictly honest I mus' reply dat it don't—not by a jug full!"

Elder Toots was then called upon, and he said:

"If dar' am any one pusson in Detroit who has had chicken fur dinner any oftener dan I hev I should like to see his photograph, an' yit whar' am de pusson who dare stan' up an' say I steal chickens! I used to be strictly honest. If I found a cent in de road I went whoopin' up an' down to find an owner. If a $25 lost dog crept under my house to be taken koer of until advertised I drove him out an' let do man next doah get de money. I not only paid the house rent on the day it was due, but made all repairs out o' my own pocket. I run right down hill, an' by an' by I woke up to find de old woman out o' 'taters flour, meat, sugar, tea and eberything else 'cept Rough on Rats an' two bars o' soap, while my toes war' out to January weather. On dat same mornin', as I was gwine down town, I heard one man say to another: 'Say, Jim, see dat pusson? He ar' de fool nigger of Detroit. If he had a quarter wid a hole in it he would frow it in de ribber fur fear of accidentally passin' it off on a millyonary.' Dat sot me to thinkin'. Dat very night I stole a lot of wood, three chickens, a bag o' taters an' a pair of butes, an' I hev prospered ever since. I specks it will be a leetle harder on me when I cum to de gates of heaven, but I am doin' powerfully well down yere below an' increasin' my fat ebery day.'—Detroit Free Press.

Look Out For the Linings, Ladies.

Miss Henkleman—What a lovely gown, dear, from Paris, of course?

Miss Whitelyar—Yes, I can't get suited anywhere else, it came on the Umbria, Tuesday.—Scribner's Magazine.

He Tumbled.

"Look here, captain," began a prisoner who had passed a couple of days in a cell at headquarters, "I want some information."

"About what?"

"Why don't you provide these cells with beds, carpets, rocking chairs and other comfortable things, so as to make a prisoner's stay pleasant?"

"Why didn't you go to a first class hotel instead of coming here?" queried the captain in reply.

"Ah! I see. I tumble. Nuff ced. It all depended on me, and I skipped the tra-la-lu."—Detroit Free Press.

A Great Question Settled.

A St. Louis "newsboy," aged 25, has died, leaving an estate valued at $23,000, accumulated in fifteen years. This seems to answer the oft propounded query, "Does Literature Pay?"—Norristown Herald.

How to Get Rich.

"James," said the proprietor, "have you marked all the holiday stock up 25 per cent.?"

"Yes, sir."

"Then put a sign on the window saying that we are selling out at cost."—Clothier and Furnisher.

A Good Chance.

Tobacco Chewing Husband (after ascending the stairs)—I'm all out of breath.

Wife—Then kiss me, please.—New York Weekly.

A Divided Duty.

Woman (to tramp)—There, I have obeyed the divine injunction to "Feed the hungry," and now I hope you will remember that one good turn deserves another, and chop a little wood for me.

Tramp—I'm very sorry, mum, but I've got an engagement, an' must hurry off.

"Why, what have you to do?"

"It is my solemn duty, mum, to go out into the highways and byways, and tell hungry gents like myself that this 'ere house is a good place to git a square meal."—New York Weekly.

More Than He Bargained For.

—Texas Siftings.

Everything in the Style.

Senator Matt Ransom is back from North Carolina, happy over his re-election and handsomer than ever. His pose for the galleries is strengthened by some new elements. A brother senator who congratulated Ransom on his re-election slipped back into the cloak room and told this story:

"I never see Matt Ransom without thinking of an incident they tell about down in his own neighborhood. They have the biggest fair in the state there. One year a lank, lean mountaineer brought a horse down to the fair. It was blind, spavined and had the glanders. A sorrier looking beast couldn't be found in that country. The horse dealer showed his paces all around the track.

"'Take a look,' he cried, 'at the finest hoss in Northampton county.'

"He had gone half way around the track when a man came up to him and said:

"'Look heah, stranger, that hoss is blind.'

"'Can't help it, it's the finest hoss in Northampton county,' and the mountaineer passed on a little further. Somebody else struck him and said:

"'Hello, there, that hoss is lame.'

"Still the mountaineer called out:

"'Take a look at the finest hoss in Northampton county.'

"He had got around the circle when Matt Ransom met him. Thinking he would have some fun the senator went up and said:

"'That the finest horse in Northampton county? Why, it's lame, blind, and wheezes like thunder. What are its good points?'

"The mountaineer sized the senator up, changed his cud of tobacco, and said:

"'Can't help that, boss; its name is Matt Ransom, and it's —— on style. That makes it the finest hoss in Northampton county.'"—Washington Cor. New York Tribune.

A Cheap Lesson.

"That piece of paper isn't worth shucks, is it?" queried a stranger as he handed a check in to the cashier of a Griswold street bank the other day.

"No, sir," was the reply after a brief glance.

"It is signed John Smith."

"I see it is."

"He's a fraud?"

"I think so. Where did you get the check?"

"At the depot. Lent a party $20 to get off on a train with, and he gave me this check of $50 as security."

"You have been confidenced."

"I know it. I knew it half an hour ago. When I started to come to town my brother said I'd let some one make a fool of me."

"And you have."

"I have. Turned out just as he said. Say, wasn't that confidence operator rather fresh?"

"How?"

"See here. Here's a wallet with $3,800 in it, and the fool only asked we for $20! Won't he kick himself if he ever finds out how cheap he let me off!"—Detroit Free Press.

Her Congratulations.

Millicent—There, I must tell you a secret, dear—Mr. Sanders proposed to me last night.

Ruby—How delicious! You accepted him, of course.

Millicent—He was so persistent that I really had to. I think we will get along nicely, don't you?

Ruby—Ever so nicely! As you know, he is not at all fastidious.—Binghamton Republican.

A Gentle Hint.

She—What's that noise on the street, Mr. Stalong? Could you distinguish it?

Mr. Stalong—Some noisy fellow going home, no doubt.

She—Oh! I thought it sounded like newsboys calling out the morning papers.—Burlington Free Press.

Look Before You Leap.

He—You wouldn't care to know Goodfellow, Miss Smart; he's awfully bad form—a regular cad, you know.

She—But I do know him.

He—Really now!

She—Yes, and I am going to marry him next month.—Scribner's Magazine.

NYE AT NIAGARA.

He Braves a Storm and Interviews Pocomoco.

We visited the falls on the day of the blizzard which wrecked Reading and which wound up by tipping the suspension foot bridge at Niagara into the river below. The falls have been visited in summer and in winter, in the broad glare of day and the soft and mellow moonlight, but very few people have gone there during a blizzard.

The day broke moist and measly at Buffalo, but at noon the gray and choppy clouds scattered a little and a patch of sky could now and then be discovered. Eating a hasty meal, our party, arrayed in alpenstocks and conscious rectitude, began the ascent from Buffalo by a circuitous route. We reached Niagara Falls station, whence we proceeded by drosky to our chalet. Here we alighted. The chalet is kept by a native American, and after our long journey from Buffalo it was good to once more hear the music of our own language. Hastily eating a light lunch, we put on our topcoats, and in charge of a John Darm we proceeded by diligence towards the falls via the American side.

The storm now burst upon us in all its fury, and the rain descended in the wildest profusion, saturating the falls and rendering them well nigh impassable. Our muleteer covered himself with his pontoon, wrapped his tarpaulin around his ears, and while our slender diligence swayed in the blast he drove us across to Goat Island. The thunder of the immense volume of water was now swallowed up by the mighty roar of the bursting tempest, and then, as it died away like the wail of a perishing soul, one would again hear the sullen thunder of the great American dam site.

We now began the descent on the side of Goat Island looking towards the Great Horse Fall. The rain fell in torrents, and as our umbrellas had been turned wrong side out by the blast, we were soon wet to the skin. There we stood in the presence of the greatest spectacle America can produce, perhaps, outside of congress. Like an egotistical author Niagara for centuries has been pouring over its own works. It is really, however, beyond criticism. I went there thinking that if the Falls really deserved scathing, I would scath them through the press and injure their business; but I must say that, like Mr. Booth, they deserve their great success, and I do not blame them for respecting themselves and having their pictures taken every little while and getting their names in the papers. They deserve all the glory they have got, and far be it from me to put a straw in the way of the progress of Niagara Falls.

We next went down to the Whirlpool, and on the way a detachment of John Darms escorted us with an air of suspicion. Our drosky driver evidently watched us every moment like a cat. At the whirlpool we alighted again, being narrowly watched by the driver and a John Darm from Cohoes.

Here as we reached the brink of the cliff the blizzard struck us amidship, and the great Niagara which has assisted so many temperance lecturers in scaring to death the moderate drinker seemed to become silent in the presence of old Mr. Blizzard, from the wild and unkempt west. Just then my high silk hat, which I wear in ascending the Alps and doing the tourist act generally, went up into a large blue hole in the sky, and while I was watching it the square red remark, "Keep off the grass," with an iron rod on one side, swatted me across the organ of alimentiveness.

The storm was now at its height. The roof of the hotel gently lifted with the breeze, and through the fast falling rain we could see a surprised gentleman in his room just emerging through the neck band of a bright new shirt. With a look of horror and wonder he tried to pull down the roof again and conceal himself, but he could not do so.

The storm now took off its coat and shrieked, while the Whirlpool was lashed to its greatest fury, and at the Whirlpool bazar genuine Indian moccasins, made in Connecticut, went down to $2 a pair. I made a movement towards the brink of the precipice, intending to peer down over it into the boiling waters, when I felt the grasp of a gendarme on my shoulder and I was jerked back with an oath which would have sworn in a whole precinct of non-residents at a presidential election.

"Monsieur fool heemself!" said the John Darm in pure Buffalo French, with a slight patois of the Rue de Main street. Then grinding his teeth he managed to make me understand that I had stated in Buffalo that "I was going over the falls and through the whirlpool," but that a nemesis was on my trail. It is very disagreeable to have your trail stepped on by a nemesis, and so I explained that I meant to be figurative, and so, when the John Darm had opened my overcoat and found that I was not dressed in tights with double leaded bridge jumping shoes, he allowed me to pass. It was here at the bazar that I met my old friend Pocomoco, of the Piute tribe of Indians. "And what are you doing here, so far away from home, Pocomoco?" I asked, in the light running domestic accents of the Piute tongue.

"I am here," he replied in the same language, "to procure our regular supply of Indian relics for the coming year. We cannot compete any longer with Connecticut in the manufacture of genuine Indian relics. So we come to Niagara Falls for them. We also get most of our ornamental bead work done in England, and our ornamental massacre business is done there too. The white man has facilities which we do not have, and so the red man's goose is practically cooked. We buy all our weapons and headache sticks now at New York. We get our bows and arrows made at Waterbury, Conn., and Boston furnishes us with our lingerie. We can buy arrow heads cheaper than we can make them, and why should we toil over a home made arrow head all day when he can steal a horse in ten minutes that will bring us nice new relics enough to last us a year? We have in our tribe favored free trade, and so we with our infant industries are thrown into direct competition with the pauper relic makers of the Bowery. You can buy a good scalp at Chatham square for sixty-nine cents today, and so the war path is practically overgrown with grass. In a year or two men with sample cases will no doubt visit the Indian tribes and sell their year's supply of everything in that line. We are utterly discouraged. There has not been a warlike attitude among the Piutes since the Buckwheat Pancake Outbreak of '55."—Bill Nye in New York World.

PITH AND POINT.

—What we are at home is a pretty sure test of what we really are.

—When a gentleman loses his temper in talking, it is a tolerably correct sign that he is getting "the worst of the argument."

—Employment, which Galen calls "nature's physician," is so essential to human happiness that indolence is justly considered the mother of misery.—Robert Barton.

—Next to moral weakness, a fear of the difficulties to be met is, undoubtedly, the most unfortunate mental trait of any young person.

—Most natures are insolvent; can not satisfy their own wants; have an ambition out of all proportion to their practical force, and so do lean and beg day and night continually.—Emerson.

—The responsibilities of life are gauged not by what we are but by what we may become. The man who has ventured only to the limits of his conscious force has only reached the threshold of his possible attainments.—F. G. Clark.

—Thoughts are the first-born, the blossoms of the soul, the beginning of our strength, whether for good or evil, and they are the greatest evidence for or against a person that can be. "Thou understandest my thoughts afar off." "Try me, and know my thoughts: * * * and lead me in the way everlasting."—Thomas Brooks.

—Men that look no further than their outsides, think health an appurtenance unto life, and quarrel with their constitutions for being sick, but I, that have examined the parts of man, and know upon what tender filaments that fabric hangs, do wonder that we are not always so, and, considering the thousand doors that lead to death, do thank my God that we can die but once.—Sir T. Browne.

—Originality is the cradle in which eminence is nursed, for originality lifts men from the beaten track of the past into unexplored fields, giving the world new productions in science, literature and art. To succeed, a man must be original, and his performing a certain act must not be because some one else did it, but because from his own observation he knows it to be proper and correct.

—It is hard to tell which of the two is the more pitiable—the over-nice reasoner, who never comes to any conclusion, or the vacillating, double-minded man, who never decides to act. He is like the farmer in the Book of Ecclesiastes, who is always observing the clouds and the wind to make sure of the exactly right time for his work. As "the Preacher" says: "That man will never sow and will never reap;" or, as Sir Philip Sidney says: "Whosoever, in great things, will think to prevent (anticipate or forestall) all objections, must lie still and do nothing."—S. S. Times.

THE NATIONAL GAME.

What Shakespeare Says About It in His Dramatical Works.

The game of base ball is generally supposed to be a modern pastime, but a look through Shakespeare will convince one that the game is of remote origin.

Your base (foot) ball players.—"King Lear."

Why these balls bound.—"Merry Wives."

Now, let's have a catch.—"Twelfth Night."

I will run no base.—"Merry Wives."

And so I shall catch the fly.—"Henry V."

Let me be umpire in this.—"Henry VI."

A hit, a palpable hit.—"Hamlet."

Hector shall have a great catch.—"Troilus and Cressida."

More like to run the county base.—"Cymbeline."

As swift in motion as a ball.—"Romeo and Juliet."

He'll leave striking in the field.—"All's Well."

After the score.—"Othello."

Ajak goes up and down the field.—"Troilus and Cressida."

Have you scored me?—"Winter's Tale."

And the third nine.—"Coriolanus."

He proves the best man in the field.—"Henry IV."

The word is pitch and pay.—"King John."

However men do catch.—"Tempest."

What foul play had we.—"Titus Andronicus."

Unprovided of a pair of bases.—"Henry IV."

His confounded base.—"Henry V."

No other book but the score.—"Henry IV."

I will fear to catch.—"Timon of Athens."

Where go you with bats?—"Coriolanus."

Let us see you in the field.—"Troilus and Cressida."

Thrice again to make up nine.—"Macbeth."

Judgment.—"Hamlet."

—N. Y. Graphic.

Violating the Proprieties.

"Such a dinner as you wish to give," said the fashionable caterer, "including champagne, of course, will cost $4 a plate."

"But I don't care for champagne. What will it cost with beer and lemonade instead of champagne?"

"Just the same," replied the dignified caterer, stiffly. "I could not, with propriety, ask any of my young gentlemen to wait upon the table at such a dinner without giving them extra compensation.—Chicago Tribune.

THE ARIZONA KICKER.

Pleasant Information From the Glorious and Boundless West.

We extract the following from the last issue of the Arizona Kicker:

POOR SHOOTING.—As we were returning to our office from the Widow Smith's the other evening (we have been sparking the widow for several weeks past), and just as we came opposite the old Indian fort, some person whose manners certainly need polishing up, fired four bullets at us from a revolver. The intent, no doubt, was to kill us. It took us about the millionth part of a second to realize this fact, and then we opened out for a run and made good our escape. We don't claim to be great shakes on shooting, but if we can't hit the editor and proprietor of a great and growing weekly at a distance of twenty feet once in four shots, we will leave Arizona. We don't claim to be a Chesterfield, but if our manners permitted us to hide away behind an old wall and begin popping at a gentlemen without warning, we'd expect to be mentioned in the same line with a hyena.

TOO MUCH TALK.—There is altogether too much talk about that mistake of our popular young druggist of the Blue Front which sent Colonel Jim Jackson to his grave. Colonel Jim asked for quinine and got strychnine by mistake, but there are a good many redeeming features. The Colonel was old, lazy, and drunk half his time, and left no one to mourn his loss. The druggist is a young and energetic man, who sold out a coal-yard in Chicago to come here and go into the drug business, and it must be expected that he will make a few mistakes in the go off. We call attention to his liberal manner of advertising in the Kicker. He has assured us that such a mistake can not occur again, as he has properly labeled the bottles.

ANOTHER LIE NAILED.—Our esteemed contemporary down the street charges us with bulldozing the business men of this town into advertising with us. We nail the statement as a lie, and every business man will nail it as a lie. Our methods of securing advertising have always been perfectly legitimate. If a man who fled from Ohio to escape State prison for arson opens a grocery here we drop around for a friendly chat with him, and we let him know that we are posted on him. Then we set forth our circulation and influence, give him rates, and if he says he doesn't want to advertise that ends it. While we advise all to advertise, we never bulldoze, as all can testify. If bulldozing would secure advertising the old clap-trap concern down the street covered with mortgages would be quite apt to try it.

APOLOGETICAL.—During our absence last week an item crept into the local columns which has stirred up considerable feeling. It was in relation to the death of Judge Handy, and the writer of it supposing truth was demanded, said, the deceased was an old loafer, bummer, drunkard and deadbeat, and that he was found dead beside a jug of whisky. The friends of the deceased are justly indignant at this expose, although they do not dispute the charges. We are very sorry that any thing of the sort should happen, and are now preparing an article for next week, in which the judge is complimented for his sobriety and love of cold water—praised for his honesty and integrity—complimented for his public charities, and referred to as one of the most upright men west of Chicago. While all know better, and while the whole thing will be a falsehood, we shall be smoothing it over for his friends. Extra copies, done up ready for mailing, only five cents each.—Detroit Free Press.

DAHOMEY'S AMAZONS.

The Female Body-Guard of a Cowardly African Tyrant.

The black female warriors of the warlike tribe of Dahomey belong to the romance of the Dark Continent; but the latest African discoveries are sweeping away much of the illusive nimbus which has hung over this State and its terrors. The King of Dahomey for a long time kept the neighboring tribes in fear, and when he with hundreds of his people suddenly invaded a peaceful land to capture slaves, opposition was not to be thought of; for if any one lost his head and resisted capture with weapons, he was pretty sure to have his head cut off. However, of late the neighboring tribes do not pay as much respect to the Dahomey tribe as formerly, for the King was recently attacked by a tribe from the North, and his renowned women-guards took to flight when the arrows really began to whistle through the air. This Amozonian guard of fifteen hundred women is the flower of the army. They by no means resemble the valiant Amazons of the Grecian myth; they are negro women, nothing more nor less than the King's wives, whom he keeps under strict discipline and craftily makes use of as his body-guard. The King of Dahomey knows that his wives are as indolent as all negroes are, although they are made hewers of wood and drawers of water the world over, and so he compels them to work like men. The women of Dahomey consequently go to war, with shield and weapon, but the heroic courage formerly ascribed to them only exists in legend, for they are driven into battle by their royal and domestic tyrant, and are nothing more than food for powder.—Demorest's Monthly.

—Stuffed Spare-ribs: Take a large rib, stuff with sage and onions, and lay on potatoes. Set on the stove and bake brown.

THE FRAUDULENT PRESS.

Why Elisha Botts Has Lost His Respect for American Journalism.

An old fellow called on the manager of the Western bureau of press clippings.

"Look here," said he, "some time ago I hearn of your institution an' thinkin' that it mout be a good thing I j'ined it."

"What is your name?"

"Elisha W. Botts."

"Yes, I remember, we have your name."

"Yes, wall as I ain't hearn nothin' frum you I 'lowed that I mout have misunderstood the workin's of your establishment."

"It is perfectly plain," the manager replied. "We look over several thousands of papers every day and whenever we find any thing relating to a subscriber we clip it out and send it to him."

"But you ain't sent me nothin' yet."

"Let's see (turning to a book), you live down in Southern Indiana?"

"Yes."

"Are you a prominent man down there?"

"Wall, I reckon I orter be. I run fur jestice of the peace last year an' wa'n't beat by more than fifteen votes."

"Are you much known in a business way?"

"You air talkin' to the p'int, now. Year before last I was app'inted administrator for the Widder Beason's estate. Knowed much! Why, I reckon I am."

"Yes, so I see, but the papers haven't said any thing about you."

"How many of them air there, anyway?"

"Some fifteen thousand in all, I believe."

"And not one in all that number has said any thing about me?"

"Not that I have been able to discover."

"Wall, that's strange. Did you tell any of 'em that I had j'ined this socyation?"

"Oh, no; we do nothing in that line."

"Then you don't make the press talk about a feller?"

"No, we can't do that."

"You say there are some fifteen thousand of them?"

"Yes."

"And not one of them has mentioned me?"

"Not one."

"Do you want to know what I think about the press of this country? I'll tell you. I think it is a blamed fraud. I told my wife that after I j'ined this thing she could fill a scrap-book full of things about me and her and the children, an' not a line have we got, an' the neighbors air droppin' in ever' once in a while waitin' to know what the newspapers have said about me. The newspaper press of this country is a blamed fraud, sir."—Arkansaw Traveler.

Physicians in Russia.

Dr. C. Yaroshevski contributes to the Russkaya Meditsina as article on the state of the medical profession in Russia. He points out that there are only 18,000 doctors for a population of 100,000,000, or one medical man to every 6,500 persons. This number of doctors in proportion to the population is very much less than in other European countries, yet the destitution among members of the profession is alarming. Of late there have been numbers of suicides of medical men who were without the bare necessities of life. The fees for medical attendance are very low. Still, in Odessa, 40 per cent. of the whole population and 94 per cent. of the very poor died without having had medical attendance. A similar state of affairs exists at Kostrome. Dr. Yaroshevski attributes this deplorable condition of things to the ignorance of the Russian people, who prefer to consult soothsayers and magicians rather than educated medical men, to the monopoly enjoyed by the pharmacists, and to the large number of Feldshers who are allowed to practice. The Feldshers are men who have some rough knowledge of surgery and the use of a few drugs. They are generally men who have served in the Ambulance Corps or have been hospital attendants, and on the strength of this slight knowledge they are licensed to practice.

—Benevolent old gent—"How my heart bounds when I see the happy faces of childhood. Note the beaming smile of the little boy now approaching. Heaven itself seems to have illuminated those little features. I will speak to him. One moment, little boy. Why are you so happy?" Little boy (grinning)—"Ma got mad and spanked me with her new four-dollar hair brush and—she broke it."—Philadelphia Record.

LITTLE'S

CHEMICAL FLUID

NON-POISONOUS

SHEEP DIP.

One gallon, mixed with 60 gallons of cold water will dip thoroughly 150 sheep, at a cost of 1 cent each. Easily applied; a nourisher of Wool; a certain cure for SCAB. Also,

Little's Patent Powder Dip,

(Poisonous.)

Mixes instantly with water. Prevents the fly from striking. In a 2 pound package there is sufficient to dip twenty sheep, and in a 7 pound package there is sufficient to dip one hundred sheep.

SAN FRANCISCO, CAL.

INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY APRIL 6 1889

At a recent meeting of the Chamber of Commerce of Los Angeles, it was resolved to incorporate a company for having a grand industrial display for Southern California. The capital stock of the company will be one hundred thousand dollars. A suitable location will be secured and extensive buildings erected for the exhibit. Every industry of Southern California will be represented; every product of the mines, the vineyards, the orchards, the farms and the forests. Inyo county will be expected to make first-class exhibit. We have ample resources for making such a display as will put Inyo in the front rank of counties of southern California. The exhibit will be continued about three months, giving ample time for visitors from all parts of the Union to see the display. In one direction Inyo county could make a showing that would be unlike anything else to be seen there, and that would probably attract more attention than anything else to be seen there. Everyone who has visited Woodward's Gardens, at San Francisco, will remember the aquarium containing trout and other fishes. No part of that attractive place is more interesting than the aquarium. We could get up a similar work at this exhibit and make a display of trout and other fishes that would draw crowds of people from first to last. Our golden trout from the streams about Mt. Whitney would be an object of never failing wonder and admiration; there is nothing like them in any other part of the world so far as known. By the use of ice the water in the aquarium could be kept cool enough for the trout. This industrial display will give the best opportunity ever yet afforded for showing the varied resources of Southern California. The idea of this exhibit originated with Mr. W. E. Hughes, a bright, enterprising and honorable man; he is still young, has been in Los Angeles but little more than two years, and already occupies a leading position among the business men of the city.

[A Japanese Temple and Bell.

If I were a good Buddhist I would say a prayer or two to the Chioin bell, the largest in Japan, but a monster breathing sweet music that thrills one from head to foot, and ringing so seldom that the dates are kept in mind carefully, lest one miss the great treat. The bell hangs in a shady little place at the top of a stone staircase by itself, and is struck from the outside by a swinging beam that gives the soft reverberations that do not jar on the ear, no matter how powerful they are. When the huge beam is unchained and swung it is generally at the time of the 5 o'clock mass in the morning, and heavy sleepers have been unconscious of the musical booming and missed it all. Others are wakened by the strange vibration and the soft music ringing and pulsating on the air, and in the half consciousness of waking it seems like part of some beautiful dream. It is the greatest pity that with such a magnificent bell the temple does not see fit to ring it oftener.

The Chioin is a rich temple, and its altar one of the most gorgeous in Kioto, a mass of carved and gilded ornaments surrounding a massive gilded shrine. Occasional worshipers come and kneel on the mats and mutter their prayers, but most often one finds the only occupant of the space before the altar is a lone old priest industriously hammering away at a modern drum shaped like a huge round sleigh bell. From 5 o'clock in the morning until the temple closes at 4 in the afternoon the thunk, thunk keeps up. A nice old woman, who must be a professional mender, from the incessant patching and darning of blue cotton garments that she keeps up, takes care of the shoes while one roams the temple stocking footed, but she does not offer to mend the foreign stockings one wears out on matted and polished wood floors.—Kioto Cor. Globe-Democrat.

Shadowing a Suspected Man.

The work of shadowing a man is easier than a person who has never been in the business would think. You must first study your man thoroughly, so you would know him if you only saw one of his boots, and you must do this without attracting his attention, which is not always a simple thing to do. A man who is to be shadowed is always a man who has reason to suspect that he will be shadowed, and consequently he will be on his guard and very watchful. If the man is not an experienced criminal one detective ought to be able to follow him day and night as long as there is any necessity, but if he is an old hand one man cannot do the work, and can only queer it by trying it. There should be three or four shadows, each one ready to take up the work when for any reason the person who is following the man deems it prudent to quit.

You see an old criminal has many devices for finding out if he is being watched. He will jump on a car, ride a block and get off. Well, if you have not got another man ready to take up the trail then, you will flush your bird. Or he will get into a cab and ride a block or two and get out. We must be prepared for all that sort of thing. Usually the shadow will keep on the other side of the street from his man, from a half to a whole block behind him, and pay as much attention to keeping himself from being noticed as to watching the other fellow. It is work that not one detective in twenty can do scientifically, although some men are very expert. I know a man that saw a criminal make out an improper voucher, went with him and saw him get a check for it, then walked with him to the bank, saw him cash the check, and arrested him while he was counting the money.—Detective in Chicago News.

MARBLEHEAD NECK.

The waves beat idly, with a cageless roar
And to and fro the seaweed beats to me,
Kissing the great red rocks along the shore,
But thou, beloved, are not here to see.

The sun goes down in glory in the west,
Bathing in crimson every flower and tree,
The white sails redden on the ocean breast,
But thou, beloved, are not here to see.

The twilight gathers and the moon rides high;
I watch its silver track and think of thee:
God keep thy path as bright from earth to sky,
When I, beloved, am not here to see.

—Sarah K. Bolton in Home Journal.

A Balloonist's Big Jump.

"I have made," said Professor E. D. Hogan, "163 ascensions and three jumps. One jump, made out in Jackson, is the biggest on record—9,800 feet. I shot down 400 feet before my parachute opened. The popular impression is that the parachute opens with a snap, but this is not so. First one section opens, then another, and so on by easy degrees, and as I've watched it opening when it was just above me and was thousands of feet up in the air it reminded me of a rose opening in the morning.

"How did I feel when I made my first jump? Oh, well, rather afraid. I looked down and saw the hills and fields away below me, and the people looked barely a foot high, and the buildings looked like toy houses. I looked down and shivered when I saw the space between me and the earth, and then looked at the barometer and found the distance to be almost one and a half miles; but all the same I jumped. I leaped into space hanging to the parachute, and down I went like a shot for 200 feet. The parachute then began to open, gradually lessening my velocity. I heard the people's applause very faintly. It rose up to me like the merest suspicion of a sound. I afterward learned they clapped and cheered for all they were worth. The parachute was oscillating somewhat, and I came near being banged against several chimney tops. The buildings are our greatest terror. Many an aeronaut has been dashed against a building and killed—more, in fact, than being dragged over rugged ground. I met with one accident. See here," pointing to a big bulb on his right ankle. "I got that in Nebraska in August of 1883 by being dragged over a heap of rocks. I never could bend that ankle since—can't even stand on that foot alone.

"You see a great panorama from a balloon in mid air," continued the professor, "but, of course, the landscape is all in miniature and through a slight haze."—New York Evening Sun.

The Child's Voice in Singing.

Frederick S. Law, in The Voice, dwells at length on some of the dangers of allowing children to sing in public, particularly when under the care of ignorant or irresponsible conductors. One case is mentioned of a girl who was permitted to sing in halls large enough to test the powers of experienced artists, and who, consequently, at the age of 16, although she had started out with great promise, had no voice at all left. "It is," says Mr. Law, "as much of an impossibility for a child to produce full and sonorous notes as it would be to load it down with heavy weights and expect it to walk at once. Many who would regard the latter as an act of cruelty will listen with complacency to a child straining every nerve to fill a large room with a voice that from its nature is not intended for such use."

Mr. Law concludes: "The instruction of children, as regards the voice, should be almost entirely negative—that is, they do not require teaching what to do so much as what not to do. They may be trusted to form their tones as they please, if they do not sing too loudly nor with any undue effort. If these conditions cannot be secured, they should not be allowed to sing at all. Nothing is more painful than to hear a child struggle to fill a large room with a voice crippled from an attempt to wrest from nature what is not there. In no way can we find compensation for such an exhibition. The mind receives no pleasure, as there can be no intellectual grasp of the subject, while the ear is tortured by shrill and distorted sounds which awaken a natural anxiety for the child's future welfare. A healthy child possessed of a good ear is the most natural singer in the world, because the most unconscious. It is only when tampered with by those who should know better that disastrous results are to be feared."—Brooklyn Eagle.

Description of a Turkish Dinner.

Rousseau has said that from the food of a nation you can tell its characteristics; if this is true, no better spot for the study of ethnology could be found than Cavalla. Doubtless, if it be desired, an opportunity will occur of dining with many nationalities. By all means accept an invitation to dine with a Turkish pasha. I had the pleasure of taking a meal with the governor of Drama, who is passing rich for a Turk, seeing that he rules over the plain where the chief tobacco crops are, and his opportunities for amassing wealth are many and varied.

Silence and expedition are the chief characteristics of a Turkish meal. The table preparations are few, but the dishes are many; olives, caviare, cheese, etc., are dotted about, and perhaps as many as ten dishes are handed round on covered brazen dishes, consisting of rice or barley, meat or boiled fish, cakes seasoned with vegetables, roast lamb, beans, a species of rissole wrapped up in vine leaves, the inevitable pilaf and fruits, and, as wine is forbidden, an intoxicating substitute is found in liquors and brandy. Each person has his glass of sherbet by him, and his piece of unleavened bread, for the Turks love half baked dough. It will comfort the European to see every one wash his hands before his meal, for forks are unknown, and each is expected to dip his fingers into the savory morsel as it is handed to him. During the whole of the feeding process scarcely four or five words will be uttered, and at the most your repast will last twenty minutes, but then afterward, with the coffee and the hubble bubble, conversation will flow freely. To the Turk eating is a serious gastronomic exercise, which will not admit of any conversation being entered into during its progress.—Cornhill Magazine.

Can Your Boy Swim?

Can your boy swim? No? Then do not trust him in any sort of boat until he has learned the art, and feels as much at home in the water as upon dry land. You might just as well send him out alone into a crowded street before he had learned to walk. He might possibly creep along all right, and reach home alive, or somebody might pick him up and care for him, but the chances would not be in his favor. So in boating, the boy who cannot swim may get along very comfortably for a while, and not suffer from this defect in his education, but the time will assuredly come when he will have cause to bitterly regret it. It is one of the simplest things in the world, too, and can be learned in three or four intelligently directed lessons, such as can be had in any city swimming school or from the experts in any country village. By all means talk swim to your boy before you talk boat, and stipulate as one of the conditions of his having a boat that he shall first be able to swim a quarter of a mile without resting.—Harper's Young People.

Sighing for Union Square.

"The world is mine," exclaimed the tragedian, in "Monte Cristo," and the comedy man waiting for eight weeks' back salary, murmured faintly: "Cut me off a piece of New York, please."—The Idea.

The Capital of Brazil.

Rio is a succession of disappointments. The only really pretty place is the Botanical garden, which serves to illustrate what the whole city might be. All varieties of food are peddled about, the venders attracting attention by clapping pieces of wood together and uttering peculiar cries. There are plenty of street car lines, and the cars are always crowded. Everybody reads a morning paper going down town, and an evening paper returning. Humming birds are as numerous as flies, and at night the air is full of fireflies that look like a shower of stars. The women have a bilious look, and are invariably fat, while the men are invariably lean. Next to her complexion the ugliest thing about a Brazilian woman is her voice. She never goes shopping, the servants doing it for her, or going to the shops and getting samples, from which she makes her selections at home. She is famous for her embroidery, made by her own hands. She is generally intelligent, learns readily and has considerable wit. She never goes out alone to call on friends and receives no gentlemen except in the presence of husband or parents.—William E. Curtis.

Cause of Premature Age.

"I have 500 gray hairs in my head and I'm only 36," said a friend to me, and coming down in a street car another friend took up the same theme and asked: "Why is it we get old so quick in this country?" I could not say, not being old. "We live in such a hurry," he said, answering his own question. "All we think of is getting money in this country. In the old country they think of spending it. I mean that we are reckless of how the money goes after we get it, and so we are extravagant and need more money and strive harder to get it, and get old young. I believe there are more lunatics in this state of New York with its five and a half millions than in all France with its thirty-seven millions. In France a man regulates his spending. He has so much income. He makes it go as far as it will, and lives in a regular and methodical fashion on that basis. He doesn't grieve for more because he can get comfort out of what he has. But here we are so anxious to make that we neither spend with economy nor get comfort out of what we spend. We waste our strength to get it, and then waste what we gain, for we don't get the good of it."

SATURDAY, APRIL 6 1889

C. B. Rawson was in town during the week.

Mr. C. H. Parsons, of Round Valley, is visiting at Independence.

Mr. J. S. Gorman came up from Keeler on Thursday morning's train.

Paul Myrtengreen is piloting Mairs' team on its return to Mojave.

"Sidy" is doing the swamping act for Mairs' team on its trip to Mojave.

Mrs. S. Decker, of Lone Pine, made a short visit to Independence on Wednesday.

John Bright, one of England's ablest statesmen, died at London on the morning of the 27th ult.

California Post No. 142, G. A. R., has returned to Independence, where regular monthly meetings will be held.

Miss Maggie Dalton, of Benton, Mono county, came down on Monday's train. She is visiting with Mrs. J. R. Eldred.

Rudolf Schober has started for Mojave with five tons of outgoing freight. Rudolf don't let little things discourage him.

Mr. V. G. Thompson arrived from Mojave on Thursday. Mr. Thompson has been in ill health for some time past.

Mrs. Jennie Lillard, who has been visiting for some time past with the family of W. S. Enos, at Camp Independence, has returned to her home at Davisville.

Al. Staudinger was in town a couple of days this week. He has been making a trip through the valley taking orders for monumental and other marble work.

"April showers bring May flowers." If so there ought to be plenty of them, as there has been delightful showers in the day or two, accompanied by a warm south wind.

A. R. Conklin Esq. has been elected by the Odd Fellows Lodge of Independence as representative to the Grand Lodge, which meets in San Francisco some time next month.

J. J. Gunn has leased his saloon business at Independence, P. Carroll now being in charge. Mr. Gunn has gone to Lookout to look after valuable mining interests he has there.

Mr. J. C. Crocker and his son, Fred Crocker, went out from Big Pine last Tuesday on their way to San Francisco and San Luis Obispo. They expect to return about three weeks hence.

Gus McGovern passed through town on Wednesday with a 12-horse team loaded with freight for Bishop. Part of his load was kerosene for C. A. Levy. Gus. says he will return immediately.

Religious services will be held at Lone Pine next Sunday at 10:30 a. m.. Sunday school at 11:30. Preaching at Independence at 7 o'clock p. m. Sunday school at 11 o'clock a. m.

A strike of good ore is reported at the head of Mazourka Canyon; parties who are prospecting there came in for supplies on Tursday and returned next day. That there is plenty of undiscovered mineral in the Inyo range there is no question.

An Independence young man had a close call on his eye the other day and a piece of court-plaster covers up the wreck. Young ladies should be careful how they wear their breast-pins. The lip on another of our boys bears evidence of too close proximity to a set of pearly that he wasn't the owner of.

Harry Jiggens and Paul Myrtengreen got in from Mojave with a big team on Wednesday loaded with merchandise for parties here. H. H. Spear's team passed through on the same day with a load of freight for Bishop. The freighting business is now on a firm basis.

Hon. John A. Hannah returned from Los Angeles on Thursday. The Judge says that one day in the city was enough for him. Los Angeles has grown so much since he was there seven years ago that he could not tell within three miles of where he was. The growth of that city has indeed been remarkable.

Doctor Bishop, of Reno, spent most of last week on his land under the Eastside canal. He is more than ever pleased with the country; he said he would not take fifty dollars an acre for his tract. This is not bad for land that a year or so ago was regarded as utterly worthless. The Doctor is putting most of his land into raisin grapes.

Mr. Carr announced yesterday that during last year they put up 50,000 tons of alfalfa hay at a cost of one dollar a ton in the stack, and it could all have been sold for six dollars per ton. This should be taken into consideration by that class of people who are wondering if farming will pay here.—*Californian, Bakersfield.*

Ben says he don't mind fixing the ground and will tend the flowers when they grow, but he'll be—blessed if he knows how to plant 'em. Somewhat on the same line is another of our county officials, who—

"When well apparel'd April on the heel
Of limping winter treads,"

Hied himself forth and planted fifty pounds of potatoes in seven hills.

The orchards around Independence now look beautiful. Peach trees are as full of blossoms as they can be, and their bright colors glow like immense bouquets. Apricots and nectarines are nearly done blooming and on many of them the young fruit is well set. Pear trees are very full of flowers and on many of them the young fruit is well set. Apple trees are out in full bloom.

A fine ore body is reported to be opening up in the La Grange mine, about eight miles north from Bishop. An air shaft is being opened upward from the tunnel; This is about completed, and when the opening is made ore will be taken out at once. It is said there is ore enough in sight to supply the mill at least a year, and it is of good quality. This property was formerly known as the Casey mine.

The trout law went off last Monday and a number of local sports to piscatorial pursuits inclined took a trip up the creek. They reported poor luck and say there are beaten paths on both sides of the stream evidently made by parties fishing for some time past in defiance of law. This is a petty piece of meanness that deprives the lovers of angling who are disposed to be law abiding of good sport.

PETITIONS FOR MAIL ROUTE.

Following are copies of petitions from the Los Angeles Chamber of Commerce, from the Board of Trade, and from prominent citizens.

LOS ANGELES, March 15, 1899.

To the Hon., the Postmaster-General of the United States—We, the undersigned, citizens and business men of Los Angeles, petition: That a daily mail service be established from the town of Mojave, in Kern county, California, on the line of the Southern Pacific railroad, to Olancha, a distance of 100 miles; thence to Lone Pine, 25 miles; thence to Independence, 61 miles; thence to Big Pine, a distance of 28 miles; thence to Bishop, 17 miles, in all 186 miles. And that the same be ordered to take effect as soon as possible. And your petitioners will ever pray. [NUMEROUSLY SIGNED.]

LOS ANGELES BOARD OF TRADE,
March 16, 1889.

To the Hon. Postmaster-General, Washinbton, D. C.—Dear Sir: We present to you, through our Representative, Hon. W. H. Vandever, a petition signed by the members of our Board for the establishment of a daily mail service from Mojave, in Kern county, to Bishop, in Inyo county California. The particular objects for this increase are fully set forth in a petition signed by residents of Kern and Inyo counties. The mail service prayed for will be of great convenience and advantage to our commercial interests, and we most respectfully request that you give the matter serious consideration, and if possible grant the request. Very respectfully,

EUGENE GERMAIN,
President.

Attest: T. H. WARD,
Secretary.

LOS ANGELES CHAMBER OF COMMERCE,
March 16, 1889.

To the Hon., the Postmaster-General of the United States:—At a meeting of this Chamber, held Wednesday, February 13, 1889, after full discussion, it was unanimously resolved to recommend to your Honor the establishment of a daily mail route from the town of Mojave, in Kern county, California, via Olancha, Lone Pine, Independence, Big Pine and Bishop, a distance of 186 miles, for the following reasons, to wit: That Los Angeles is the natural outlet of that county, and only from Mojave by rail one hundred miles; that formerly a daily mail was had with that county from Los Angeles, and the present tri-weekly is much less satisfactory to them and to us; that this route passes through the most thickly populated portion of the county; and for many other reasons set forth in their own petitions.

Very Respectfully Submitted,
M. R. HIGGINS,
Secretray.

Surely this will set at rest all question or caviling as to the nature of the petitions signed at Los Angeles for a mail route to Owens Valley.

One Item.

With rail connection to Los Angeles Owens Valley would be the source of supply for much that the city now gets from far distant regions. The item of potatoes alone would be of a good deal of importance. The daily consumption of potatoes in Los Angeles now may be safely estimated at twenty-five tons. Putting the price at a very low figure, say $16 per ton, the value would be $400 per day. The consumption is continuous throughout the year and at the rate given the sum paid for potatoes in one year would be $146,000. There is no other region that could possibly compete with Owens Valley in supplying Los Angeles with potatoes if we had a railroad. At present the city gets its supply of this article from Utah and Oregon; we would be a thousand miles nearer and would therefore have the business beyond dispute. Another factor in our favor is the greatly superior quality of our potatoes. At the best hotels and restaurants in Los Angeles such potatoes are put upon their tables as disgust people from Owens Valley. Our soil nowhere produces such black and bitter things as are served there. If our potatoes could be sent to the city people would pay a reasonable price for them rather than take as a gift the rubbish now sent them. It would take somewhere about fifteen hundred acres of Owens Valley land to supply Los Angeles with potatoes. The cultivation of that much land, gathering and shipping the crop, would give work to many men and no insignificant business to a railroad; and yet this is but one item that would necessarily follow the building of the road.

A Field for Prospectors.

Developments now going on are daily making plainer what has long been known to experienced miners, namely, that one of the richest mining regions in the United States is in the Inyo range of mountains, on the east side of Owens Valley. Some ledges are now being opened up that are known to be one hundred feet wide and over. The ore carries a high percentage of silver. Looking along the face of this vast mountain range anywhere in Owens Valley ledges can be seen running long distances that beyond question carry silver and other metals. This most promising mining ground lies close to a railroad and to a well settled and fruitful farming country where all kinds of supplies and provisions are easily had and at cheap rates. Skilled miners can here find a good field for operations without having to travel over vast deserts, and subjecting themselves to all the privations and hardships inseparable from desert regions. Rich mines may be found close to railroad, telegraph, postal, and all the other comforts and conveniences of civilization. Sensible men should turn their attention to this country rather than running away to remote, barren and inhospitable regions like Lower California. Here it would be impossible to spread such lying rumors as lured so many men to that country.

A Lovely Scene.

At present the desert from Mojave northward to Owens Valley is wondrously beautiful. For a distance of nearly seventy miles the plains are covered with the loveliest flowers. Great beds, hundred of acres in extent, glow in the sunshine like unbroken fields of gold; other tracts of equal extent are clothed in the richest purple; and others again are covered with flowers of purest white. Looking over the wide plains from an elevation, the scene cannot fail to fill the spectator with delight and surprise. The colors are so bright; each separate flower is so beautiful; the prospect is so extensive and so varied that the most prosaic and matter-of-fact mortals cannot fail to be moved to admiration at the sight of so much beaty, scattered in such lavish profusion over so wide an area. Surely the vast region where so much sweetness is now "wasted on the desert air," is destined to become the home of human beings.

Progress.

It is very important in this age of vast material progress that a remedy be pleasing to the taste and to the eye, easily taken acceptible to the stomach and healthy in its nature and effects. Possessing these qualities Syrup of Figs is the one perfect laxative and most gentle diuretic known.

Well Received.

Last Tuesday evening a large meeting assembled at Spencer's Hall, Bishop, to meet Hon. C. Mulholland and hear his report from Los Angeles. He was greeted with a very hearty welcome. The meeting was called to order by Mr. Robert O'Neal and Mr. J. H. Stoutenborough was chosen Chairman. Mr. Mulholland was then called upon and spoke over an hour; he was listened to with earnest attention and frequent applause followed his statements of the interest taken by the people of Los Angeles in the welfare of Inyo county. It was shown to the meeting the great advantages that would result to Inyo county by the securing of railroad connection with Mojave. The people of Los Angeles have been well informed of the benefit that would result to them from the extension of the road, and they are keenly alive to the fact. The people of Bishop were urged to set out all the apple trees possible in anticipation of the extension of the road to Mojave, as the demand for Owens Valley apples will be immense and the profits of raising them great and certain. The people were urged to send every dollar of business they can control to Los Angeles, and the meeting gave an enthusiastic response that they would. Several petitions for a mail route from Mojave to Bishop had been prepared in Los Angeles; one from the Chamber of Commerce, another from the Board of Trade, and two more from leading citizens. All of these were numerously signed and were handed to the Chairman of the meeting by Mr. Mulholland for transmission to Washington. A hearty vote of thanks was tendered Mr. Mulholland and the meeting adjourned.

Meteorological Summary for March, 1889
Keeler, Cal.

Mean barometer	29.925 inches.
Mean temperature	53°
Highest temperature	75°
Lowest temperature	36°
Monthly range of temperature	19°
Mean dew point, 30°	
Mean relative humidity 46 per cent.	
Prevailing direction of wind, N., & S.	
Maximum velocity of wind, direction and date, 45 miles N. W. 20th.	
Precipitation	0.21
Number of clear days	14
Number of fair days	14
Number of cloudy days	3
Dates of Frosts—None.	

D. C. GRUNOW,
Private, Signal Corps.

Valuable Improvements.

The new water works for Bishop will soon be completed. The main pipe is now laid into the town and the distributing pipes will be put in as quickly as possible. This will be a great improvement for Bishop. Other improvements are being made that will improve the town very much; streets are widened, sidewalks laid, and neat fences put up. At this season Bishop is a pretty town and the center of a nice country. The grain and alfalfa fields are clothed in the loveliest green; the orchards are in bloom and flowers are everywhere plentiful. It is very gratifying to see the improvements made in the town and neighborhood during the last year or two. With fine schools, churches, an abundance of pure water, a fine climate and plenty of cheap, fertile land, Bishop is an attractive place for new settlers.

Stick to the Truth.

It is persistently repeated that when Mr. Yerington was at Los Angeles recently he asked for a subsidy of half a million dollars, and it was refused him. Now the truth is that when Mr. Yerington met the business men of Los Angeles, he began the subject of their deliberation by explicitly declaring that the Carson & Colorado Railroad Company did not want a subsidy. He said subsidies had never failed to be followed with strife and trouble between the people and the companies, and his company did not want to have anything of that kind. We, the people of Inyo county, are engaged in a contest with the C. & C. Company, but that is no reason why we should be about any of their officers. A just cause needs nothing but the truth told about it.

The Barbed Wire Fence Law.

The following is the text of the new barbed wire fence law passed at the last session of the Legislature.

SEC. 593. Every person owning or having charge of, or control in behalf of, or acting for the owner of land adjoining a public highway, or street of an unincorporated town, who shall erect or maintain a barbed wire fence along the line of said land adjoining the public highway, without placing in a substantial manner a board or rail not closer than three feet from the ground on such fence, equal in strength to a pine board six inches in width, one inch in thickness and sixteen feet in length, shall be guilty of a misdemeanor.

This act shall take effect one year after its passage.

Chance for a Worker.

Mr. G. Sanger, of Alvord, has more land cleared this season than he can handle. When at Independence a few days ago he said he would let any person have the use of one hundred acres of land and plenty of water rent free for one year on condition that the whole tract should be seeded with something, he is not particular what, so it should be a staple crop. The land is of excellent quality and joins the railroad. It would produce the best of potatoes and by the time the crop would be ready for shipment there might be an opening for sending it to Los Angeles, where the spuds would be a cash article.

A New Mill.

The new sawmill being built by C. B. Rawson will be ready for work about three weeks hence. The mill is in a fine body of timber and will turn out good lumber. First-class material is used and the building is an excellent structure. The lumber yard is about eight miles north from Independence. The first lumber cut will be used by Mr. Rawson to build a flume to carry water on his land north of the lumber yard. This will increase the water supply to that place about one hundred and fifty inches. The farm is known as the Clark ranch; it is already a valuable place and will be much improved by this increase of water supply.

Profitable Crop

No safer or more profitable investment can be made by land owners in Owens Valley than planting apple trees, the best variety to plant being winter apples. Los Angeles will be the best market in the world for Owens Valley apples, and will take all we can produce. The sooner people plant winter apples the sooner they will have a good income, and without hard work.

FRUIT TREES AND VINES.

PRUNING, BUDDING, GRAFTING, transplanting and setting out all kinds of of fruit trees, vines, shade and ornamental trees. Having many years experience in the best fruit and vine districts of Italy and France, I am familiar with the most successful methods practiced in those countries; methods that are the result of centuries of experiment. Address,
d15-tf ANGELO ROSSI, Lone Pine.

Summons.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

Maggie J. Dunn, Plaintiff, vs. Robert A. Dunn Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to ROBERT A. DUNN, Defendant.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this summons—if served within this county; or, if served elsewhere within thirty days. The said action is brought to obtain a decree dissolving the bonds of matrimony existing between you and the Plaintiff in the above entitled action and giving to said plaintiff the custody of the minor children, Wallace Dunn and Elsie Gertrude Dunn, also for counsel fee, alimony and general relief, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint as above required, the said Plaintiff will apply to the Court for the relief in said complaint demanded.

WITNESS my hand and seal of the said Superior Court of the County of Inyo, State of California, this 6th day of February, A. D. 1889.
(SEAL)
P. H. MACK, Clerk.

[ENDORSED.]

SUPERIOR COURT, COUNTY OF INYO.

Maggie J. Dunn, Plaintiff, vs. Robert A. Dunn, Defendant.

ORIGINAL SUMMONS.

P. W. Forbes, Attorney for Plaintiff. o51

AGENTS WANTED for the MISSOURI STEAM Washer

Active, honest persons all over country, with or without teams.

JOHN C. EVANS, STOUTSBURG, MO., writes: "I stand up and say that a Washer saves more hard labor and money in a large family than any Reaper and Mower that ever was put on any farm with less than 40 acres in cultivation. If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and save as much money as it does and cost no more, I could sell one at every house. It has had to take the feathers from under their wife and babies to pay for it. I think of the Washer I bought last summer. Yes, it is the best thing ever invented by man. $3. We have just as good dinners on Tuesdays as on any other day. $3. If you run short, you can not buy ours!

I will ship a sample to those desiring an agency on a trial on liberal terms. A thousand per cent the best work in the world for saving labor, clothes and soap. Payable agents big money. Write for particulars.

J. WORTH, 1710 Franklin Ave., St. Louis.

ALLEN GRAY;

— OR, —

The Mys'ery of Turley's Point.

Being a Few Romantic Chapters From the Life of a Country Editor.

BY JOHN R. MUSICK,

AUTHOR OF "WALTER BROWNFIELD," "HELEN LAKEMAN," "BANKER OF BEDFORD," AND OTHER STORIES.

[*Copyrighted, 1888, by the A. N. Kellogg Newspaper Company.*]

CHAPTER VII.

"YOU MUST SHOW YOUR HAND."

"I can not go," Allen began.

"You must—you must! For the love of Heaven do not be found within these fated walls!" the beautiful creature whispered, frantically pushing him toward the gate.

Allen Gray was brave and chivalric. Not even to save his own life would he leave her in distress, exposed to some terrible, unknown danger. He was wholly unarmed and unprepared to meet any danger, great or small, but he was willing to face death itself for her sake.

"I can not go—I will not go and leave you in distress and danger," he answered, in a voice low, but full of determination.

"Oh, madman, why will you stay? Your presence here is far more dangerous than any thing that can befall me. Go, go, go! If you will not go for your own sake, in the name of the Virgin Mary, go for mine."

"If my presence increases your misery and danger, I will go—"

"It does—it does," she interrupted.

"But this is very mysterious and trying; can you not—"

"No, no, no! in the name of all the holy saints ask nothing of me; do not attempt to delve into the depths of this terrible mystery, but go—go at once." The girl was weeping and sobbing as if her heart would break, and Allen, realizing that his presence added to her distress, sprang over the wall and went into the wood near the garden.

For a long time he lingered about the mysterious old stone house. He climbed a tree, and watched it until the moon rose. But a few moments after that first blood-curdling shriek had burst upon the air the mansion became dark and silent as the tomb. Not a sound was heard after Allen had leaped the wall and quitted the grounds.

When the moon rose, there was an air of quiet serenity about the old house that gave it the appearance of a peaceful home.

Flowers in the garden were nodding their perfumed heads in the evening breeze, fountains were playing merrily, the waters sparkling in the moonlight, and all signs of excitement and terror gone. In vain he looked for the beautiful girl, she was nowhere to be seen. She had doubtless retired within the walls of that gloomy old house. Allen descended from his perch in the tree top and returned to the village.

His mind was harrassed ten times more than before. The vision of that beautiful

"OH, I'M SO GLAD I FOUND YOU ALONE!"

form, perfectly radiant in her distress and tears, was constantly in his mind. Those tearful eyes seemed appealing from some deep unknown distress which he dared not fathom.

Sleep was a stranger to his eyes that night. As he tossed restlessly upon his bed, in the anguish of his soul he cried:

"Oh Bertha—Bertha—can I not—may I not come and help you in your distress."

Never until he had seen her in tears did Allen understand his real feelings toward this strange, mysterious girl. *He loved her.* True, she was surrounded by a mystery black as midnight; she might, for aught he knew, have brought her misery upon herself, but he loved her still, although he knew her not. That being from whom the villagers shrank as though she was polution itself was the dearest object on earth to him, and he was willing to lay down his life for her.

Night passed, and when morning came he was astonished at his haggard face as it was revealed to him by the mirror. His hair was not whitened, but his face was so changed that he hardly knew himself.

His landlady inquired after his health, and advised her favorite remedy for biliousness. Allen thanked her, and assured her that he would get along without any medicine, and after a light breakfast went to the office. His mind was constantly harrowed up with thoughts of the sights and sounds of the night before. Again and again did he try to throw the subject from his mind, but, like Banquo's ghost, it would not down. He asked himself again and again for an explanation of the mystery, but his reasoning faculties were incapable of suggesting any.

"She is pure and good, be that strange mystery which clouds her life whatever it may," said Allen.

He was sitting at his desk trying hard to bring sufficient will-power to his command to concentrate his mind on the business before him, when the door of his sanctum softly opened, and Miss Hopkins, with a profusion of smiles and bows, entered.

"Oh, I'm so glad I found you alone," said Miss Hopkins, in her most pleasant manner, as she seated herself in a chair at his side. "I've just got the first installment of my story ready for the press, and I know you will be delighted with it. I was astonished myself at the story, and laughed and cried in turns at the funny and pathetic parts."

Disagreeable as it was under ordinary circumstances to be bored by this crude authoress, Allen almost welcomed her on this occasion, for the torture of her crude manuscript might direct his mind from a subject that had become exceedingly painful.

"Do you think you have a real remarkable novel, Miss Hopkins?" he asked.

"I know it, I know it! Just let me read a few pages to you."

Somehow, amateurs patronizing country newspapers always insist on reading their own productions to the editor. Like the first-born infant, they are too delicate to entrust to other than parental hands. Miss Hopkins began:

"'THE MYSTERY OF THE ROCK HOUSE ON THE HILL;

OR,

THE GHOST'S LAST WALK ON THE BLUFF.

A Story of Life and Death, Love and Supernatural.'"

"You see, I am something like Hawthorne, delving into the supernatural," said Miss Hopkins, with a smile which displayed her false teeth.

"So I observe; please proceed," said the editor, trying very hard to be interested.

"'It was a dismally dark night. The winds sighed a mournful requiem through the tree tops, and it was at that bewitching hour when graveyards yawn and ghosts stalk forth—' The reader paused to mark the effect on her hearer. He sat unmoved by the startling beginning, and she asked him how he liked it. Very well, he thought, and said "go on." She went on. It was a crude story, full of improbable incidents, and gush ng over with tear-stained love scenes. The heroine was such a tender-hearted creature, and had such a tendency to burst into tears, that the reader soon became disgusted with such imbecility, and was in constant dread of another explosion. The funny man was a strained character at best. He was constantly at his wit's end to be witty. In fact, the story was flat and insipid, and while the editor knew he could not use it, he had a great delicacy in expressing his real opinion of it.

"What do you think of it, Mr. Gray?" she finally asked.

Allen was at a critical point. There sat the authoress before him, holding the dearly beloved creature of her imagination in her hand. He would as soon think of telling a doting mother that her child was ugly as to express his real opinion of this story to Miss Hopkins. She had influential friends, persons of great depth and acumen, who had long since discovered a wonderful embryotic genius in Miss Leethy. To reject her story was to insult their intelligence and influence, while to publish it was to make himself the butt of ridicule by all thinking people. It would require skillful management to steer clear of his many complications, but Allen was equal to the emergency.

"We couldn't publish a serial story in the *Western Republic* now, Miss Hopkins," he said. "Wouldn't it be better to send it to Harper's?"

The reader may ask what harm the Harper's had done him that he should wish to inflict this punishment on them. But we must remember that Allen was only a human being in a great strait. Drowning men will catch at straws, and Allen, like all other men, was anxious to shift the load he bore upon the shoulders of some one else.

Moving uneasily in her seat, Miss Hopkins replied:

"I don't think it worth while to send this to the Harper's, Mr. Gray, they are too old fogyish to even discover true genius, you know. Like all the established publishers, they have got to going in lines and ruts, which new genius struggles to break away from. One can't do it with those publishers. None of the large magazines ever develop any thing; they are simply able to buy the jewels which some poor miner has dug up. All of our successful authors make their start on obscure publications."

"I believe you are mistaken, Miss Hopkins. Harper's would read your manuscript and decide fairly upon it."

"I am sure they would not," she persisted. "If they don't find this out of their rut, they have some special favorite whose manuscript is just ahead of mine, and they'll send it back with a printed apology that its rejection is not necessarily a lack of literary merit, but because they have something like it on hand. Those New York publishers are not in sympathy with new authors."

Miss Hopkins was a woman of literary experience, and was not to be induced to give Harper's the infinite pleasure of rejecting her manuscript.

"I am sorry; but I—I really have not space for your story at present, Miss Hopkins," said Allen. Being able to put but one interpretation on his refusal, she asked:

"Are you going to commence one of Mr. Barnes' stories?"

"No, we can not possibly use a serial at present," he answered.

"Why?"

"Because our people think that in order to build up this town all space possible should be devoted to it. Besides, the fall election is coming on, and the canvass will necessarily demand a great deal of space."

Miss Hopkins looked very much disappointed, but after a few moments she said:

"Can you use a poem occasionally?"

"I think I can."

This only partially repaired her disappointment. She declared the people of Turley's Point must be very ignorant to refuse such a novel as "The Mystery of the Rock House on the Hill," and bewailed the fate of struggling genius, held down by the iron hand of prejudice.

She took her manuscript and left the office with a look of disappointment and a heavy heart. We console ourselves that Miss Hopkins is not the only author who has met with disappointments.

Her visit had temporarily led Allen Gray's mind from the subject which had become so painful, but when she was gone it returned with double force, and all his efforts to forget Bertha, by plunging into business, were unavailing. That beautiful being who had grown so dear to his heart was always present.

"Oh, Bertha, Bertha! will this crushing weight never be removed?" he asked himself.

His reveries were interrupted by the abrupt opening of his sanctum door. Mr. Tom Simmons, with face inflamed with anger, boldly entered.

"See here!" he cried, with the air of an enraged master, "what's this I hear?"

Allen told him that he had no idea what he had heard.

"I hear yer goin' to play me foul?"

"What do you mean by playing foul?" Allen asked.

"You're goin' back on me."

"In what way?"

"You ain't agoin' to support me."

"Who told you I was not?"

"I heer'd it. It's the gineral rumor."

"General rumor is false, then," was the firm answer.

"I want it understood, Mr. Allen Gray," roared the enraged Simmons, bringing his fist down with emphasis on the desk, "that if you go back on me—don't support me as ye promised ye would, I'll fling every thing I kin in your way. I made ye what ye ar'," he hissed through his teeth. "Yes, sir, I tuk you from nuthin'—lifted ye right up out o' the dirt, and jist as I git somethin' made out o' ye, by the Lord ye 're gom' back on me. I won't stand it. Why, if it hadn't a been for me what would you been?—nuthin' —"

It is not pleasant to be reminded that we are under obligations to some person for our existence and prosperity. Allen Gray was so ungenerous as to become offended. He leaped to his feet, his eyes flashing fire, and seizing Mr. Simmons by the throat, had the presumption to deny owing any of his present wonderful prosperity to him, and was so ungrateful as to threaten to kick his benefactor out of the office if he did not become more civil.

"I said I would give you my support," he concluded, "and so I will when the proper time comes, unless you exasperate me into breaking my promise; but I am determined not to be driven into making a fool of myself."

"Why don't ye show yer hand, then, ef yer far me?" asked the impatient Simmons.

"It's not time to show my hand yet, it's entirely too early, and you are making a donkey of yourself by insisting on it."

"Well," growled Simmons, pulling on his soft felt hat, preparatory to going, "when the time comes you've got to show yer hand."

CHAPTER VIII.

SOMETHING DEMONIACAL.

"How d'you do to-day, Mr. Gray?" asked Toney Barnes, entering the editor's sanctum a few days after the events in the last chapter.

"Rather tired; be seated," Allen answered, casting a suspicious look at a ponderous roll under Toney's arm.

"I thought I would bring you a story," he said, with a triumphant smile. "I heard you was going to use one of Miss Hopkins' novels, so I thought I'd bring you some thing worth publishing, if you must have a serial."

Allen assured him that he was in no need of any thing of the kind, and had never for a moment entertained a thought of publishing Miss Hopkins' story.

"Not agoin' to publish it?" cried the amazed Toney; "why, it's all over the town and country, too, that you intend runnin' her novel as a serial in the *Western Republic.*"

"It is a mistake."

"I thought so. Nothin' she writes is fit to be in print," said Toney, somewhat acrimoniously. "Says she used to contribute to Harper, but I guess 'twas to their waste basket."

"The number of waste basket contributors is much greater than those whose papers are published."

"Yes, I suppose so; but no one likes to write for the editor's waste basket; it don't usually pay," returned Toney. "But let me read you a few chapters of 'The Bloody Knife, or the Wild Witch of the Santee Border.'"

"It would not be worth while, Toney, for all our space is engaged. Every inch that can be spared from news will be devoted to advertisements."

"Who wants to read advertisements?" said Toney, with a look of disgust.

"They are invaluable to a country newspaper. They bring in considerable money, and without them we could hardly exist."

"I suppose it's money and not talent you want," sarcastically returned the author.

Allen smiled, and then in a very calm manner proceeded to explain that this is a very practical world, and one could not conduct business without doing so on business principles. His story might be very good, and just what some other publisher wanted, who was willing to pay a good price for it, but it was valueless to him.

"A dealer in dry-goods wants to buy dry-goods, and can not be induced to purchase potatoes, no matter how good the quality or how cheap they may be offered him. No matter how good your serial may be, I can not use it."

Toney's disappointment was considerably alleviated by the knowledge that Miss Hopkins' story had been rejected also. After the political campaign was over, the editor thought he might possibly be able to use a serial, and if he found himself in such a position, would be pleased to look at Toney's manuscript.

Gathering up that ponderous roll, the disappointed author left the office with a sigh. He was not the first, nor will he be the last, author to heave sighs of disappointment. Oh, ye hard-hearted publishers, what a dark account will yours be, when all the sighs and tears of disappointed authors are arrayed against you on that final day!

A day or two later, while Allen was struggling between an article for the upbuilding of Turley's Point and the mystery of the great stone house on the hill, he heard a heavy step at his side and, looking up, saw Mr. Strong.

"I'm not agwine to stand it," cried Strong, angrily.

As mildly as he could, the country editor asked for an explanation.

"Yer playin' me foul."

"You are laboring under a grave mistake," Allen returned, making a great effort to keep his temper.

"No, I'm not; fur I know ye ar'. Didn't ye promise me f'ar an' squar' ye'd support me fur sheriff?"

"Yes."

"An' yer gwine t' go back on me?"

"No, I'm not; unless you provoke me into breaking my promise, you will receive the support of the *Western Republic.*"

"But they've got the yarn 'gwine all over the country that yer pledged to Tom Simmons."

"For sheriff, I am pledged to no one but yourself, Mr. Strong, and at the proper time you shall receive my hearty support," said Allen, rising to his feet, his face flushed with excitement. "Now, pay no attention to the stories you hear, and keep your intentions to yourself, until the time has come for you to make your announcement."

"I understand. Well, of yer gwine to stand true to me, it's all right, but of ye do go back on me, I'm agwine to knock the props right out from under ye, an' let ye fall hard enough to break yer own neck; now we understand one another, don't we?"

"I think we do."

"Very well, good-day."

"Good morning, sir."

Although pledges had been renewed, and the ambitious candidate for sheriff had been reassured, it was evident that he was not fully satisfied. Both himself and Tom Simmons were suspicious; unconsciously judging all men by their own standard, they were suspicious of every body. Each feared that some powerful influence, that great unknown pressure which politicians early come to dread, would be brought to bear upon the editor to alienate him.

They watched each other with hawk-like eyes, and one never went to the printing office that the other did not notice him, and at once surmise that he had come to buy off the editor. Each had a vague belief that the other was to be an opponent for the office to which he himself aspired. That they should be candidates for different offices never entered into the mind of either.

Allen Gray was not one to give up a mystery unsolved. Having fallen in love with the young lady at the mysterious house, he was fully determined on a solution to the mystery which seemed clouding her life and crushing all her hopes. Notwithstanding she had urged him for his sake and her own to keep away from the stone mansion, on the evening after his interview with Mr. Strong he found himself on his way toward the house on the hill. It was dusk before he started, and the moon, which had grown so old it would not shine until late in the night, would give him no aid.

The front part of the house was dark and silent as if it had been deserted for years. This time he ventured up to the great stone steps and gazed through the iron wicket gate. He could see the broad path leading up to the house, which was composed of flat, dressed stones. A fountain was on each side of the path, but both were idle now.

No sign of a living creature could be discovered, nor from any of those great, deep windows was there to be seen a single ray of light.

"I will go completely around the house," thought Allen, "and more critically examine it than I have ever done."

On the east, west and north sides of the house the walls were of oak boards standing upright. On his tour around the grounds Allen frequently halted to peep through a crack in the wall, but could make no new discovery.

Slight clouds almost completely obscuring the starlight, the night had already grown very dark. In places where the tall oaks grew close to the wall it had already become so dark that Allen was forced to grope his way.

At last he reached the rear gate, which was made of thick oak boards, so close together as to be more of a door than a gate. He tried it and found it locked. There was a crack at one side of it, through which he had a good view of the garden and rear of the building. It looked like some gigantic fortress rising up in the darkness before him, with only a solitary light dimly shining from one of the windows.

(TO BE CONTINUED.)

The Knights of Labor in New Jersey are throwing the weight of their organization in favor of the adoption of the Australian system of voting.

Beef cattle returned for taxation in Kansas, Texas and the territories west of these States have increased in six years past from 5,977,005 to 13,762,398.

The old battlefield of Antietam has just been purchased by R. D. Fisher of Jefferson county, W. V. It has long been filled by the previous owner.

Colonel James A. Woods, who always claimed to have escaped the massacre of the Alamo in Texas, died at Bloomfield, Ky., on Wednesday of last week, aged seventy-four years.

HE GOT $10,000.

W. H. Nagle of Boston Was Fortunate in His Recent Investment.

At the January drawing of the Louisiana State Lottery Co., it was found that the ticket numbered 40,789 had drawn $100,000. One-tenth of this ticket was held by a Boston gentleman, W. H. Nagle, of Farrell, Nagle & Power, Hathaway building, 620 Atlantic ave., wholesale dealers in wool.

Mr. Nagle lives in a large brown wooden dwelling on the corner of Main and Ellery streets, Cambridge. A *Record* reporter called on him last evening to learn if the report as to his good luck had a good foundation, and was assured that it had. Mr. Nagle sent $1 about two months ago to M. A. Dauphin, New Orleans, La., and a short time ago he received by express a check from that gentleman for $10,000, on which he got the money.

Mr. Nagle had not decided what disposition he should make of his suddenly gained good fortune. He said that he has so many calls for money that he can use it all readily. He might put it in stocks, bonds, real estate, or in the bank.

His first knowledge that he had drawn a prize was from reading in the papers the simple statement: "The following numbers were received from M. A. Dauphin to-day: 40,789 (Boston) $100,000," etc.

Mr. Nagle is a man of about 30 years of age. His home has in its furnishings evidence of luxurious tastes, which a considerable income has enabled him to gratify to a large degree. Paintings and engravings adorn the walls, heavy portieres separate the rooms, and in the halls are many pieces of antique furniture.—*Boston (Mass.) Record*, Feb. 11.

FALSE NEWS.

To Our Agents and Customers Everywhere.

The San Francisco *Bulletin* of February 6, 1889, published the following item, which is absolutely false and without foundation:

"BRIDGEPORT, Conn., February 6.—The New Home Sewing Machine Company will go out of business. It is not able to continue at a profit owing to strong competition."

The San Francisco *Morning Call* of February 7, 1889, published the following:

"GOING OUT OF BUSINESS."

"BRIDGEPORT Conn., February 6.—The New Home Sewing Machine Company will go out of business. It is not able to continue at a profit owing to strong competition. Several hundred hands will be thrown out of employment."

This, it is useless to say, is also false, being substantially the same as the other. "The New Home Sewing Machine Company" is solid financially. It has the finest equipped and best appointed sewing machine factory in the United States, located at Orange, Mass., where upward of 500 machines per day are turned out. The Company has sold over 1,000,000 machines, and is selling 150,000 machines per year on the second million. This should be conclusive evidence that it is not going to retire from a business in which a large capital is profitably invested. In other words, the Popular New Home is here to stay, as "it ranks high above all competitors and is the leader of the age in practical improvements." The publications quoted above being "false news" constitutes a libel, and parties receiving this card will confer a favor by mailing us copies of any paper in which they may have seen the same printed. Being published to the world they will, doubtless, injure our business, and we warn all people not to credit any publication or verbal assertion of such a nature regarding our company, but when information is required, or a first-class machine wanted, please interview the undersigned.

Most truly,

CHAS. E. NAYLOR,

General Manager Pacific Department the New Home Sewing Machine Company.

Main office, 725 Market street, History Building, San Francisco.

Company Branch Offices—46 Morrison street, Portland, Or.; 18 South Second street, San Jose, Cal.; 50 North Spring street, Los Angeles, Cal.

Local agencies everywhere.

A notice of the above publications having been wired to our factory, the following telegram was received in reply:

"ORANGE, Mass., February 9, 1889.

"Charles E. Naylor, Manager New Home Sewing Machine Company, San Francisco, Cal.: Mistake. The New Home Sewing Machine Company not embarrassed. They are solid financially as the granite hills of New England. Business good and the machine the most popular.

JOHN W. WHEELER,

Vice-President, Secretary and Treasurer."

Europe is as peaceful as the mining camp where every man is a dead shot.

A TERRIBLE MISFORTUNE.

It is a calamity of the direst kind to feel that one's physical energies are failing in the prime of life—to feel more nerveless, more dispirited, weaker every day. Yet this is the unhappy lot of hundreds who surround us. A source of renewed strength which science approves, in behalf of which multitudes of the debilitated have and are every day testifying, and which, in countless instances, has built up constitutions sapped by weakness and infirmity and long unbenefitted by other means, surely commends itself to all who need a tonic. Hostetter's Stomach Bitters is such a medicine—pure, botanic, soothing to the nerves, promotive of digestion and a fertilizer of the blood. Dyspepsia and nervousness—the first a cause, the second a consequence of lack of stamina—depart when a course of the Bitters is tried. All forms of malarial disease, rheumatism, kidney and bladder trouble, constipation and biliousness are annihilated by this standard family medicine.

"Ma, what is a linguist?" asked her little boy, looking up from his reading. "A native of Lynn, Mass., Johnny."

In 1850 "*Brown's Bronchial Troches*" were introduced, and their success in relieving Coughs and Bronchial Troubles has been unparalleled.

THE BANCROFT COMPANY

Sell the best Pianos and Organs in the market, such as the Miller, Behning, Stultz & Bauer, Kurtzmann and Starr, also Reed Pipe Organs, Wilcox and White, Ferrand and Votey. Sole Agents for the Wonderful Pneumatic Organs, two organs in one. Anyone can play it. Send for circulars and catalogues. THE BANCROFT COMPANY, 721 Market Street, San Francisco.

CONSUMPTION SURELY CURED.

TO THE EDITOR:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption if they will send me their express and postoffice address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl st., New York.

A COMMON-SENSE REMEDY.

In the matter of curatives what you want is something that will do its work while you continue to do yours—a remedy that will give you no inconvenience nor interfere with your business. Such a remedy is ALLCOCK'S POROUS PLASTERS. These plasters are purely vegetable and absolutely harmless. They require no change of diet and are not affected by wet or cold. Their action does not interfere with labor or business; you can toil and yet be cured while hard at work. They are so pure that the youngest, the oldest, the most delicate person of either sex can use them with great benefit.

Bank tombstones are now the style. But this is a cave where, in order to be in the fashion, you have to be out of the world.

DR. ISAAC THOMPSON'S CELEBRATED EYE-WATER.

This article is a carefully prepared physician's prescription, and has been in constant use for nearly a century. There are few diseases to which mankind are subject more distressing than sore eyes, and none, perhaps, for which more remedies have been tried without success. For all external inflammation of the eyes it is an infallible remedy. If the directions are followed it will never fail. We particularly invite the attention of physicians to its merits. For sale by all druggists. JOHN L. THOMPSON, SONS & CO., TROY, N. Y. Established 1797.

I CURE FITS!

I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a free bottle of my infallible remedy. Give Express and Post Office.

A DELIGHTED YOUNG WOMAN.

Look at my face and my hands—not a pimple,
Such as you saw there some time ago.
See my fresh cheeks, and I'm getting a dimple,
I don't look at all like I used to, I know.

My face was all blotches—complexion like tallow;
No wonder they thought me and called me a fright;
No one need have pimples and skin gray and sallow,
If she'll take what I took, ev'ry morn, noon, and night.

I asked the delighted young woman what she referred to, and she answered, Dr. Pierce's Golden Medical Discovery. It *is* the best beautifier in the world, because it purifies and enriches the blood, and pure rich blood gives good health, and good health—beauty.

Dr. Pierce's Golden Medical Discovery cures all humors from a common Blotch, or Eruption, to the worst Scrofula. Salt-rheum, Scaly or Rough Skin, Tetter, Eczema, Erysipelas, in short, all diseases caused by bad blood are conquered by this powerful, purifying, and invigorating medicine.

Copyrighted, 1888, by WORLD'S DISPENSARY MEDICAL ASSOCIATION, Proprietors.

CATARRH IN THE HEAD, no matter how bad or of how long standing, is permanently cured by **DR. SAGE'S CATARRH REMEDY.** 50 cents, by druggists.

Spring Disorders

Shattered nerves, tired brain, impure blood, debilitated system, all are the natural outcome in the Spring. A medicine must be used, and nothing equals Paine's Celery Compound. We let others praise us—you cannot help believing a disinterested party.

Brigadier-General W. L. Greenleaf, Burlington, Vt., writes: "I have used Paine's Celery Compound on several occasions, and always with benefit. Last spring, being very much run down and debilitated, I commenced taking it. Two bottles made me feel like a new man. As a general tonic and spring medicine I do not know of its equal."

"I have used two bottles of your Paine's Celery Compound, and it has given entire satisfaction as an appetizer and blood purifier." T. L. BERNER, Watertown, Dakota.

Paine's Celery Compound

is prescribed by physicians, recommended by druggists, endorsed by ministers, praised by users, and guaranteed by the manufacturers, as a spring medicine which will do all that is claimed for it. Use it this spring, and see how quickly it tones you up.

Purifies the Blood.

Full accounts of wonderful cures made by Paine's Celery Compound after other medicines and the best physicians had failed, sent free. There's nothing like it.

$1.00. Six for $5.00. Druggists.

THE EDITOR'S MAXIMS.

Murat Halstead Discusses the Subject of Newspaper Making.

Editor Murat Halstead, of Cincinnati, delivered an address on "The Maxims, Markets and Mission of the Press" before the Wisconsin Press association recently. In the course of it he said:

"Who can tell the young man how to grasp the magic clew of the globe that spins with us? There is no turnpike or railroad that leads into journalism. There are no vacancies for didactic amateurs. Nobody is wanted. And yet we are always looking out for somebody, and once in a while he comes. He does not ask for a place, but takes that which is his. Do not say to the young man there are no possibilities. There certainly are more than ever before. Young man, if you want to get into journalism, break in. Don't ask how. It is the finding of it out that will educate you to do the essential thing. The young man must enter the newspaper office by main strength and awkwardness and make a place for himself.

I shall recite and annonate some of the maxims declared by an editor. Said he:

1. "Get the news, get all the news, and nothing but the news." Who ever yet knew just what "all the news" was? It is telling too much to say we must get "all the news and nothing but the news." No sheet could be sufficient to contain it. Only the wide world could hold it in all that darkens or shines between the continents and the oceans and the skies. It ranges from a dog fight to an earthquake, from the enkindling fancy of dawning hope to the achievement of inspiration.

2. "Copy nothing from another periodical without perfect credit." Sometimes it is the highest flattery not to give credit, and we have known information credited to a newspaper that the journal itself would gladly have discredited. Fortunately this maxim does not go so far as to declare that you must not publish intelligence without giving "perfect" authority for it. That would demand the infallibility that Mr. Dana is said to have discussed with the pope, with reference to their comparative possession of the uncommon attribute.

3. "Never print an interview without the knowledge and consent of the party interviewed." This is to be construed conventionally, and it is not certain that it would always be popular with public men, who find the interview convenient in making informal appearances, often more important than official proclamations. The best interviewing, that which is most pleasing to him who is interviewed and valuable to the newspapers, and that gives the greatest charm to the art of the interviewer, is the apparently innocent report of the seemingly unintentional conversation of the subtle gentleman who is giving the information.

4. "Never print a paid advertisement as news matter. Let every advertisement appear as an advertisement; no sailing under false colors." Once upon a time I sacrificed many dollars in an endeavor to establish that great principle and have receded from it, yielding to the material manifestation of general judgment. If one may be permitted to speak of local experience, the question of never printing a paid advertisement as news matter has not been so important as the printing of advertisements that are not paid. Amend this maxim by saying: Don't undertake too much; or, if we may put it in the most homely way, don't bite off more than you can chew—without facial distortion.

5. "Never attack the weak or defenseless, either by argument, by invective or by ridicule, unless there is some absolute public necessity for so doing." There can never be an absolute public necessity for attacking the weak or the defenseless. Help them, defend them always!

Perhaps it is too early to compare the influence which the elder Bennett, the newsman, exerted with that of Horace Greeley, who dealt rather in ideas than in reports. It would be easy to describe the distinction of the two, but difficult to decide which was the more influential upon the press or the country. It might be said of either, in Disraeli's words, unveiling the statue of Lord Derby at Westminster: "I have unveiled the statue of a man who for forty years largely influenced the public opinion of his country."

If we have a mission greater than another it is the broad cultivation of the popular character.—New York World.

Curious if True.

Mr. A. D. King, a well known lawyer of Orillia, lost his life on the Grand Trunk railway. He had been away on business, and on returning got off the train while it was in motion. Instead of getting off at the station side he took the wrong side of the train, and had hardly touched the ground when he slipped and fell so that his two legs were run over by the Pullman car. He died in twenty-three hours. The accident took place at 2 o'clock in the morning, and at daylight a brother of the dying man drove a few miles out from the station to tell his father of the sad business. To his surprise he found his father up and dressed awaiting for him. "Where's Daniel?" eagerly asked the old gentleman. "I saw him about 2 o'clock or a little after. He came to my window and rapped at it. I saw him three times and spoke to him!" The grief of the father on learning of the sad affair was very great.

—Prince Bismarck, though a capital French scholar himself, detests every other German who parades the same accomplishment.

—One of the best lawyers in Virginia says he would on no account leave his children any considerable amount of money, and he gives away not less than $4,000 a year.

—The will of Edson, the late millionaire who was one of the founders of Oakland, Cal., is one of the briefest on record. It disposes of $3,000,000 in less than one hundred words.

EXHAUSTION OF PETROLEUM.

What Scientific Men Have to Say on the Subject—Unmistakable Signs.

It can hardly be doubted, I fear, that the supply both of oil and gas has now been so largely drawn upon that within less than a score of years scarcely any will be left which can be brought at reasonable cost into the market. The boundaries and extent of the oil regions have been determined. All the sands in which oil will ever be found in such quantities as to be worth working are known, and have been drilled through in various places. It is scarcely possible that any new fields will be discovered which will be comparable either in extent or productiveness with those now known. So far back as January, 1883, Professor Lesley pointed out that no petroleum is now being produced in the Devonian rocks, either by the process akin to distillation or otherwise. What has been stored up in the past, a process which probably lasted for millions of years, may be got out. But when these reservoirs are exhausted there will be an end of the petroleum supply. "The discovery of a few more pools of two or three millions of barrels each can make little difference." Mr. Carll, whose opinion on the geology of the oil bearing districts may be regarded as decisive, has come to a similar conclusion. "There are not at present," he pointed out quite recently, "any reasonable grounds for expecting the discovery of new fields which will add to the declining products of the old, so as to enable the output to keep pace with the shipments or consumption."

The stored petroleum in this region has then been very nearly exhausted. In less than a generation a small part of the population of this continent alone has used up nearly all the valuable stores of energy which had been accumulated during millions of years of the geologic past.

More recent inquiries confirm the conclusions of Professor Lesley and Mr. Carll. The signs of exhaustion in the oil producing regions can now be clearly recognized. During the last four years there has been a steady diminution in the output, accompanied by an increase in the price per barrel, which nevertheless does not even maintain the nominal annual value of the supply. Mr. Wrigley announced in 1882 that 154,000,000 barrels of oil had already been raised up to the beginning of that year, and expressed the opinion that not more than 96,000,000 barrels remained to be raised. In this last estimate he was undoubtedly mistaken, for up to the beginning of 1885 no fewer than 261,000,000 barrels had been raised, and in the year 1885 as many as 21,042,041 barrels (nearly 3,000,000 fewer than 1884) were obtained. But although the estimate in 1882 of the quantity of oil still remaining fell far short of the truth, and though we may admit as possible that even now much more oil remains to be put out than the most experienced geologists suppose, the signs of approaching exhaustion are yearly becoming more unmistakable.

The expense of bringing the oil to the surface grows greater year by year, and threatens soon to become so great that the profit of working the oil stores will be evanescent. So soon as that state of things is approached, we may be sure that the oil men's occupation in Pennsylvania and western New York will be gone. It has been stated that the Japanese, unwilling to let the least fraction of the earth's interior stores be lost, have been known to excavate a vertical shaft to a depth of 600 feet, in order to raise a few gallons of oil per day. But in America, when the oil mines are so near exhaustion as this, they will be abandoned; nay, they will be abandoned long before they approach such a condition. With the failure of the oil supply, all the collateral branches of industry associated with it will fall too.—Knowledge.

An Old Indian Legend.

The great contest between the Creek and Cherokee Indians, which was finally settled by the grand council of the famous "Seven Stumps," in old Tallapoosa, was over the possession of this immediate section, which was then known to be rich in gold and gave to the river its name, "Tallapoosa," meaning "yellow sand." It is said that a famous "medicine man" of the Cherokees discovered a wonderfully rich mine within four miles of the "Seven Stumps," and after the territory was decided by the council to belong to the Creeks, he persistently refused to make known its exact location. Old men who were here when the Indians were gathered up and carried away say that the older Indians vaguely hinted at wealth beneath the earth's surface, but carefully kept the secret of its location—the "medicine men," or prophets, claiming to have it from the Great Spirit that their descendants would finally return to possess this land again, and the earth would keep her great treasure house locked until their return.—Tallapoosa (Ga.) Journal.

The Derby's Itinerant Photographer.

The wandering photographer is also a feature of the Derby. All of those happy lunching parties welcome the photographer. Those who are on the coaches are generally people to whom the Derby is a novelty, and as a necessary consequence they are delighted to take home with them some permanent souvenir of their new experience. The photographer, therefore, does a thriving business. The style of picture taken by him is what is called with us tin type, which is taken in any one of the galleries for 15 or 25 cents. At the Derby each picture costs half a crown, or about 62 1-12 cents of our money.—T. C. Crawford in New York World.

Fashion Notes from Far Islands.

The island of Johanna, Comoro Islands, has some very peculiar customs. The natives are jet black, but neat and clean. Girls after marriage are not allowed out on the streets at all and can see no one but their husbands. Rich men are allowed four wives, poor men one. When a poor man gets poorer he can sell a half share in his wife for so much money, formulated by law. A native belle before her marriage makes a fine display on the fashionable streets of Johanna in this rig: A red calico Mother Hubbard gown, printed with a pattern of banana leaves, reaching to her knees; no shoes nor stockings, and for headgear a wide rimmed, blue china teacup, worn with the handle on one side for convenience in taking off.—Boston Journal.

The Fatal Opal.

It is a fact that instances of ill luck, misfortune and disaster have been known to follow closely upon the acquisition of the opal; but would not the results have been the same either in the absence or possession of the gems? A lady of wealth and prosperity purchased a full set of opals and diamonds. In five years she has met with more misfortune and reverses than is usually crowded into a dozen life times. Divorce, loss of fortune, beauty, social position was her lot and to the baneful influence of the wonderful opal she attributes her downfall. Another lady traces her troubles to the fact of owning a beautiful opal ring which she keeps because it is an heir loom, but no power of persuasion can make her wear it, and her children have been warned to shun it as they would some evil and poisonous thing. It was given her by her brother on his deathbed. The first day she wore it the water pipes burst and caused a damage of several thousand dollars to the beautiful decorated and frescoed ceilings. She put it away, and several years later her daughter put it on. A gentleman friend who admired the gem asked permission to wear it. What followed is rather remarkable. He had been very prosperous, having made a fortune with great rapidity. With the possession of the ring success deserted his efforts. Loss after loss followed one another in rapid succession and he returned the bauble a ruined man, fully assured that the baleful gleam of that mysterious stone of the ancients had exerted its influence against him.—San Francisco Chronicle.

A Joke Supply House.

"Jokes to Let" is a sign that may be read on some office door before long, if a young man who thinks that he has got an inspiration carries out his threat. He revealed his scheme one night recently to a person whom he happened to meet. Said he: "I have got an idea that is going to make me a fortune, and a big one at that. I am going to start a joke shop and a funny story factory. You see, I am something of a hand at making jokes my self, and I can hire two or three others to get up funny stories for me. Then I intend to advertise for patrons, and I'll get them easy enough. There are plenty of young men who like to appear clever, when they really are no more clever than a cow. When they go out in company, or with a party of their fellows, they want to say something smart or tell a story that will delight the girls. Now to remedy the inability of most young men to do this is a long felt want. That is just what I propose to fill. I will simply contract to allow them to use the jokes or stories once, twice or three times, or as often as they care to pay for. In fact, I will rent them my jokes. If they violate my confidence, I will expose them; that is, if I can find them out. I tell you, my boy, it is a great scheme."—San Francisco Argonaut.

Perilous Balloon Ascent.

Great excitement was occasioned at Snaresbrook, Essex, by an accident to "Professor" Higgins, who made an ascent from grounds adjoining the Eagle public house, intending to descend by a parachute, after the manner of Baldwin. The ascent was made in the presence of a large concourse of spectators. The balloon used was of 4,000 cubic feet capacity.

There was no car, and the parachute was attached to the side of the balloon in the ordinary way, so that Higgins might at the proper moment leap from the bar into the air. He rapidly shot up to a height of 4,000 feet, and was watched with almost breathless anxiety by the people in the grounds, and when the parachute was seen to fall away from the balloon and to leave Higgins suspended above something in the nature of a panic seized upon the spectators, especially the female portion. Speedily passing out of view the balloon, as it was afterward proved, descended on a piece of land near Enfield Lock, a distance of about seven miles, at 3:58 o'clock, and the welcome intelligence was received at Snaresbrook that Higgins had escaped a fate which all feared was inevitable and had sustained no injury beyond a severely sprained ankle.—London Telegraph.

About Decades.

Our esteemed contempory, The New York Sun, which is proud of its uncommon accuracy in the use of language, makes a common mistake when it refers to the present year as "the closing year of the ninth decade."

The year 1890, not the year 1889, will be the closing year of the ninth decade of the Nineteenth century.

The year 1 was the first year of the Christian era, and the first decade was not completed until the close of the tenth year. The year 1889 is the 1889th year of the Christian era, and the present year will not be completed till the close of the 1890th year; that is, the 31st day of December, 1890. The tenth decade will begin on the 1st day of January, 1891, and end on the 31st of December, 1900.

It is a very common error to suppose that the present century will end with the close of the year 1899. It will end only with the last day of the last month of the year 1900, and the Twentieth century will not begin until January 1, 1901.

It is just as well to be accurate in keeping the account of our transactions with Father Time.—Boston Globe.

Didn't Blame Esau.

Increasing age does sometimes cause us to appreciate more fully the temptations of others.

Little Madeline was eating broiled partridge for the first time, and great was her delight in its savor.

"It's nicer than anything I ever tasted," quoth she, "and I don't blame Esau a bit."

"What has Esau to do with it?" queried her mother.

"Why, you know, mamma," said the little one, in grave surprise at such ignorance, "he sold his birthright for a mess of partridge!"—Youth's Companion.

OUR FAIR CANADIAN COUSINS.

Bob Burdette on a Toboggan—Toronto in Midwinter—Exciting Sport.

You have never seen Canada unless you have seen her with her winter clothes on. She is charming in the time of the roses, but so is the desert at that time. But when the Dominion puts on a toboggan suit and muffles herself in furs and astrakan, and stands up in a snow drift that reaches from the great lakes to the north pole and back again, she is just too dazzling to look at, save through smoked glasses.

You can not imagine how animated and brilliant is Toronto when she puts on her snowshoes and gets herself up on runners, and fills all the air with the chimes of the sleigh-bells. There is an endless variety in design and pattern and color of sleigh and robe and bell and plume, and the streets look like Christmas so long as the snow lasts. Even the street cars feel the infection (because a wise ordinance compels them to) and mount themselves on bobs, and with plebeian independence, jangle the loudest bells and take the best half of the street, right out of the middle as usual, and turn out for nobody and run into everything, and in every way conduct themselves like the well-ordered, broad-shouldered, sing-hey the jolly street cars that they are.

It is pleasant to tarry among people whose girls wear satin slippers when they dance and arctics when they wade through the snow. Our fair Canadian cousins have no dread of comfort. The snow has no terrors for them, they dress for the storm as sensibly as for the reception. They dress prettily. And if there is a prettier figure on the North American continent than a daughter of Canada, apareled for the ice or the toboggan slide, herself a part of the snow-drifted landscape, a picture of health and comfort that fairly softens the piercing wind into a sense of warmth, I have not seen it. She dresses in perfect harmony with the winter and landscape, she has a complexion clear as the ice of Ontario, and her warm blood shines through it rich as the flashes of the aurora, graceful and free in every movement—when you look at her you forget there is such a thing as a roller rink or an American banker in Canada.

Everybody dresses for the winter here when the winter comes, and yet it is a climate no more severe than that of York state. I was the only man in Ontario with a stiff felt hat and a cloth overcoat, and I felt all the time I was in the province as though I was a lost Arctic explorer and had eaten my fur overcoat, cap, mittens and boots, and waiting for a rescuing party to find me. Before I had time to die of starvation, however, J. Ross Robertson and the Toronto Press club found me, and carefully nursed and fed me back to life. They would have fed me more had I been a larger man with greater stowage capacity, for their hospitality is as boundless as their land, which, you know, is bounded not on the north by anything, and reaches away out into the great unknown beyond.

The toboggan is a sled with a single runner, which spreads clear across the bottom of the sled. The top of the toboggan is just like the bottom. It is somewhat thicker than a sheet of writing paper and about as long as an after-dinner speech. Its seating capacity is limited by the number of people who can get on it. The urbane and gentlemanly conductor sits aft and uses one of his lithe and willowy legs for a steering apparatus, by which he guides the toboggan some way or rudder. It is easy to slide down hill on a toboggan. In fact, after you start down, you can't do anything else. True, you could fall off. That is easily done. The flying machine is not high, so you haven't far to fall. Still, if you have to fall from a toboggan half way down the slide, or else fall down the slide, or else fall down stairs with a kitchen stove, you take the stove and the stairs every time. It isn't so exciting and it isn't so soon. The "prince" and I walked up the stairway for the purpose of sliding down the banister on a toboggan. The president of the club took his place aft, somebody said "let her go." Then we stopped and the president said, "How do you like it?" I left my breath at the top of the slide and we had to go up and get it. There it was, a great gasp four and a half inches long sticking in the air like an icicle, just where I had gasped it when we started. I took it down, stuck it into my left lung and began to breathe again with great freedom. The toboggan is to any other way of getting down hill what flying is to going to sleep. If I was in a hurry and it was down hill all the way I would rather have a toboggan than a pair of wings any day.—Burdette in Brooklyn Eagle.

A Suggestive Proposition.

Why should all the policemen be kept to watch warehouses and club drunken men on the head? Why not have a force of dandy fellows in red coats and silver buttons, to go about trying to do good? To help tottering old men and women, to direct strangers, to assist the drunken loafer, or any one who is in distress.

Let this body have station-houses, with seats and fires, and restoratives, and comforters of many sorts. Why not have such an organization as this? Who originated the idea that it must all be clubs, cells and brutality? The other would pay in the long run.—Texas Siftings.

Down in the Comstock Mine.

There is a marked contrast between the temperature at the surface and in the depths of the mines on the famous Comstock lode. While severe winter weather is prevailing outside the heat is so intense in the lower levels of the mines that the workmen, who have no clothing on but overalls and heavy brogans to protect the feet, can work only for short intervals.—Chicago Times.

Instruction for Young Diplomatists.

The Prussian government contemplates the foundation of an Oriental academy, which would be attached to the Berlin university, for the instruction of young diplomatists.—Inter Ocean.

MacMahon's Memoirs.

Marshal MacMahon is finishing his memoirs. He has sent proof of the chapters relating to the military operations of the Austro-French war of 1859 to the Archduke Albert, inspector of the Austrian army, and those relating to the war of 1870–71 to Marshals von Moltke and Blumenthal, requesting in each case to be informed whether he has stated facts accurately. The interest of the memoirs will center on two points: First, the influence political considerations had in preventing the retreat of his army on Paris after the defeats at Woerth and Forbach in 1870, and, secondly, the part which the marshal played in assisting and afterward frustrating the attempts at a monarchical restoration in 1873–4–5. The marshal, as was well known, thought the Comte de Chambord acted very foolishly. The crown was ready to his hand and he had only to make a move to grasp it. He was, however, dissuaded from it by the Comtesse de Chambord, who, having no children and hating the Orleans princes, loathed the idea of raising her husband up on high simply to make the throne secure for his cousins.—London World.

A Novelty in Beds.

Plunging about on the levee in the blackness the other night a reporter discovered a retreat, the novelty of which knocked him all in a heap. It was a lodging house, but there were no beds. The guests did not recline on the floor either, nor were they hung up on hooks, and yet they slept. The room was perhaps seventy-five feet deep by twenty wide. About three feet from the wall and extending around it was a rope fastened to posts placed at intervals. It was about five feet from the floor and was slightly slack. Underneath it were other ropes similarly stretched, the whole resembling a rope fence. With their backs to this support, and with both arms thrown over it to keep from falling, were twenty-two persons, mostly colored, but among them several wretched white men, and all were sleeping soundly. The place was dimly lighted, and the old darky proprietor sat patiently waiting for more guests to arrive. His charge for lodging, or rather to hang on the ropes all night, is but five cents.—Louisville Courier-Journal.

Good Qualities of Turpentine.

After a housekeeper fully realizes the worth of turpentine in the household she is never willing to be without a supply of it. It gives quick relief to burns; it is an excellent application for corns; it is good for rheumatism and sore throats, and it is the quickest remedy for convulsions or fits. Then it is a sure preventive against moths; by just dropping a trifle in the bottom of drawers, chests and cupboards, it will render the garments secure from injury during the summer. It will keep ants and bugs from closets and storerooms by putting a few drops in the corners and upon the shelves; it is sure destruction to bedbugs and will effectually drive them away from their haunts if thoroughly applied to the joints of the bedstead in the spring cleaning time, and injures neither furniture nor clothing. A spoonful of it added to a pail of warm water is excellent for cleaning paint. A little in the suds on washing days lightens laundry labor.—Brooklyn Eagle.

Robson in Congress.

Stuart Robson, by the way, was once in congress. Revelation of this little known fact was recently made when he was introduced to the "Father of the House," William D. Kelley, of Pennsylvania. Said the comedian in his high C voice, which pipes as naturally off the stage as upon it: "I am glad to meet you, Judge Kelley. I was myself in the Thirty-first congress." Old "Pig Iron" looked at the actor in amazement, and in his deep bass voice replied: "You were in the Thirty-first congress? Why, my dear sir, I am old enough to be your father, and my services in the house of representatives only began with the Thirty-seventh congress." Then Robson, without a smile upon his face, squeaked again: "Yes, judge, but you see you began as a member, while I was a page. However, that shall not stand between us. Once more I iterate I am glad to see you." The high apostle of protection guffawed heartily as he extended his right hand and rumbled: "So am I."—New York World.

Making Camphor.

The mode of preparing camphor for commerce as practiced by the Japanese is a species of distillation. The wood is cut up into chips and these are put into a tub fitted over a large iron pot under which a slow fire is kept. The pot is partially filled with water and the bottom of the tub is pierced with holes through which the steam from the heated water passes. The tub has a close fitting cover, and a bamboo pipe connects it with a series of other tubs. The steam passing through the chips separates the oil and camphor from them, and in the last tub the cooled extract falls upon straw which catches the camphor crystals while the oil and water escape and are held in a lower compartment. The camphor is collected and packed for market, and the oil is used for illuminating and other purposes.—Good Housekeeping.

Saving.

A stingy man never loses an opportunity of getting something for nothing, and his efforts to bring about this end are sometimes very amusing.

Old Mr. B——, who lived some years ago in a Connecticut town, was what his neighbors called "very close," but, grasping as he was, there was one thing he would not accept, even for nothing, and that was intoxicating drinks of any kind. He was strictly temperate.

One day he was asked to drink with several of his neighbors at the village store, where drinks were sold at ten cents each.

"No, thank ye," he replied; "I never drink, gentlemen; but, if it's all the same to you, I'll take a gimlet instead.—Youth's Companion.

THE ACADIANS OF LOUISIANA.

A People Who Have Been Little Changed by Time—A Simple Life.

Back from that great highway, the Mississippi, there are innumerable smaller streams, called bayous in this section, which fertilize an immense expanse of prairie in western Louisiana. It is an idyllic region; there are myriads of tropical flowers spangling the beautiful plains of Opelousas and Altakapas, whose long grasses sway and change color with every passing breeze; the bayous and little lakes gleam like silver in the sunshine, their islands marked with huge live oaks and venerable cypress trees fantastically garlanded with Spanish moss. Multitudes of brilliant birds add to the beauty of the scene; the quiet bayous are often stirred by the swift canoe of the sportsman in search of the wild fowl with which this section abounds. It is a land beloved of artist and poet; it is the country of Longfellow's "Evangeline."

Along the numerous water courses where steamboats are never seen, where railroads are unknown, the exiled Acadians are found in all their primitive simplicity, retaining almost unchanged the language, manners, customs and superstitions of the French peasants of nearly two centuries ago. These peculiar people were originally colonists from Normandy, who settled in Nova Scotia, but were driven thence, as every one knows, by the persecutions of the English. A modern historian says of them: "The Acadians were the most interesting French colonists in America, and no plea of necessity could justify the cruelty of tearing them away from their homes and consigning them to wretchedness and poverty."

Not for long, however, were they doomed to wretchedness and poverty, for in 1755 these exiles found their way to Louisiana, where they made a fortunate exchange in the sunny clime and fertile plains they peopled for the bleak land they had left behind them. A souvenir of their former home, the province of Acadie, has clung to them in their name, although they do not call themselves Acadians, but "Creoles Francais."

The Americans, and even the Creoles, have corrupted the name Acadian into "Cajun," which term these people resent strongly, yet as "Cajuns" they are known all over the state. They are, in fact, Creoles, being the descendants of French parents, born in a French colony, but they are an entirely distinct people from all other populations of Gallic descent in Louisiana.

They still retain marked characteristics of their Norman origin, as unlike the French people of more southern provinces as if they were indeed of separate race. Those Acadians who were of an upper class have long been amalgamated through intermarriage or association with other Creoles of the state; but the great body of these people have kept to themselves, and are now, as we said before, as primitive in their ideas and customs as when they first set foot in the New World, although many traits of the Norman peasantry, which they still possess, have been modified by climate and circumstances.

They have remained purely French and without Spanish admixture, as is the case with other Creoles. They are an independent, hardy, athletic race, entirely content with their own lot in life, being sufficient unto themselves and having little interest in the outside world. Their tastes are simple and nearly all their wants are supplied from their own industries. They are chiefly an agricultural and stock raising population, and for this reason the families—though each from its own large proportions is a little colony in itself—do not live very near together, but are scattered broadcast over the bosom of the prairies. It has been questioned whether these people would have retained their peculiar characteristics for such a length of time if they had clustered in larger communities.

The French patois they speak, and which they believe to be purest Parisian French, is unlike any other Creole patois in Louisiana and is wholly unmixed with negro dialect; for the Acadians were never slave owners. They have ever been a prolific race; but this circumstance does not, as in other peoples, force the young birds to leave the parent nest when old enough to seek their own livelihood. On the contrary, the Acadians are prepared to make any sacrifice in order to keep their children near them; the paternal acres are divided and subdivided into smaller farms, and every child and grandchild receives a share as soon as he has reached the age to settle down and make a home for himself.

The young people are also encouraged to marry early, that closer home ties may bind them more strongly to their native locality. Marriage is in as high esteem with them as it was with their ancestors in the days of the Roman republic, and old bachelors are as freely held up to ridicule and contempt.

Their houses are all modeled after the same plan, a substantial and comfortable, but plain cottage, built of cypress, with thick plastered walls, large or small, according to the necessities of its occupants, and with a broad porch or galerie in front. Along the course of the Bayou Teche, "where it flows through the green Opelousas," and the Bayou Tigre, many of the Acadian homes are seen, each embowered in a clustering grove of live oak or China trees. This portion of the state is generally spoken of in Louisiana as the "Teche country;" and it is a little curious to learn that the word "Teche" is a Creole corruption of Deutsch, from a German colony which once settled on its banks.—New Orleans Cor. San Francisco Chronicle.

Peter Cooper's Monument.

Talking about monuments, the one to Peter Cooper recalls the fact that the institute has been entirely rebuilt from roof to foundation, except the shell, by rebuilding parts at a time to preserve the skeleton of the former structure in the air while new flesh and blood were being effected. The fact is thought to have been a remarkable one. It cost $300,000, and with $200,000 more added to the endowment fund, represents the unheralded liberality of the Cooper family—Edward Cooper and Sarah Cooper Hewitt, the wife of the mayor.—Brooklyn Eagle.

The deer park at Mount Vernon is to be restored exactly as it was in the time of Washington.

What Hermann Saw in India.

"How does the magic practiced in Europe compare with that of India, professor?"

"European magic is far superior. Exaggerated reports of the wonderful things done in India reach us. The larger part of their tricks are performed in the open market places, with the help of wicker baskets and holes in the ground. I can go out here in Broadway and cut a hole in the sidewalk, and perform tricks which will collect such a crowd that the cars could not pass through, and they would not be difficult tricks, either. Perhaps you have heard of the story that a certain magician in India goes out into the market places and throws a rope into the air. This rope goes up so high that the upper end disappears in the clouds. Then the magic maker climbs up the rope until he also is lost to view. Just about the time you would naturally think he was knocking at St. Peter's gate, down comes one of his legs. The mate follows in a few moments, followed by both arms in succession. Then follows the trunk, and last the head comes eddying down from somewhere out of the infinite. After all the members of the body had reached solid ground, they quickly, and apparently of their own volition, gather themselves together, and the perfect rehabilitated man is the result. Then the magician, like the ragpicker, puts his basket under his arm and silently sneaks away. I kept a bright lookout for that fellow when I was in India, but I never saw him. Perhaps he had gone up the rope and stayed there while I was in India."—Interview with Professor Hermann.

Basque Method of Roasting Eggs.

"There is reason in roasting eggs," says an old English proverb, of which few now understand the meaning. "I think eggs are better roasted than boiled," said the Basque landlady of a country inn to me; "though I often boil them as being less trouble." Whereupon I at once got her to roast me some. A smooth place is swept on the hearth, not too near the fire; on this the eggs are deposited, then gently round them is scraped a little circular wall of hot embers. The cook busied herself about other work, but in a few minutes returned, her thumb and middle finger touch the extreme ends of the eggs, a dexterous twist, and the egg was spinning like a teetotum. That egg was done and was at once put into the folds of a clean, warm, white napkin; another was tried, but that only wabbled ungracefully. "Not cooked yet," was the verdict. The embers (braise) are raked a little closer round it and very soon it spins as well as the other and shares its fate. It looks so easy and the eggs never seem to have the least inclination to move out of their charmed circle; but let a stranger try, especially if he is a foreigner and of the masculine persuasion, and the usual result is that he is hopping about the room blowing his burnt fingers and the egg lies smashed in the middle of the floor. This is why "there is reason in roasting eggs," though it looks the easiest of all possible operations.—London Queen.

American Short Story Writers.

American authors are now admitted, even in England, to hold the foremost rank as writers of short stories, and, indeed, they seem to deserve the award thus made. Alfred de Musset was a master in this art, and Daudet has proved himself one more recently. But Musset's short stories were almost novelettes in length, compared with the short stories produced in this country; and Daudet's hardly possess the range and depth shown in the tales of Nathaniel Hawthorne, of Bret Harte, H. H. Boyesen, Mrs. Wyman, Mrs. Burnett, Sarah Jewett, T. B. Aldrich and a score of other men and women who contribute to our magazines. We seem to have developed here a condensation and refinement of style, an atmosphere full of delicate shadings and significant outlines, which belong to the finest art. Among English authors of the present day only Robert Louis Stevenson exhibits these peculiarities in the same degree, and it may fairly be said that Stevenson indulges in mannerisms in the use of language of which our native writers are seldom guilty.—New York Star Book Review.

Saluted as Washington.

The other night as I sat in the dim light of the lantern waiting for bed and bedtime to come a solemn figure entered my room, and kneeling before me struck its forehead three times to the floor, repeating at each obeisance the name "Washington! Washington! Washington!" I was, indeed, taken by surprise, but I recovered in time to reply in the same stately manner, "Nobunaga! Nobunaga! Nobunaga!" much to the evident satisfaction of the figure, which, after surveying me for some time, took leave after again repeating the name.

I was at first inclined to think this apparition of political significance predicting my speedy elevation to the presidential chair at Washington, but the girl who brought my futon (bedding, etc.) told me it was the host's son, who had read a great deal and had come to pay his compliments to me as an American.—Tokio Cor. Sacramento Record.

A Bird's Strange Antics.

The cock of the rock is, next to the crane, the bird of the western hemisphere noted for the strangeness of its evolutions. When the breeding season begins ten or twenty of the birds will form a ring, facing inward. A small bird takes its place in the center and begins to hop about, toss its head, lift its wings, and go through all the strange movements possible, which appear to be watched with great interest by the rest. When the performer is thoroughly exhausted he retires to the circle and another bird enters the ring, and so on, until all have been put through their paces, when the pairs probably make their selection. Often the birds are so exhausted after the dances that they can hardly fly, lying panting on the rocks.—Chicago News.

A Most Natural Reply.

Suppose you, the reader, were asked if you would accept the presidential nomination if tendered, your most natural answer would be "yes, if there is any prospect that I can be elected." But you never catch a prominent politician giving so plain an answer to a direct question.—Philadelphia Inquirer.

INDEPENDENCE, CAL

SATURDAY APRIL 13.....1889

Surely it was the devil who invented villages. Nothing so belittles human nature as life in a village. The subjects that occupy the average minds in a village are nearly always trifling, and only too often contemptible. Human beings grow or shrivel according to the surroundings, and the petty jealousies, mean gossip and tattle so prevalent in villages sour the milk of human kindness in many hearts, dwarf hearts than under more favorable conditions might grow to respectable proportions, and scatter the seeds of envy, malice, and all uncharitableness. The blackest crimes in human history are due to the conditions of village life. If Athens had been a great metropolis, the capital of a great Nation, instead of what it was, only the biggest village in a very small State, enough men of broad and liberal minds would have been found within it to have prevented the murder of Socrates. If the awful tragedy of the cross were yet to be enacted it could not be possible anywhere now save in a village; and it is safe to say that if the Redeemer walked the earth to-day there is not one of these places but where some human vermin could be found to run behind him and squeak "crucify him, crucify him." It requires more strength of mind, more magnanimity of temper and tenderness of heart than the average mortal possesses, to live in a village and think with the wide world and feel with all humanity. There is one remedy for the evil effects on brain and heart, upon intellect and feeling, of the paralyzing and corroding effects of ordinary village life. That remedy made Abraham great in the tent of a shepherd; Moses majestic in the palace of Pharoah, and Paul a hero in the tempest. The heart that communes with God, and the mind that forgets not eternity, can pardon, pity, and patiently endure, even life in a village.

A copy of the Ninth Annual Report of the Board of Railroad Commissioners of the State of California, for the year ending December 31st 1888, has been received. The Commissioners say that the portion of the Los Angeles and Independence railroad already completed is 16.83 miles in length. This road extends from Santa Monica to the city of Los Angeles; it is built over a level country and has no tunnels, heavy grades, or deep cuts; it was an easy road to build. The Commissioners say the cost of building the road was $417,928 39, or a little over $24,832 per mile. The cost per mile for extending the road from Los Angeles to Independence would certainly be greater than the part already built because the country to be passed over is much rougher and it is certain that a tunnel would have to be cut through the Sierra Madre Mountains. But granting that the cost should be no greater per mile, and note the result: It would require the building of about three hundred miles of road to establish connection between Los Angeles and the town of Bishop, and the cost of this would be $7,459,600. Los Angeles wants a railroad to Owens Valley and if her people are ready to put up the money to build it the people of Owens Valley are ready to say, "Barkis is willin'."

Moral Progress in Great Britain.

Some interesting statistics have recently been compiled concerning the number of criminal commitments in England by comparison with former times. It seems that thirty years ago, when the population of England and Wales was about 19,250,000, the average number of penal servitude sentences was 2,589. At the end of 1887, when the population had risen to 27,750,000, the average number was only 962. On the last day of 1869 there were 11,660 persons undergoing sentences of penal servitude in England and Wales, out of a population of 21,681,000. In July, 1888, with a population of nearly 28,000,000, the number of convicts had fallen to 6,921. This showing is justly regarded with much satisfaction by the press and those interested in the moral progress of the nation. —San Francisco Chronicle.

The Cypress Tree.

A cypress tree in Somma, Lombardy, is said to have been standing since the time of Julius Cæsar. Napoleon, in making a road over the Simplon, deviated from a straight line that he might not be obliged to cut it down. Cypress wood is very enduring, and for this reason, no doubt, it was used for mummy cases and statues. Pliny tells us a statue of Jupiter carved from cypress wood remained standing for 600 years. In Turkish cemeteries it is a rule to plant a tree of this variety at every interment. Cypanissus, a beautiful youth, was transformed into a cypress by Apollo that he might grieve all the time. The cypress is an emblem of mourning.—Vick's Magazine.

SHE KNEW.

On the front row we sat,
While her large opera hat
Quite sheltered us both from the rear,
And enabled us well
My great passion to tell
To her charmingly shell like pink ear

'Twas an opera troupe,
Where the star was a "supe,"
Ballet large and of scenery a lot.
"Now, what think you?" I said,
As the lime light shone red—
"Tout ensemble is fine, is it not?"

As I spoke came a blare
From the orchestra there;
All the brass horns were put to the test.
Ah! no Boston girl she,
With her "thiness" of "the"—
My companion came from the far west.

She said as she smiled
On the great ballet wild:
"They are gaudily dressed, no dispute;
The ensemble's intense,
And the chorus immense,
But there's far, far too much of the toot."
—Omaha World.

A Great Composer.

George Frederick Handel, although a native of Germany, being born in Halle, Saxony, on Feb. 24, 1685, passed the greater part of his life in England. Even in childhood he sacrificed his hours of play and his meals for the study of music, and at 10 years of age composed a set of sonatas that were not without value. As a composer, Handel was great in every style. In his choral works, he throws at an immeasurable distance all who preceded and followed him. Very soon after his arrival in London, in 1710, Handel attracted the attention of Queen Anne. A Te Deum and Jubilate, composed to celebrate the treaty of Utrecht, gained him a pension of £200. Handel died on Good Friday, April 13, 1759, and was buried in Westminster Abbey. The composer gave a performance of his own compositions in 1749, by which £500 were realized for the Foundling hospital, which institution received £7,000 from the annual repetition of this performance during the ten following years.—Philadelphia Times.

A Shrewd Otter.

One day as I was standing on the shore of Cranberry bog pond I saw a large flock of ducks near the middle of the pond and soon after discovered three otters in front of me, but not near enough to shoot. While watching the maneuvers of the otters they started down the pond in a straight line for the ducks. The old leader struck out lively, leaving his mates far behind, and as he neared the ducks he dived and presently I saw one of the ducks disappear beneath the surface after a considerable struggle, the remainder of the flock rising and flying away in great commotion. The otter had gone under the flock and selected a certain duck and pulled him under. A few minutes later the otter made his appearance near the south shore of the pond with the duck in his mouth.—Forest and Stream.

Improvement in Farm Tools.

We hear very little about the advance of improvement in agricultural implements and farm machinery, but that branch of the industrial pursuits of the country is keeping abreast of the times, nevertheless. The plow of twenty-five years ago is now a curiosity, and those who sold and used it cannot realize how it was made to serve the purposes for which it was manufactured. And the plow of a decade since, while perhaps not so crude, has been abandoned for a better implement. And so it is all through the list of agricultural implements and farm machinery, and in another quarter of a century it is possible that the farmer will walk no more in the cultivation of his farm.—St. Louis Globe-Democrat.

Jeffrey Very Soft Hearted.

Did I know Jeffrey? One of his qualities was to be always in love. Sydney Smith used to talk about Jeffrey's seventy-two loves, and at that time put me at the top of the list. He was certainly very adoring for a time, but he fell off in consequence of my taste for Germany and German literature, which (being completely ignorant of it) he could not bear. He wrote absurd criticisms on Goethe, whom he treated as le dernier des absurdes. But Jeffrey was kind, generous, an excellent friend and had great talents.—Saray Austin to Guizot.

When It Pinches Us.

"It is curious," remarks William Philpot, "to observe how much more enormous and outrageous we are apt to account a piece of dishonesty if we ourselves are pinched by it. I thought it sad, and a heinous thing in the land, when, the other day, a man in my neighborhood was dishonest about an insurance business. But when I discovered, afterwards, that this same man had taken a premium out of my own pocket and not paid it over, my indignation knew no bounds. Then I felt what a crime dishonesty was!"—St. Louis Republic.

His Flag of Truce.

A young man of Hawkinsville, Ga., and his "best girl" quarreled some days ago, and remained "at outs" with each other until the young man relented and began to devise some plan to "make up." He finally decided to try the effects of a flag of truce, and cutting a delicate piece of white ribbon into the shape of a miniature flag, he sealed it in a sweetly perfumed envelope and forwarded it to his fair enemy. It had the desired effect, and she at once gave him permission to cross the line and be happy again.—Detroit Free Press.

Metals in the Sun.

Of the metals discovered in the sun the most important are sodium, magnesium, barium, acalsium, zinc, copper, aluminum, nickel, chromium and iron. Many of the rarer and less known metals would also appear to be there in some abundance, judging by the facility with which their presence may be detected. Although heavier metals, such as platinum and gold, have not been seen, it by no means follows that they are absent. Their weight would prevent them being easily found by the spectroscope.—New York Telegram.

Mary Anderson's American Castle.

Mary Anderson, the actress, owns a valuable farm of 320 acres on the Lafayette township knobs, about five miles from New Albany. On the farm is a fine orchard and a building site, from which can be had a magnificent view of the Falls cities and the distant Ohio. It is said that Miss Anderson contemplates at some time erecting on the summit of the high hill a magnificent country residence, similar in style of architecture to some of the castles she saw during her stay in Europe.—Louisville Courier-Journal.

PROPOSALS FOR BOARDING INYO COUNTY PRISONERS.

Notice is hereby given that sealed proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk until Tuesday, May 7, 1889, at 12 o'clock M., for the boarding of Inyo county prisoners, for the term of one year, beginning May 10th 1889 and ending May 10th, 1890, said bids to designate the price per diem for each prisoner, and said board to be paid for by warrants drawn upon the General Expense Fund, upon bills duly verified and presented at the regular meetings of said Board of Supervisors.

Proposals must be endorsed "Proposals for Boarding County Prisoners," and the same will be opened between the hours of one o'clock and four o'clock P. M. on said 7th day of May, 1887, and the Board reserves the right to reject any and all bids. P. H. MACK, Clerk.

Proposals for Care of Indigent Sick of Inyo County.

Notice is hereby given that sealed proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk until 12 o'clock M., on Tuesday, May 7th, 1889, to contract for the care of said indigent sick for the term of one year from May 10th 1889 to May 13th, 1890, said bids to designate the amount for which parties contracting will care for said indigent sick on the basis of an average of four patients per day throughout the year, and to include all medicine, nursing, board, lodging and washing. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care.

Said contractor to care for all the indigent sick properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for, said excess to be paid for by upon allowance on presentation of bills duly sworn to, at the regular meeting of said Board immediately after said contract has expired. The average four per day to be paid for at the regular meetings of the Board on presentation of bills duly verified. All payments to be made by warrants drawn upon the Hospital Fund of said county.

The person or persons to whom said contract shall be awarded shall give a good and sufficient bond in double the sum of the contract price, for the faithful performance of said contract.

The care and management of said indigent sick by such contractor shall be at all times subject to the inspection of said Board of Supervisors, or any member thereof, or any person appointed by the Board for such purpose.

Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of one o'clock and four o'clock P. M., on the said 7th day of May, 1889, and the Board reserves the right to reject any and all bids. P. H. MACK, Clerk.

INDEPENDENCE, CAL.

SATURDAY, APRIL 13.... 1889

Mr. F. E. Russell arrived at Independence last Monday from Yolo county.

Mr. H. L. Clark started for San Francisco last Tuesday morning. He expects to return the first week in May.

Stockmen are gathering up their cattle in Owens Valley getting ready to take them to their summer range in the mountains.

Mr. L. F. J. Wrinkle, of Virginia City, has been in the Valley most of the week. He is interested in land and canals here.

John Bodle is on the way to Mojave with a big team to bring goods to Big Pine. Most of his load will be for Thomas & Hill.

Mr. L. D. Matthews, of San Francisco, was at Independence during the week. He is making a tour of Owens Valley examining land locations in the interest of parties at San Francisco.

Religious services will be held at Lone Pine next Sunday at 10:30 a. m.. Sunday school at 11:30. Preaching at Independence at 7 o'clock p. m. Sunday school at 11 o'clock a. m.

John Kensella is one of the fortunate prospectors in Palmetto District. He has taken out and shipped some rich ore and is reported to have a good claim and making money fast.

Mr. S. H. Bigland and an acquaintance arrived in the Valley last Wednesday from San Francisco. Mr. Bigland is working earnestly to get money invested in Owens Valley lands and canals.

Mr. George Hall was down from Alvord last Wednesday. He says that Conn & Trudo are working vigorously and are sending in plenty of material to get their borax works at Saline in working order.

Mr. Sam Spratt is busy getting the sawmill near Big Pine in readiness for a start. There is nothing to do beyond clearing up about the mill and getting belts and machinery ready for work. There is sure to be a good seasons work done.

Considerable quantities of goods continue to be sent from Big Pine to Conn & Trudo, at their borax works in Saline Valley. This will be an important business and will afford considerable employment for men, teams and the railroad.

Mr. J. C. Crocker, of Big Pine, says that any time it becomes necessary he will put a big team on the road to haul freight from Mojave. Mr. Crocker has no desire to compete with the teams now hauling, but wants to do all he can to help the business.

The Odd Fellows Lodge at Independence is busy preparing for its coming celebration, a week from next Friday. The Independence Silver Cornet Band has been engaged to play for the parade during the day and an orchestra of five pieces will play for the ball, in the new pavilion.

County-Surveyor McKnight is making preliminary surveys for a proposed extension of the Stevens Canal. All the land about Lone Pine could be irrigated by this extension and the cost would be comparatively light. This work has often been urged and there is now a probability that it will be done.

Good progress is being made with the well boring machine at Blackrock. To a depth of about thirty-seven feet boulders of lava were encountered; the stuff is not hard but being loose was tedious to bore through. Now the drill is in solid ground of a clay nature and the hole is going down rapidly. Two horses give power enough and the machine works well.

There are many prospectors at work in Palmetto District and already several promising discoveries are reported. The district attracted a good deal of attention away back in the '60s, but was soon neglected, and almost abandoned, until quite recently. A few of the early prospectors never lost faith in the district; they stayed with it, and these recent discoveries justify their faith.
